# JES2/MVS Compatibility

## JES2 Release:

z/OS Release	JES2 z/OS R.5 HJE7708	JES2 z/OS R.7 HJE7720	JES2 z/OS R.8 HJE7730	JES2 z/OS R.9 HJE7740	JES2 z/OS R.10 HJE7750	JES2 z/OS R.11 HJE7760	JES2 z/OS R.12 HJE7770
z/OS R5	X						
z/OS R6	X						
z/OS R7	X	X					
z/OS R8	X	X	X				
z/OS R9		X	X	X			
z/OS R10			X	X	X		
z/OS R11				X	X	X	
z/OS R12					X	X	X

IBM recommends the same level of z/OS & JES2 throughout your plex.

→ JES levels supported by a given z/OS release are same as the JES levels that can coexist in a MAS,  
See "**z/OS V1R11.0 Planning for Installation**" Ch. 4 (GA22-7504)

# Survey Questions

	Boston	Seattle
Do you use NJE in your environment?		Everyone
- BSC?	1	1
- SNA?	17	14
- TCP/IP?	15	21
Do you use RJE in your environment?	3	6
- BSC?		0
- SNA?	3	6
Do you use BDT in your environment?	0	1
Do you use JES2 driven printers?	8	3
ESCON connected printers	3	

## ■ Support for EAS for JES2 data sets

- ▶ Extended addressing space (Cylinder managed storage)
- ▶ SPOOL processing updated to support larger volumes
  - Max size SPOOL still only 1M tracks
  - Can be anywhere on volume
- ▶ JES2 checkpoint data sets support also updated
  - Max usable size is about 7K tracks
- ▶ New CYL\_MANAGED=FAIL|ALLOWED keyword on SPOOLDEF
  - **Once set to ALLOWED cannot start down level member**
    - **Even if later set to FAIL**
  - Also activates new MQTR support
- ▶ Other data sets (init deck, SPOOL offload, etc) support EAS data sets
  - No code change was needed, not linked to CYL\_MANAGED

- **Stopped capturing SPOOL UCBs to CSA**
  - ▶ Use actual (31 bit) UCB addresses for I/O
  - ▶ IBM no longer recommends SPOOL UCBs be kept below the line
    - Ensure other applications can support 31 bit SPOOL UCBs
- **Updated HASP443 message (SPOOL start failure message)**
  - ▶ Added dynamic allocation failure text to the message
  - ▶ Rolled back to z/OS 1.11 in OA31171
- **Updated HASP414 message (OBTAIN failure message)**
  - ▶ Added text explanations for obtain return codes

## ■ More MQTR exploitation

- ▶ Continued migration from 4 byte MTTRs to 6 byte MQTRs
- ▶ Variable length PDDb support
  - Preparation for future changes
  - z/OS 1.12, all PDDBs same length
  - But assembly time length PDBLENG deleted
    - Use existing run time length PDBSIZE
- ▶ SPOOL CBs changed from MTTR to MQTR
  - Based on CYL\_MANAGED=ALLOWED
  - Always MQTRs in memory
    - Translate on read/write to SPOOL
  - CHK, JCT, NHSB, and OCT affected
    - Old MTTR fields renamed with \_Z11 suffix

- **Printer information SSI**
  - ▶ Interface to get information on local and remote printers
  - ▶ Includes printer settings, status, active output
  - ▶ Supports printers on other members (for z/OS 1.11 and up)
- **Initiator query SSI supports inits on other members**
  - ▶ Enhancement to z/OS 1.11 support
  - ▶ Other members must be at z/OS 1.12 and above
- **Enhanced SYSOUT ENF processing**
  - ▶ Option to requests ENFs for data sets passed to SAPI
  - ▶ Enables more tracking of JES2 output

## ■ **TSO Notify message processing enhancements**

- ▶ Helps when multiple instances of a userid is logged on
- ▶ Prefer to send notify message to userid on member that submitted job

## ■ **Serviceability**

- ▶ Improved SAPI trace formatting
- ▶ SSOB & extension in SSI \$SAVE/\$RETURN trace records

