

Macro Trends

And What To Do About It

Jeff Jonas, IBM Distinguished Engineer
Chief Scientist, IBM Entity Analytics
JeffJonas@us.ibm.com

August 2, 2010

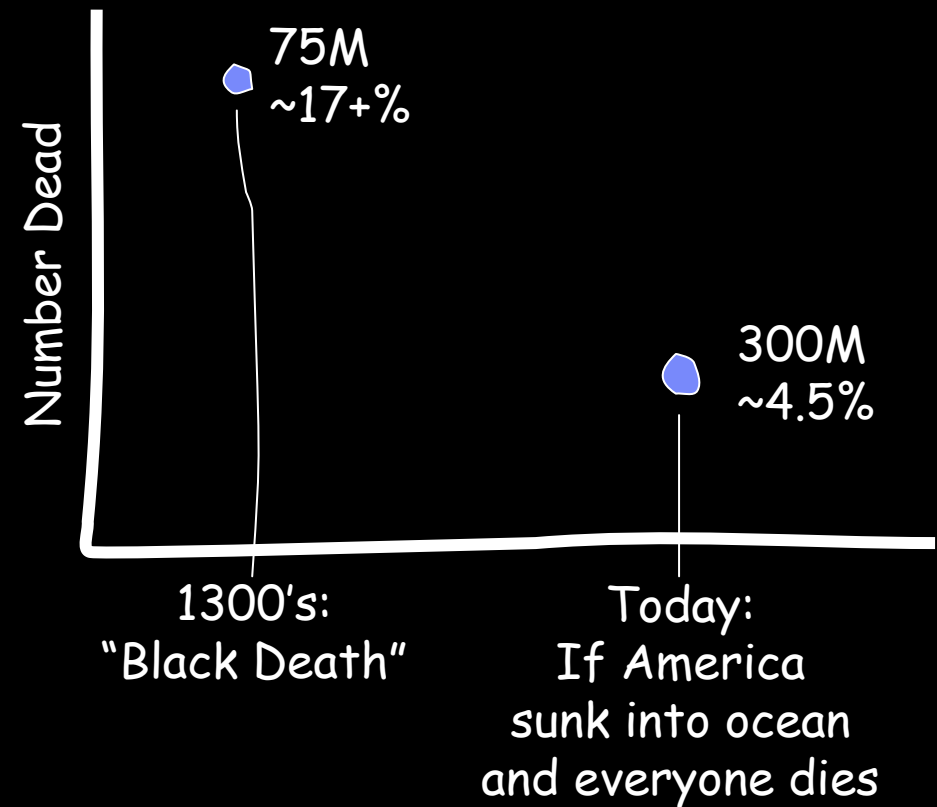

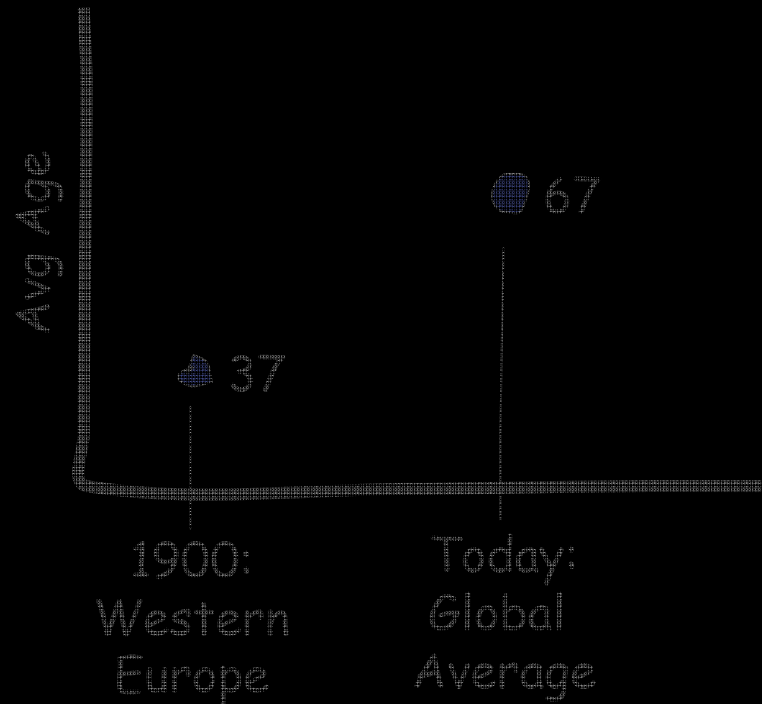

Background

- 1983: Founded Systems Research & Development (SRD)
- 1992: Assisted Vegas casinos in detecting the subjects of interest - resulting in a technology known as Non-Obvious Relationship Awareness (NORA)
- 1996: Created an identity-centric customer repository based on 4,200 disparate systems ... >100 million resolved identities
- 2001: First technology funded by In-Q-Tel, the venture capital arm of the CIA
- 2003: Demoted self, hired a CEO
- 2005: SRD acquired by IBM, now Chief Scientist, IBM Entity Analytics
- Today: Focus is in the area of 'sensemaking on streams' with special attention towards privacy and civil liberties protections

"The data must find the data ... and the relevance must find the user."

