

# z/OS Performance Monitoring Tools Shoot-Out: MainView for z/OS from BMC Software, Inc.

Keith E. Moe  
BMC Software, Inc.

August 5, 2010

**SHARE** in Boston

# MainView for z/OS

- MainView is a family of monitoring products
  - z/OS
  - Data Base (DB2, CICS, IMS)
  - Storage Management
  - UNIX System Services (OMVS)
  - MQ
  - z/Linux
- Accessible via:
  - TSO
  - VTAM connection
  - Web Browser

# MainView for z/OS

## Conventional Performance Monitoring

- Performance Monitor of major z/OS functions/components
  - Jobs
    - CPU usage, I/O, Delays, zIIP/zAAP usage
  - Devices (Tape and DASD) and Processors
    - Activity, Response time, Delays, Utilization
  - Workloads
    - Service and Report Classes, Enclaves, etc.
  - LPAR Utilization
  - Storage
  - Enqueue Contention
  - Etc.
- Historical data recorded and viewed interactively

# MainView for z/OS System Programmer Tools

- Security
- MVScope Tracing
- Address Space TCBs
- Job Actions
- SYSPROG Services
- Common Storage Monitor
- Self Monitoring

# MainView for z/OS Security

- All functions have security definitions
- Default Rules (Profiles) assigned to every function
  - Installation can for each Rule:
    - Enable
    - Disable
    - Change
- Installation Security System must be updated
  - Limit scope of who can do what
  - Out of the box with no Profiles, most functions prohibited
  - Could end up with 100s of Profiles, so use generics

# MainView for z/OS MVScope Tracing

- Traces
  - Address Spaces
  - I/O Activity
    - CCWs
    - Data read or written
- Designed for short term tracing (a few minutes)
  - Not a substitute for more comprehensive products
- Will identify Load Module, CSECT, and offset
  - STEPLIB, Link List, LPA, Nucleus

# MainView for z/OS MVScope Screen – Storage Map/CPU use

```

S - Select service panel
E - Execute service
Valid COMMANDs are: TARGET - SJSD
L - Locate a service in the list
service - Execute a service
MENU == RXMAIN
-----
Service Parameters Description
-----
ALLOCATE           Marks device as allocated and online
APF                List current APF datasets and volumes
ASM               Display auxiliary storage manager data
ASVT              Display address space vector table information
AUTHTSO           Display/Build TSO lists from IKJTSOxx
BBXS              Display information for BBX
CDE               List information about loaded modules
CLEAR             Clear system dump datasets
COMMAND           Issue an MVS command from the System Console
CONSOLES          Display MCS console buffer usage
CPU               Display CPU usage by job
CSA               Display system usage of csa
CSMON             Display Common Storage usage by address space
CTCB              Abnormally terminates the task you select
DEALLOC           Marks device as deallocated
DEVIATN           Display configuration deviation
DONTSWAP          Make an address space non-swappable
DSNAME            Display dataset attributes and volumes
DUMP              Display the contents of main storage
DVIEW             View DASD cchhr/dsn/dscb/extents/files/label
EDTINFO           Display EDT information
ENQUEUES          Displays enqueue information
EQUATE            Define symbols for use with the dump service

The ZAP service may be used to alter the contents of storage and
memory objects in any address space.
You may use any expression in the "Exprs." field that resolves to the
desired target location.  An asterisk may be used in the "Exprs."
field to refer to the location last displayed by the DUMP service.

Exprs.  ==>                    (location to alter)
Verify  ==>                    (Data to be verified)
Replace ==>                    (Data to be stored)
Jobname ==>                    (Address space/ID)

Press ENTER to execute service
END to cancel request