## ■ **MTTR (Mean time to restart) statistics**

- ▶ JES2 creates new timed events data
  - Via call to IEATEDS
- ▶ Tracks initialization phases and warm start processing
- ▶ Foundation for future efforts to reduce JES2 start times
  - No changes other than gathering data

# JES2 1.12 Migration/Coexistence

- **From JES2 z/OS 1.7, 1.8, 1.9**
  - ▶ Can all member warm start z/OS 1.12
  - ▶ No coexistence support
  - ▶ Fall back implications
    - Some new data structures created by z/OS 1.11 JES2 may result in problems in z/OS 1.8 and prior
  
- **From JES2 z/OS 1.10, or z/OS 1.11**
  - ▶ APAR **OA28532** needed on z/OS 1.10 or z/OS 1.11 member to coexist in MAS with z/OS 1.12
    - PTFs - **HJE7750 - UA52850, HJE7760 - UA52851**
    - Also recommended for fall back
  - ▶ APARs **OA31703** and **OA32712** are required to correct functional problems with the new/updated z/OS 1.12 SSI interfaces

## More details on HJE7770

**Session 7525 – Tuesday 1:30 PM - z/OS 1.12 JES2 New Functions, Features, and Migration Actions**

# What's new in SDSF 1.12

- Health Checker History panel
- Enhancements to INIT panel
- Additional JES3 support (PR panel)
- Search help support
- REXX log support
- SDSF data available through JAVA

- More information on SDSF:

**Session 7502 – SDSF Product Update – Thursday 11:00 AM**

**Session 7420 – SDSF for New Users - Hands-on Lab –  
Wednesday 9:30 AM**

## ■ Transaction SYSOUT selection

- ▶ APPC, BPXAS, InfoPrint output
- ▶ Select based on transaction job name and job id
  - SAPI and Extended status
- ▶ \$JOE extended with BERTs
  - May impact CKPTSPACE BERTNUM value
- ▶ Improves SDSF APPC ON performance

## ■ Expanded limits for JQEs, JOEs, BERTs, TGSPACE

- ▶ JQEs – 400,000, JOEs – 1,000,000, BERTs – 1,000,000
- ▶ TGSPACE MAX – 132,649,472

## ■ New \$ACTIVATE level to enable new limits, trans select

- ▶ \$ACTIVATE LEVEL=z11
- ▶ Requires LARGEDS=ALLOWED or ALWAYS

## ■ Application interfaces

### ► SYSLOG Browse

- Logical data set that concatenates all SYSLOG data for one system
- Uses SPOOL data set browse to allocate data set
- New POINT RBA to locate records by record number or time
  - Faster than normal POINT
- Can only access SYSLOG created by z/OS 1.11 JES2
  - Does not need \$ACTIVATE

### ► New JES Properties SSI

- Node, SPOOL, JesPlex, Job Class, and Initiator information
  - Includes WLM initiator information

## ■ New JOB level ENF 70

### ► Tracks job phase changes

## ■ \$S SPOOL support to allocate (create) SPOOL data set

- New SPACE= keyword to indicate size
  - SPACE=(CYL|TRK|MAX,nnnnnn)

# JES2 z/OS 1.11 - HJE7760

- **BERT shortage processing (OA25562 plus)**
  - ▶ APAR corrected some bugs and added messaging
    - New \$HASP052 message every 30 seconds
    - \$HASP050 message issued on all members
    - Processing stops when BERT shortage (Updated with OA32216)
      - SYSOUT and batch jobs, then STCs and TSO logon
  - ▶ z/OS 1.11 added new limp mode
    - Identified by \$HASP051 message (repeated with OA32636)
    - Mostly happens at startup (guarantee JES2 will start)
    - JES2 is NOT functioning normally
      - Duplicate job processing not functioning
      - WLM initiators may not work
    - Must fix BERT shortage and restart JES2