Macro Trends

Good News: The World is Not More Dangerous

2050 Prediction

Your doctor is 102
and this is not weird.

Circle of Trust

You ↓

State of the Union:
Enterprise Amnesia

Information in Isolation

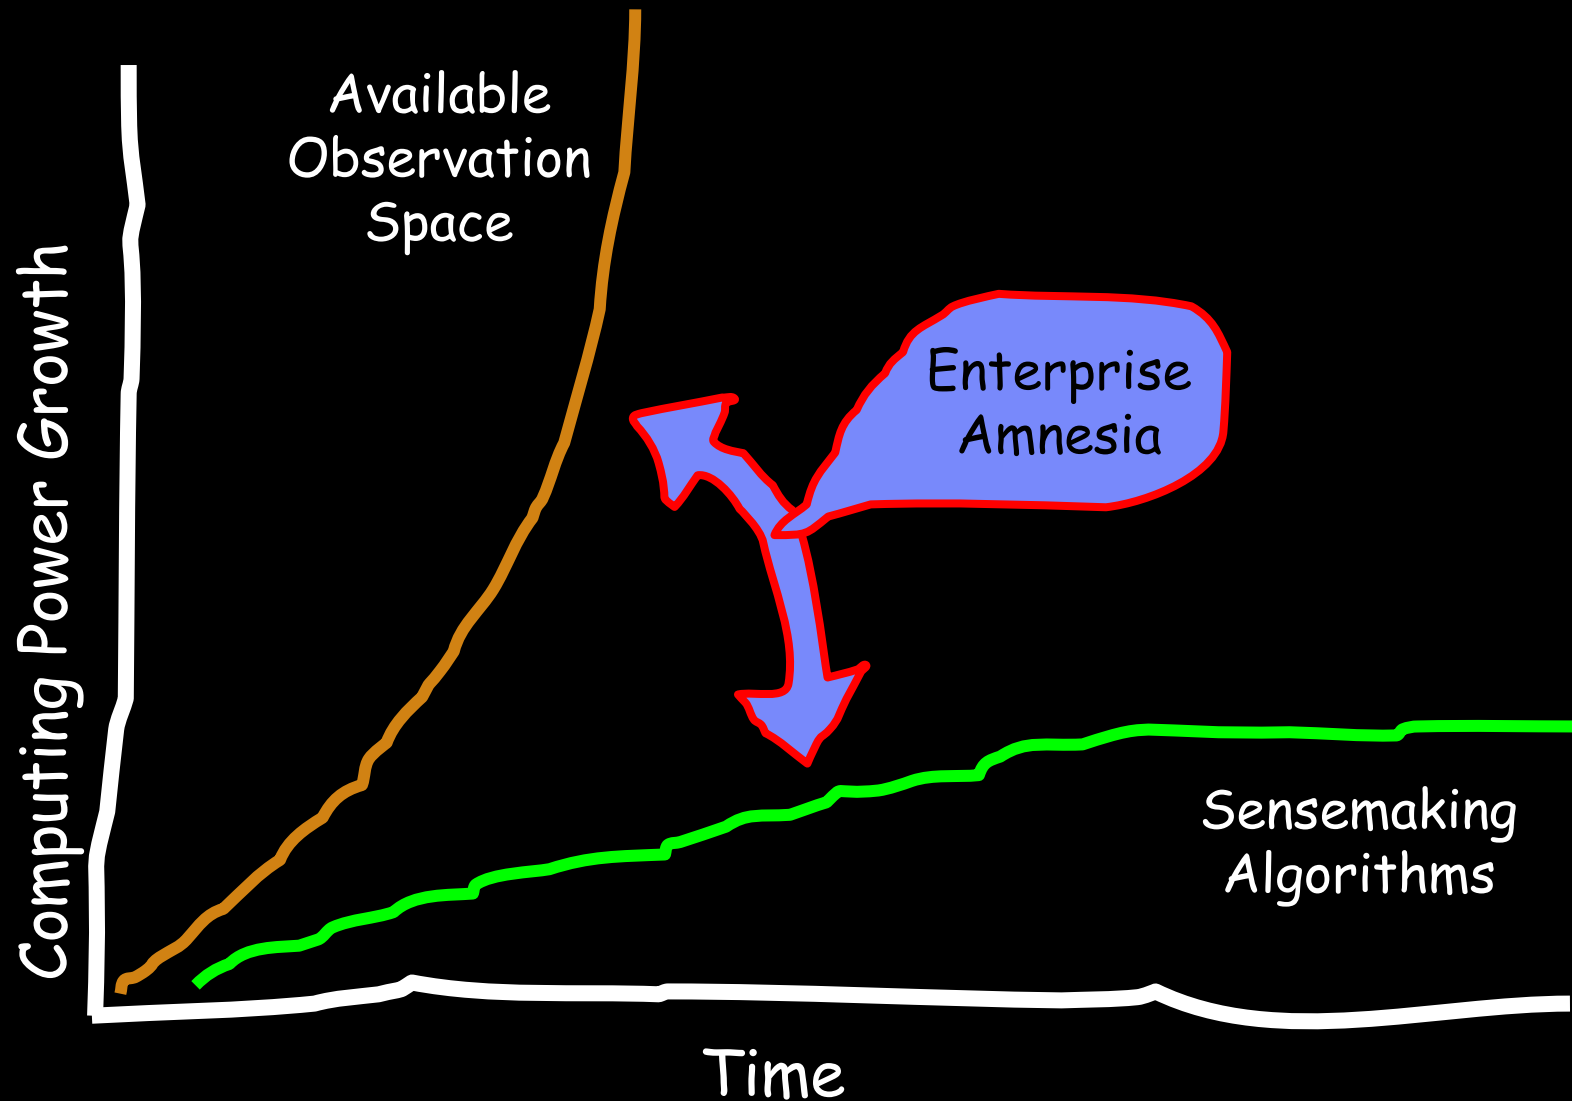

The newly hired employee had previously been arrested for stealing from you ... same store!