# JES2 1.11 Migration/Coexistence

---

## ■ From JES2 z/OS 1.7 or 1.8

- ▶ Can all member warm start z/OS 1.11
- ▶ No coexistence support
- ▶ Fall back implications
  - Some new data structures created by z/OS 1.11 JES2 may result in problems in z/OS 1.8 and prior

## ■ From JES2 z/OS 1.9 or z/OS 1.10

- ▶ APAR **OA25093** needed on z/OS 1.9 or z/OS 1.10 member to coexist in MAS with z/OS 1.11
  - PTFs - **HJE7740 - UA46530, HJE7750 - UA46531**
- ▶ APAR also highly recommended for fall back as well
  - Some new data structures created by z/OS 1.11 JES2 may result in problems if OA25093 is not installed.

# JES2 Service Information

## ■ HiPer APARs (Hi Impact, or Pervasive)

► See PSP buckets for an up-to-date list - ZOSV1Rx / JES2

<http://www14.software.ibm.com/webapp/set2/psp/srchBroker> (DEPRICATED)

yy/mm/dd	APAR	COMMENTS
10/08/13	OA32799	ABEND068 RC108 HASPCKVR checkpoint versions subtask terminates
10/08/13	OA32292	SPOOLs used mask not updated properly at hot start

09/08/31	OA29374	Jobs hang in conversion due to SYZTIOT contention
09/08/28	OA29531	POINT failure pointing to the end of SYSLOG browse data set
09/08/28	OA28856	Extened status performance improvement when using filters
09/08/21	OA29470	Various errors in z/OS 1.11 JES2
09/06/26	OA25320	SRB scheduling keeps dispatching priority high for batch job
09/06/19	OA26243	NJE over TCP/IP connection hangs after other member crashes

# SDSF Performance APARs

## Problem **Performance problems with extended status SSI**

- Could affect any user of SSI 80

- ## Fixes
- OA33725 – PE fix for OA33063 (Extended status requests under initiator causes ABEND)
  - OA33063 – High CPU for terse and verbose requests and with large numbers of DESTIDs/NODEs
  - OA31565/OA31571 – High CPU due to linkage stack and extra queue scan
  - OA28856/OA28918 – Problems when filters are active
  - OA27885 – PE fix for OA24615
  - OA26013 – Job position value
  - OA24615 – Excessive CPU returning WLM queue Position
  - OA25498 – Poor performance returning information for a large number of jobs/SYSOUT

# SDSF Performance APARs

Problem

**SDSF fixes related to performance**

Fixes

- PM18941 – PE fix for PM01352 (exclude list)
- PM01352 – OUTPUT panel performance
- PK87391 – DA panel performance problems
- PK86058 – STATUS filtering performance
- PK82936 – Purging jobs with lots of output
- PK81154 – HELD panel delays reading CHKs
- PK52910 – HELD panel performance with APPC on

# OA33407 – SAPI/Printer Performance Problem

**Problem** → **High CPU when printers/SAPI select on user routecode**

- ▶ SAPI/Printer get posted to select work when nothing to select
- ▶ Device does a selection and then goes to sleep
- ▶ Happens when select on user destination (eg FRED)

**Avoid!** → **Selecting on user destinations without fix**

**Fix** → **JES2 z/OS 1.11, 1.12**

# OA32636 – Improved HASP050

**Problem** → **\$HASP050 message issued when over threshold and percent usage changes**

- ▶ When at 100% usage, percentage does not change
- ▶ Message is missed when usage is very high and not changing

**Change** → **\$HASP050 message issued every 30 second when 99% utilization or greater even if percent usage does not change**

**Fix** → **JES2 z/OS 1.9, 1.10, 1.11, 1.12 – F006**

## OA23689 - Unable to Warmstart - no \$BERTs

**Problem** → After JES2 runs out of \$BERTs, JES2 restarts but ABENDs with \$DP3.

- ▶ Customer had to COLD Start after trying to WARM/HOT START...
- ▶ There must be a way for JES2 to come up so that \$BERTs can be added to avoid Cold Start.