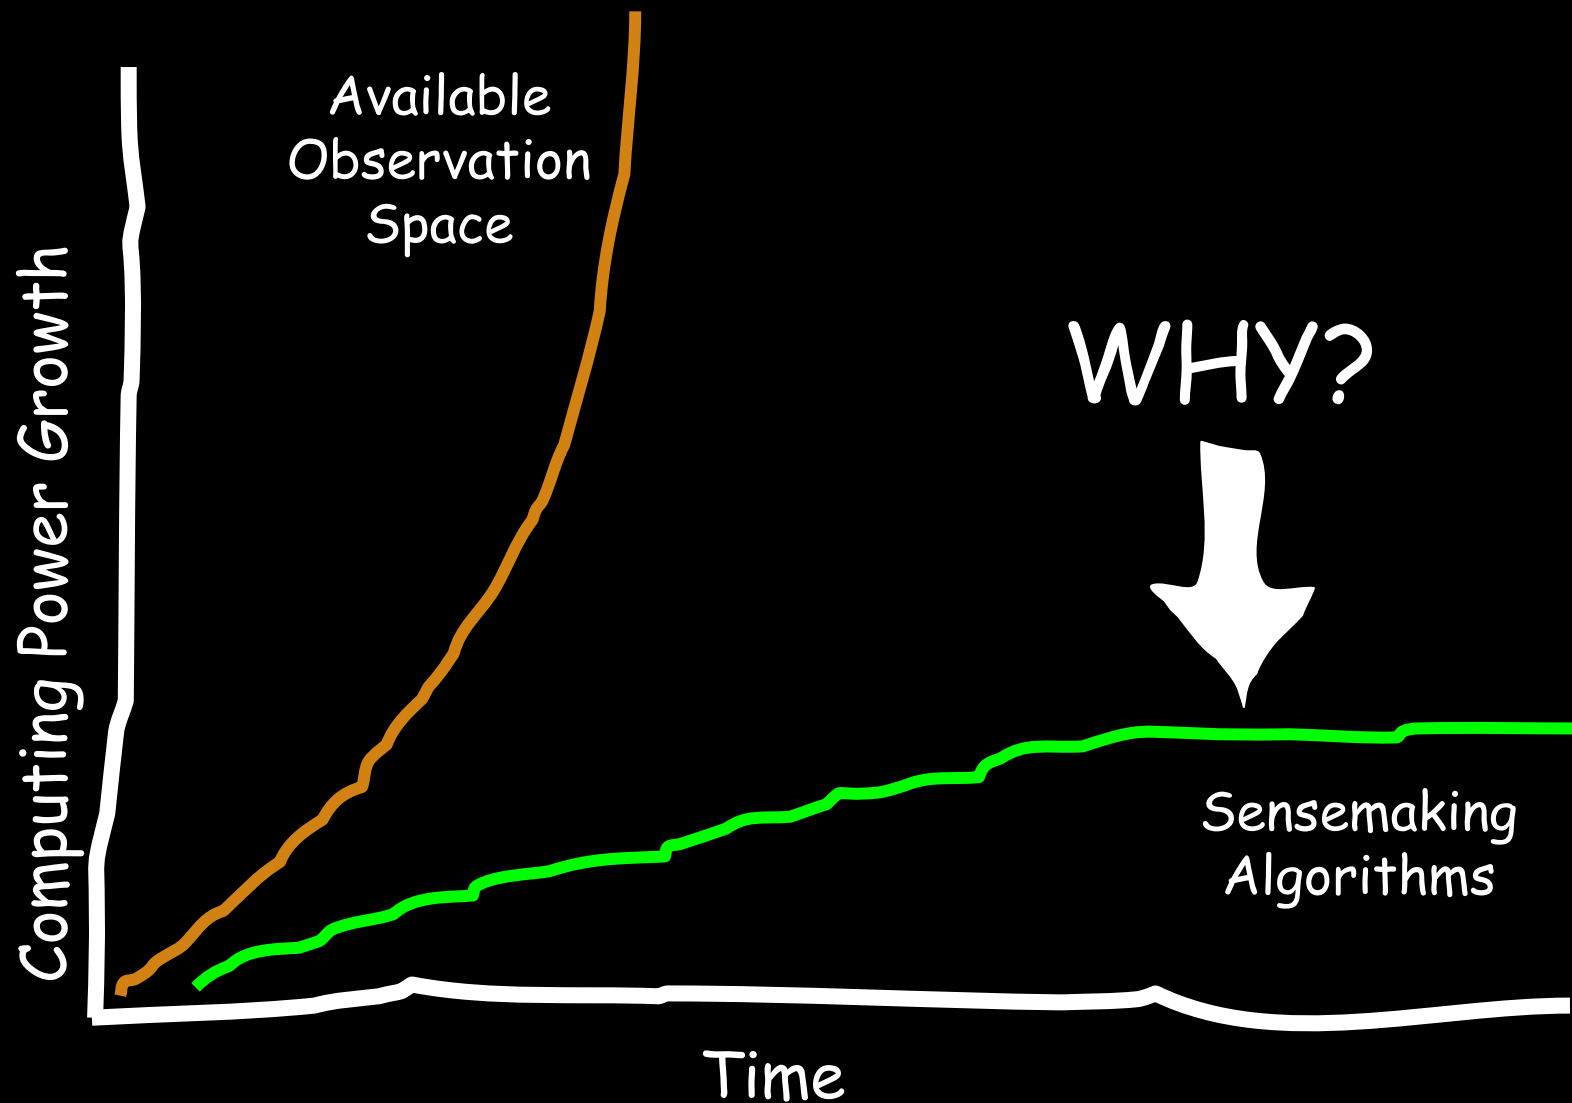

Amnesia is Embarrassing

Amnesia is Expensive

Trend: Organizations Are Getting Dumber

Trend: Organizations Are Getting Dumber

Algorithms at Dead End.

You Can't
Squeeze Knowledge
Out of a Pixel.

What If, When Considered In Context ...

- Fire in a fireplace
- Next to a tank of propane
- With a baby gnawing on the tank
- A scene in a framed picture, c.1984

Newsletter Subscription - No Context

scrila34@msn.com

Information without
context

is hardly actionable.

Lack of Context - Consequences

- Risk mitigation
 - Alert queues growing faster than the humans address
 - The top item in the queue is not the most relevant item
 - Items require so much investigative effort - they are often abandoned prematurely
 - Risk assessment becomes the risk
- Maximizing opportunity
 - Perfect cross-sell and up-sell opportunities missed
 - Best customers often go unrecognized (and they notice)
 - Customers are reminded of the movie "Ground Hog Day" when they interact with your company
 - Inefficient and expensive, sometimes very

Context Accumulation

Context, definition of:

*Better understanding
something by taking into
account the things around it.*

Context Construction ... Requires Feature Extraction

LP#: "Not Cop"

Douglas William Barr, Sr.

Barr is considered a career slot cheat who has shown no source of legitimate income for most of his adult life. He has been arrested over 150 times for a wide range of offenses with a great deal of them being for gambling offenses. Since being excluded, Barr has been arrested on these occasions for entering casinos in Laughlin, Nevada. He is currently wanted by the Gaming Control Board.

Name Douglas William Barr, Sr.				Aliases Gene Barr, Donn Pinsonne, Royce Butler, Robert Lee Edwards			
Sex M	Race W	Height 68"	Weight 165	Hair Brown	Eyes Gray	Build	Other Characteristics
Date of Birth March 11, 1936				Place of Birth Cleveland, Ohio			
Last Known Address 3755 North Nellis Boulevard, No. 174 Las Vegas, Nevada							

Douglas William Barr, Sr.
Gene barr, Donn Pinsonne
Royce Butler, Robert Lee
Edwards
DOB: 11 Mar 1936
POB: Cleveland, Ohio
Add: 3755 N. Nellis Blvd

Some Pieces Just Don't Relate ... (yet)

Luckily ... Observations Add Up

"Not Cop"
Doug Barr, Sr.