**Avoid!** → **Moral: Don't run out of \$BERTs!**

- JES2 - all current releases . . .
  - ▶ (Fixed in future release)
- See also OA25562 (F808)
  - ▶ (Will highlight shortage messages.)
- **Again: Don't run out of \$BERTs!**

## OA32216 - Unable to Warmstart - no \$BERTs

**Problem** → MISC processor waiting for BERTs to update CAT and WSC counts

- ABEND \$QG1 due to wait for BERTs in exit 49
- Unable to warm start in z/OS 1.9 and 1.10

**Change** → BERT threshold added in OA23689 increased

- 2x max for JQA plus 2x max for CAT plus max for WSC
- 48 for z/OS 1.9 and 1.10, 50 for z/OS 1.11 and 1.12

**Avoid!** → **Again: Don't run out of \$BERTs!**

**Fix** → **JES2 z/OS 1.9, 1.10, 1.11, 1.12 – F006**

# OA32333 – Problems when OUTTIME=UPDATE

**Problem** → **SAPI tracking of “don’t show” attribute for  
JOE incorrect if OUTDEF  
OUTTIME=UPDATE**

- ▶ JOEs re-presented to application inappropriately
- ▶ SAPI application may have unpredictable error

**Avoid!** → **Using OUTDEF OUTTIME=UPDATE**

**Fix** → **JES2 z/OS 1.11 and 1.12 – F006**

# OA33032 – SDSF PREFIX Filtering with Transaction Output Incorrect

---

**Problem** → **SDSF PREFIX filtering (O and H) not matching transaction output in z2 CKPT mode**

- ▶ Extended status not returning transaction jobs as requested
- ▶ Some performance problems may be noticed in z11 mode

**Avoid!** → **Transaction filtering in SDSF in z2 mode**

**Fix** → **JES2 z/OS 1.11 and 1.12**

# OA32089 – New Message for Automatic/Init Command

**Problem** → **Commands from Init Deck and automatic commands are not echoed to the console**

- ▶ If there is a syntax error, it is hard to determine the source
- ▶ Command responses without command echo in SYSLOG can be confusing

**Change** → **Issue HASP249 message to echo command**

- ▶ Indicates source is “initialization” or “auto command id=xxx”

**Fix** → **JES2 z/OS 1.9, 1.10, 1.11, 1.12**

# OA31837 – SPOOL Read SSI

## Problem ■ **SPOOL read SSI call fails to fetch data**

- ▶ Asking for instorage buffers
- ▶ Request data from non-local member then local
- ▶ Does not release storage between requests
- ▶ Local request set to last non-local member

## Avoid! ■ **Mixing local and non-local SPOOL read requests without cleaning up storage**

## Fix ■ **JES2 z/OS 1.11 – F002**

## **Command performance with multiple filters**

- ▶ Filter optimization not working with more than one filter
- ▶ Problem introduced in z/OS 1.5
- ▶ More filters cause more problems
- ▶ Put filters most likely not to match first

## **Using multiple filters against large job range**

- ▶ Split commands to have less jobs/JOEs per command

## **JES2 z/OS 1.9, 1.10, 1.11 – F005**

# OA31671 – R= command filter

## Problem → Output command filters fail to find match

- ▶ ROUTECDE=/DEST= filters
  - \$CO, \$DO, \$O, \$PO, and \$TO
- ▶ Filter contains generics
- ▶ Command does not do what is requested

## Avoid! → Commands that use generic route cde

- ▶ Eg. \$PO JQ,Q=T,R=MMA250Y\*,PROT

## Fix → JES2 z/OS 1.11 – F002

# OA31557 – ABEND on retroactivate

**Problem** → **ABEND \$IV8 \$ACTIVATE LEVEL=Z2**

- ▶ Highest JQE defined is in use
- ▶ JQE is not properly reset
  - \$ACTIVATE notices problem and ABENDs
- ▶ Impacts ability to fall back to z2 mode

**Avoid!** → **\$ACTIVATE LEVEL=z11 without fix**

**Fix** → **JES2 z/OS 1.11 – F002**

# OA31479/OA31480 – ABENDs after PSO request

---

## Problem → **PSO request to alter held SPIN JOE**

- ▶ TSO OUTPUT command
- ▶ Modify user portion of DEST, writer name, forms
- ▶ Various ABENDs can occur
  - Depending on \$ACTIVATE level

## Avoid! → **Altering SPIN JOEs with PSO (TSO OUTPUT)**

## Fix → **JES2 z/OS 1.11 – F001**

# OA31330 – SNA RJE ABEND 0C4

**Problem** → **ABEND 0C4 AUTOLOG a SNA RJE**

- ▶ Must be last/highest RJE defined
- ▶ RJE table ends on a page boundary

**Avoid!** → **Reducing number of RJE's defined**

- ▶ TPDEF RMTNUM
- **Define extra RJE's if last RJE is AUTOLOG**

**Fix** → **JES2 z/OS 1.9, 1.10, 1.11 – F001**

# OA30164 – S&F even when DIRECT=YES

**Problem** → **NODE(x),DIRECT=YES does not always work**

► In some cases NJE uses store and forward

**Avoid!** → **Depending on DIRECT=YES**

**Fix** → **JES2 z/OS 1.9, 1.10, 1.11 – F910**

# OA29977 – ARM restarts delayed

## Problem **Missing call to cleanup for new XCF group**

- ▶ Group added in OA20935 (PE)
  - Compatibility APAR for z/OS 1.10
- ▶ Restart delayed for 2 minutes

## Fix **JES2 z/OS 1.8, 1.9, 1.10, 1.11 – F909**

# OA29854 – FSS recovery Incomplete

## Problem **FSS recovery not always attempted**

- ▶ Results in FSS printer being ENDED
- ▶ Problem introduced with OY04761
- ▶ Also may have fixed original reason recovery entered

## Fix **JES2 z/OS 1.9, 1.10, 1.11 – F912**

# OA29803 – WLM service class incorrect in SMF 26 record

---

## Problem → **SMF 26 field SMF26WCL incorrect**

- ▶ Should be service class when job ended
- ▶ Instead is initial service class
  - Original service class in SMF26WOC

## Fix → **JES2 z/OS 1.9, 1.10, 1.11 – F908**

# OA28712 - 255 BYTE CSA OVERLAY

**Problem** → A random overlay of up to x'100' bytes of CSA storage may occur for a SWB modify function of SSI 70.

- ▶ Error based on amount of data passed on request
- ▶ **CAN IMPACT ANY USER OF ECSA**

**Avoid!** → SWB modify with large amounts of data

- ▶ SDSF Q panel

**Fix** → JES2 z/OS 1.9, 1.10, 1.11 – F905

# OA23615 - Red Alert - Spool data loss

## Problem

**Potential SPOOL data loss when IPLing z/OS 1.9 member with any spool volumes in draining status.**

- ▶ JES2 DISASTROUS ERRORS (DISTERRs) such as CBIMPL4 and CBIMPL12 DISTERRs will occur as JES2 processes jobs on the affected volumes; these jobs and their data will be lost.

## Fix

**Install on all 1.9 systems (one at a time)**

- ▶ **PTF UA39330 (PUT F802)**

## Avoid.

**If you need to IPL a z/OS 1.9 member:**

- ★ **Make sure no Spool volumes are Draining or HALTING - issue the \$DSPL command.**
- ★ **Issue \$SSPL(volser) to make them Active before you IPL z/OS 1.9.**
- ★ **Do NOT Issue \$SSPL(volser) if you have already IPLed a z/OS 1.9 member. Contact JES2 Level 2 for assistance.**

# Trial and tribulations of \$HASP150

- **OA10772 – MSGHASP150 will only display 3 digits of the JOEID1 value**

► \$HASP150 CICSPBR2 OUTGRP=48593.123.1 ON R6155.PR1 6 (6) RECORDS

- **Real “fix” incorporated into z/OS 1.8**

And then....