Context Accumulation: Think Pixels to Pictures

- An assertion is made with the arrival of each new piece (connects, near like neighbors, or un-associated)
- Assertions favor the false negative
- New connecting pieces ... create new entities that are re-evaluated against previously observed entities
- Some pieces produce novel discovery
- New pieces sometimes reverse earlier assertions
- Working space quickly begins to exceed the final size
- There can come a tipping point - a collapsing of the working space

False Negatives Overstate the Population

Counting Is Difficult

Mark Smith

File 1

File 2

Counting: Degrees of Difficulty

The Rise and Fall of a Population

Observations Add Up

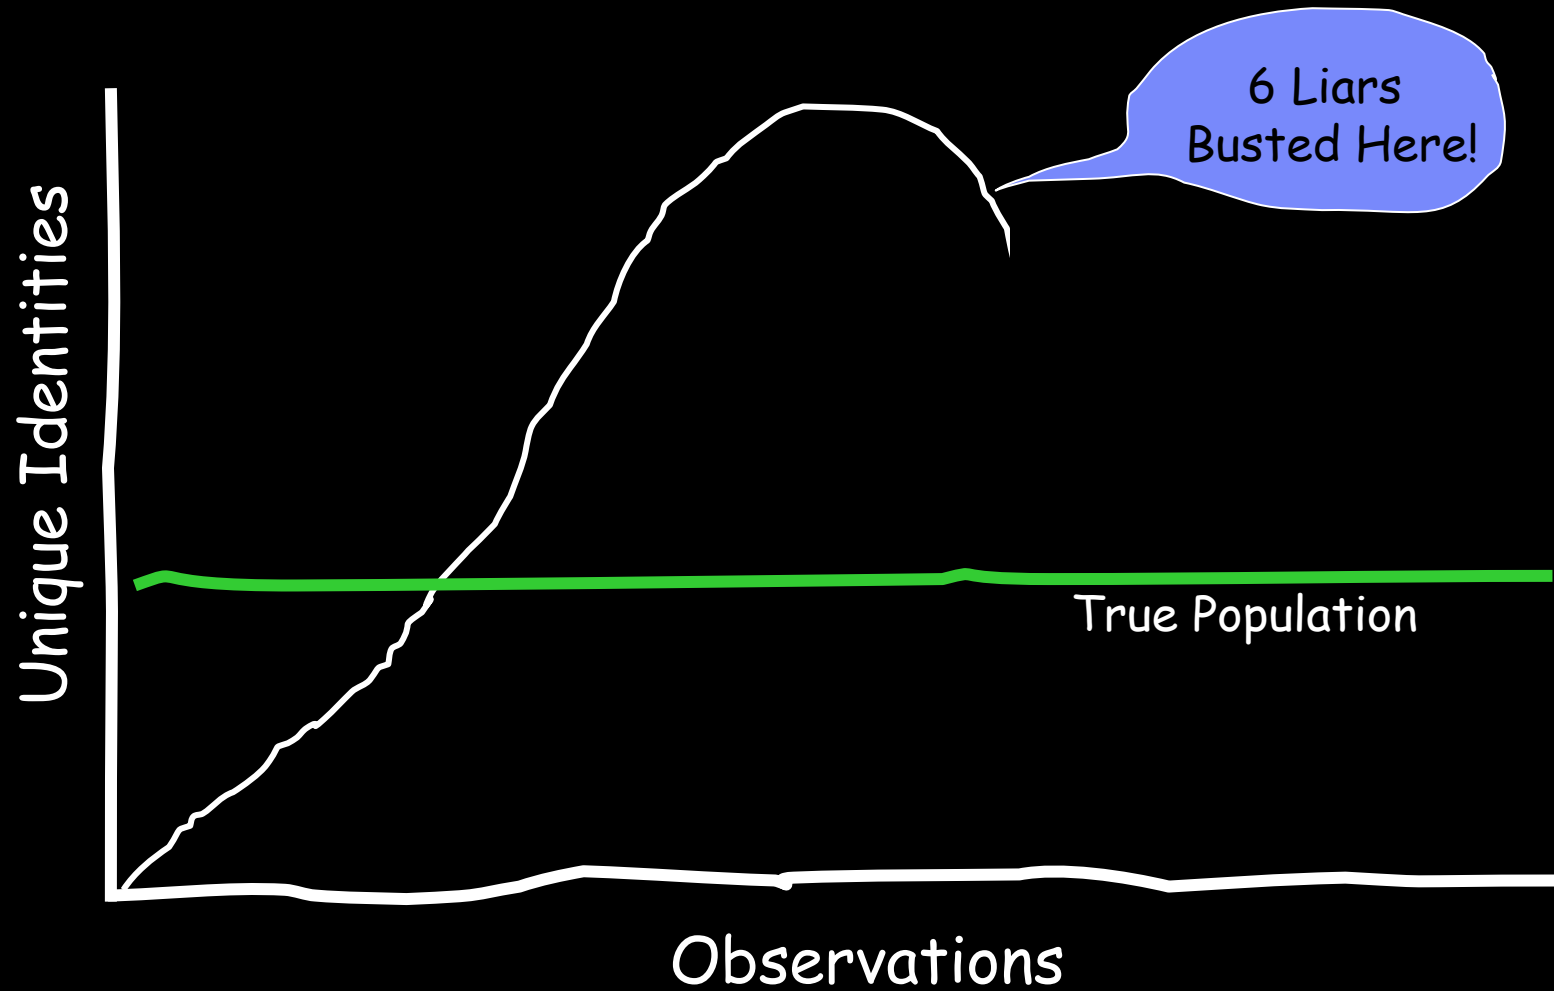

Data Triangulation

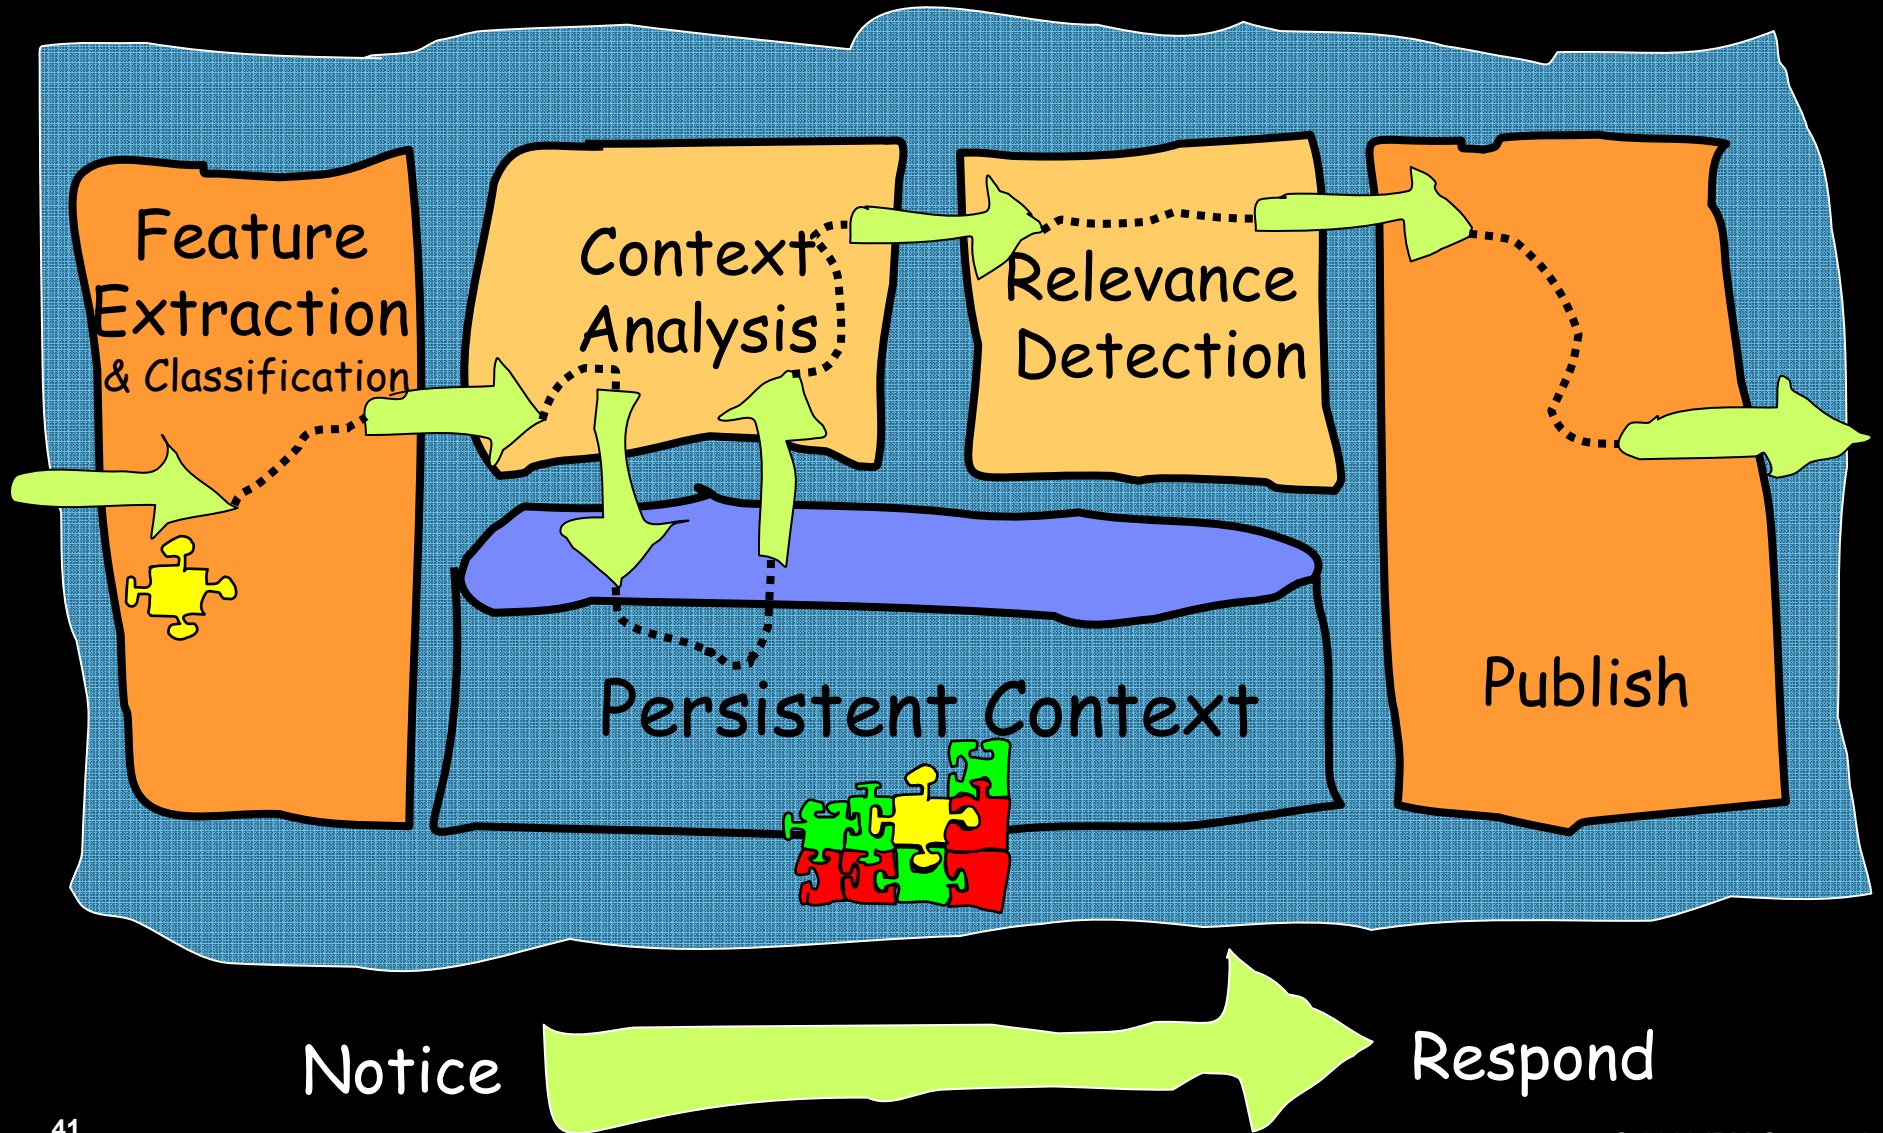

"Expert Counting" is Fundamental to Prediction

- Is it 5 people with 5 accounts ... or is it 1 person with 5 accounts?
- If one cannot count ... one cannot estimate vector or velocity (direction and speed).
- Without vector and velocity ... prediction is nearly impossible.
- Therefore, if you can't count, you can't predict.