- **OA22397 – Wrong JOBID placed in \$HASP150 message**
- **OA23776 – MSGHASP150 incorrectly sent to PSF JOBLOG**
- **OA26451 – HASP003 RC=(28),ERROR BUILDING MESSAGE HASP150P on JES mode 3800 printers.**
- **OA29284 – \$HASP150 Message to remote RJE console contains bad text**

# Monitor for NJE/TCP updates

## IBMLINK ASAP monitoring function for NJE/TCP and common JES functions.

- If you are monitoring the JES2 FMID for HiPer APARs, you may be missing notification of NJE/TCP issues, and other JES Common Functions under CompID 5752SC141 (BCP's FMID.)
  
- ASAP tracking is by FMID, so your ASAP profile should monitor the BCP's FMID:
  - ▶ z/OS 1.9 BCP: HBB7740
  - ▶ z/OS 1.10 BCP: HBB7750
  - ▶ z/OS 1.11 BCP: HBB7760
  - ▶ z/OS 1.12 BCP: HBB7770

# \$D PERFDATA service aid commands

(undocumented - intended for service personnel - subject to change ??)

■ [www.ibm.com/support/techdocs/atsmastr.nsf/WebIndex/FLASH10008](http://www.ibm.com/support/techdocs/atsmastr.nsf/WebIndex/FLASH10008)

- **\$D PERFDATA(INITSTAT)** - JES2 initialization routines
- **\$D PERFDATA(QSUSE)** - Checkpoint delays
- **\$D PERFDATA(PCESTAT)** - PCE detailed statistics
- **\$D PERFDATA(CPUSTAT)** - Summary of PCE stats
- **\$D PERFDATA(SAMPDATA)** - WLM init sampling data
  - See also JES2 \$TRACE(41) - added in z/OS R.8
- **\$D PERFDATA(EVENT)** - JES2 internal errors & delays
- **\$D PERFDATA(CKPTSTAT)** - JES2 Checkpoint Performance
  - See also JES2 \$TRACE(17)
- **\$D PERFDATA(SUBTSTAT)** - JES2 Subtask Performance

# Implementing JES2 NJE over IP . .

## ■ On WSCPlex (WSC175):

```
/* ----- */
/* JES2 NJE/TCP DEF's FOR WSC175
/* CONNECTING TO NODE WSC180) */
/* ----- */
LINE(1-5) UNIT=TCP
SOCKET(W175J2) NODE=175
SOCKET(W180J2) NODE=180,
                IPADDR=9.82.24.150
NETSRV1 SOCKET=W175J2
```

## ■ On WSCZPlex (WSC180):

```
/* ----- */
/* JES2 NJE/TCP DEF's FOR WSC180
/* CONNECTING TO NODE WSC175) */
/* ----- */
LINE(1-5) UNIT=TCP
SOCKET(W180J2) NODE=180
SOCKET(W175J2) NODE=175,
                IPADDR=9.82.24.69
NETSRV1 SOCKET=W180J2
```

## ■ Using Operator Commands (same on both sides):

- 1 Convert one or more LINEs from SNA to TCP (\$TLINE)
- 2 Add Socket for local system (\$ADD SOCKET)
- 3 Add Socket for remote system (\$ADD SOCKET) with IPADDR=
- 4 Create NETSRV A/S (\$ADD NETSRV)
- 5 \$S NETSRV1 -- this creates a new A/S named JES2Snnn
- 6 Add RACF STARTED profile - assign a user with an OMVS segment:  
-RADD JES2S\*. \* CLASS(STARTED) STDATA(USER(OMVSUSER))
- 7 &SN,S=WSCxxxJ2

- Pretty seamless - looks, feels and performs as any other NJE connection.

# More JES2 Address Spaces with TCP/IP

## ■ **NETSERV Address Space for JES2 NJE-TCP/IP:**

- ▶ **\$S NETSRVnnn** - ASCRE for network server address space
  - Uses IAZNJTCP command (Runs SUB=MSTR)
- ▶ Address space name is '**jesxSnnn**' .. Example: JES2S001
  - .. jesx = subsystem name .. nnn = NETSRV number

## ■ **You may have 5(+)Address Spaces for (each) JES**

- ▶ JES2 - Primary Job Entry Subsystem
- ▶ JES2AUX - Auxiliary address space to manage JES2 Data Spaces
- ▶ JES2MON - JES2 address space (Health) monitor
- ▶ JES2S00n - TCP/IP Network server address space for NETSRV(n) \*\*
- ▶ JESXCF - JES Common Coupling Services address space (only 1/LPAR)

## ■ **Make certain you have STARTED Profiles for all**

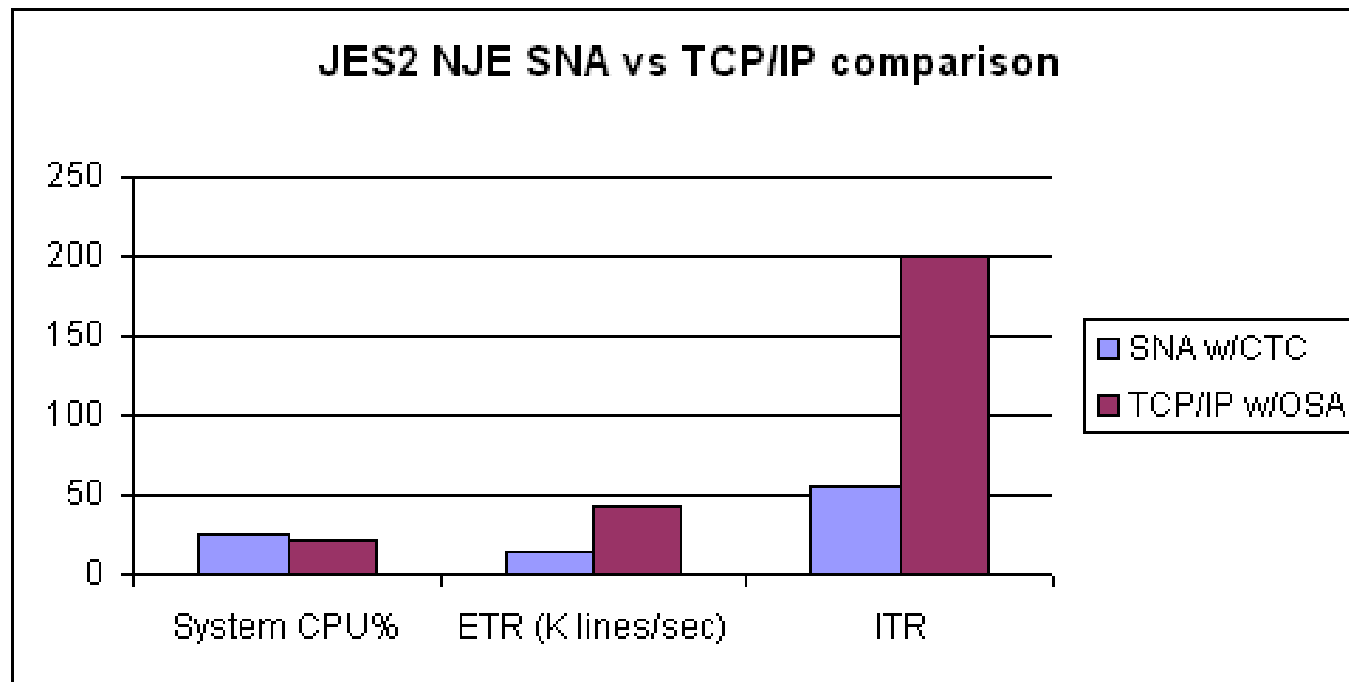

- ▶ **STARTED profiles for ASCRE started tasks is:** <job\_name>.<job\_name>
- ▶ UserID for NETSRV A.S. must have a valid OMVS segment.
  - **See OA19215 (no special UID or privileges)**
- ▶ See APAR OA19677 - NETSERV Loops on a UP if higher DP than JES2

# NJE Performance Comparison: TCP/IP vs. SNA

## ■ Lab Measurements show Faster transfer with Less cycles!

- ▶ CPU utilization: reduced by 15% with TCP/IP.
- ▶ ETR: 3x improvement with TCP/IP.
- ▶ ITR: 2.8x improvement in transfer rate with TCP/IP.
- ▶ ET: 2.5x improvement 4 lines vs. 1 line with TCP/IP.
  - More than 4 lines did not show any additional benefits in their testing.

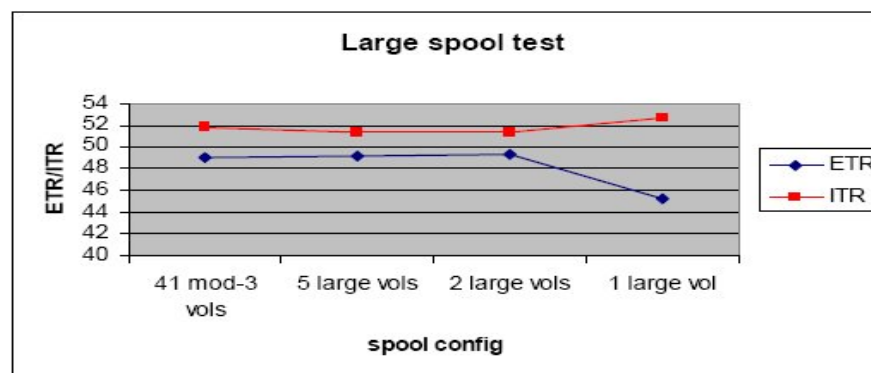

# Large Spool Volume Performance Comparison:

## ■ Lab Measurements show ....

- ▶ Reduced number of spool volumes from 50 defined to 2 large spool volumes without any performance impact.
- ▶ With only 1 spool volume there was a performance impact:
  - All spool I/Os written to one queue per spool volume (1 vol. = one queue.)
  - Only one I/O operation active on the volume per address space.
  - V1.8 JES2 increased to two I/O operations per spool volume.
    - **Re-tested shows no degradation with one spool volume.**
- ▶ Large spool volumes allows for consolidation.
  - Watch I/O activity on spool volumes to make sure you don't consolidate too much and impact the performance.

# JES2 1.8 posts other members when jobs are eligible to be run.

---

JES2 1.8 uses JESXCF to post other members when jobs are eligible to be run.

- ▶ "Pitcher" notifies eligible members when jobs are placed on the execution queue.
- ▶ "Catcher" will access the queues if there are idle initiators, and MINDORM has expired.
- ▶ This code rolled back to JES2 1.7.

## Notes

- ▶ Inactive members with idle initiators will acquire the Checkpoint closer to MINDORM, when jobs are added to the queues.
- ▶ You may be able to increase MASDEF Max. DORMANCY parameter without missing job selection opportunities.

# OS/390 & z/OS JES2 Releases

- **OS/390 Release 1** - Spool Offload Enhancements
- **OS/390 Release 3** - SYSOUT API (SAPI)
- **OS/390 Release 4** - WLM Inits, SCHENV & Constraint Relief
- **OS/390 Release 5** - Open Print Server Support
- ▶ **OS/390 Release 7** - FiCon & New DASD Support
- ▶ **OS/390 Release 8** - CF Auto Rebuild for Checkpoint Structure
- ▶ **OS/390 Release 10** Spool Mgmt, Browse, ZAPJOB,...
- ▶ **z/OS Release 2** - >64K jobs, Spool, Proclib, etc. relief ...
- ▶ **z/OS Release 4** - Health Monitor, Usability, RAS, ...
- ▶ **z/OS Release 5** - Multilevel Security
- ▶ **z/OS Release 7** - Large SPOOL Vols, NJE over TCP/IP
- ▶ **z/OS Release 8** - Batch WLM Management, Checkpoint recovery
- ▶ **z/OS Release 9** - SSI APF Mitigation ...
- ▶ **z/OS Release 10** - Dynamic Exits, NJE monitor
- ▶ **z/OS Release 11** - Transaction selection, >200K jobs, SYSLOG browse
- ▶ **z/OS Release 12** - EAS SPOOL/CKPT, Printer info SSI