And, Deceit Revealed

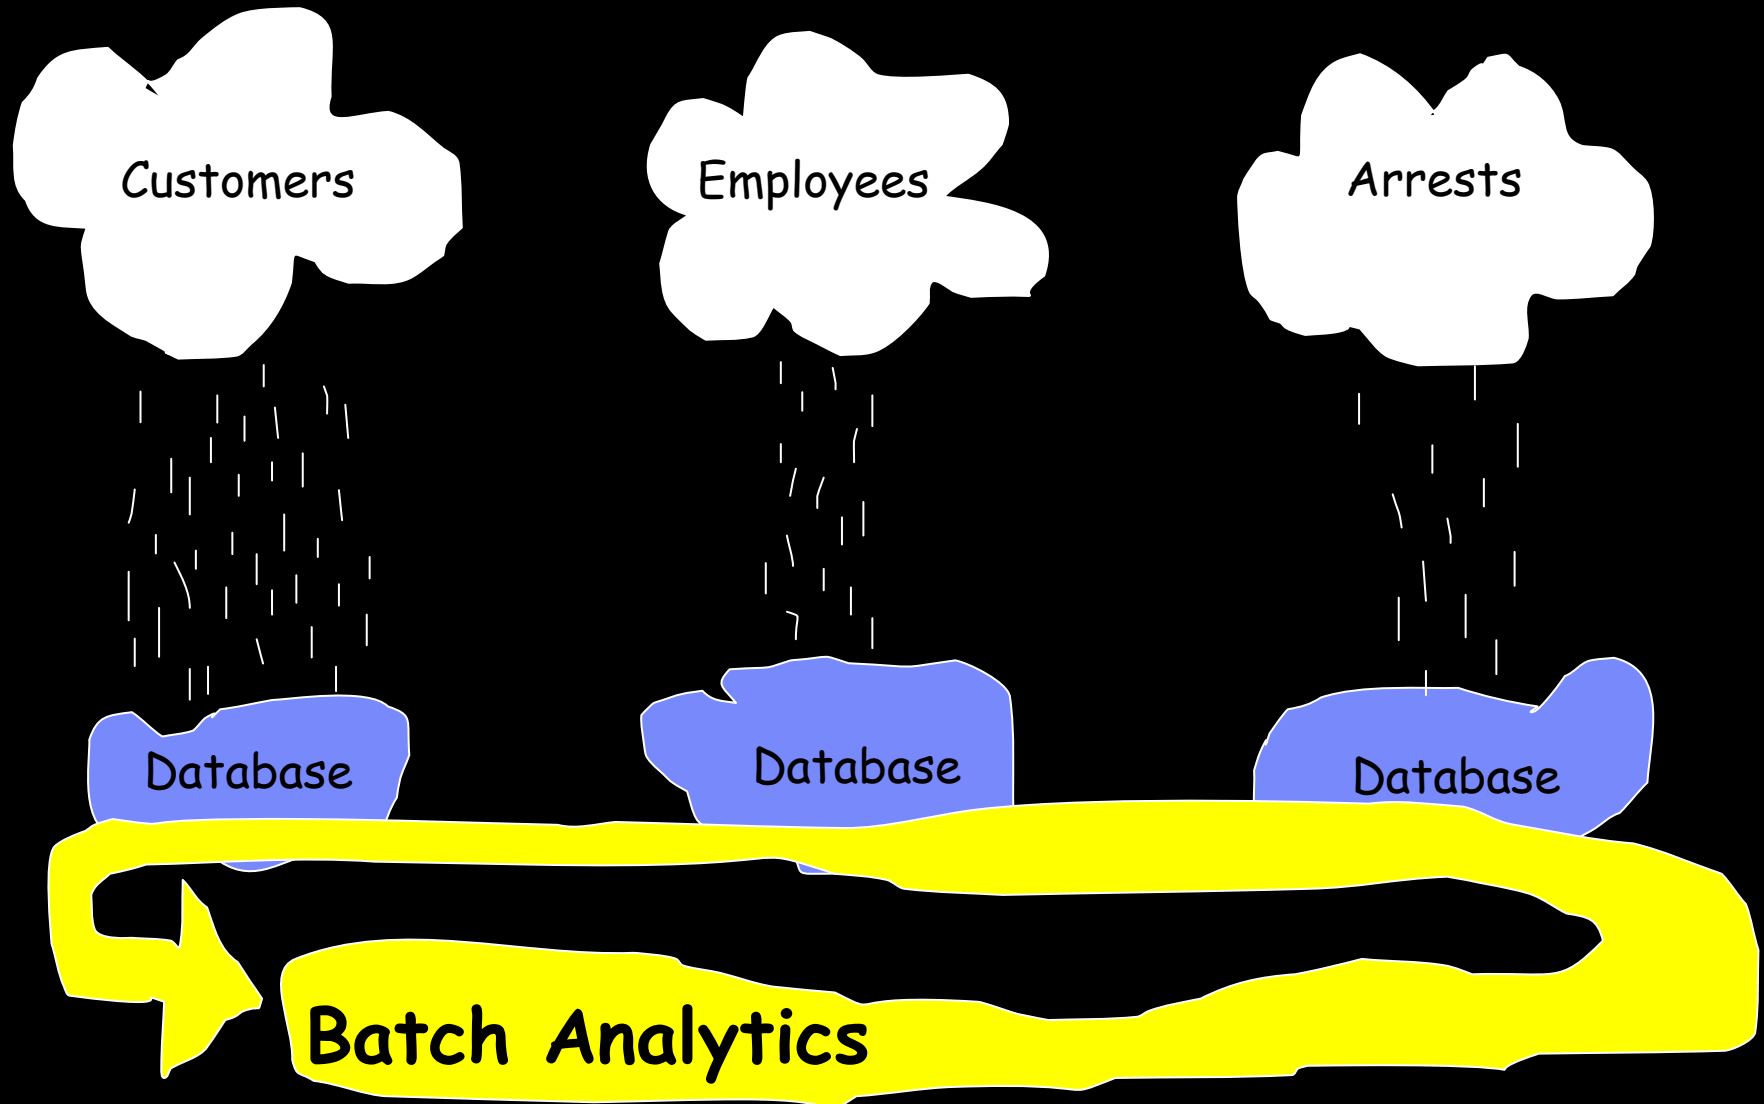

Sensemaking: Major Moving Parts

1st Principle

The data is the query.

"The Data is the Query" Beats "Boil the Ocean"

2nd principle

Treat queries like data to avoid
having to ask every question
every day.

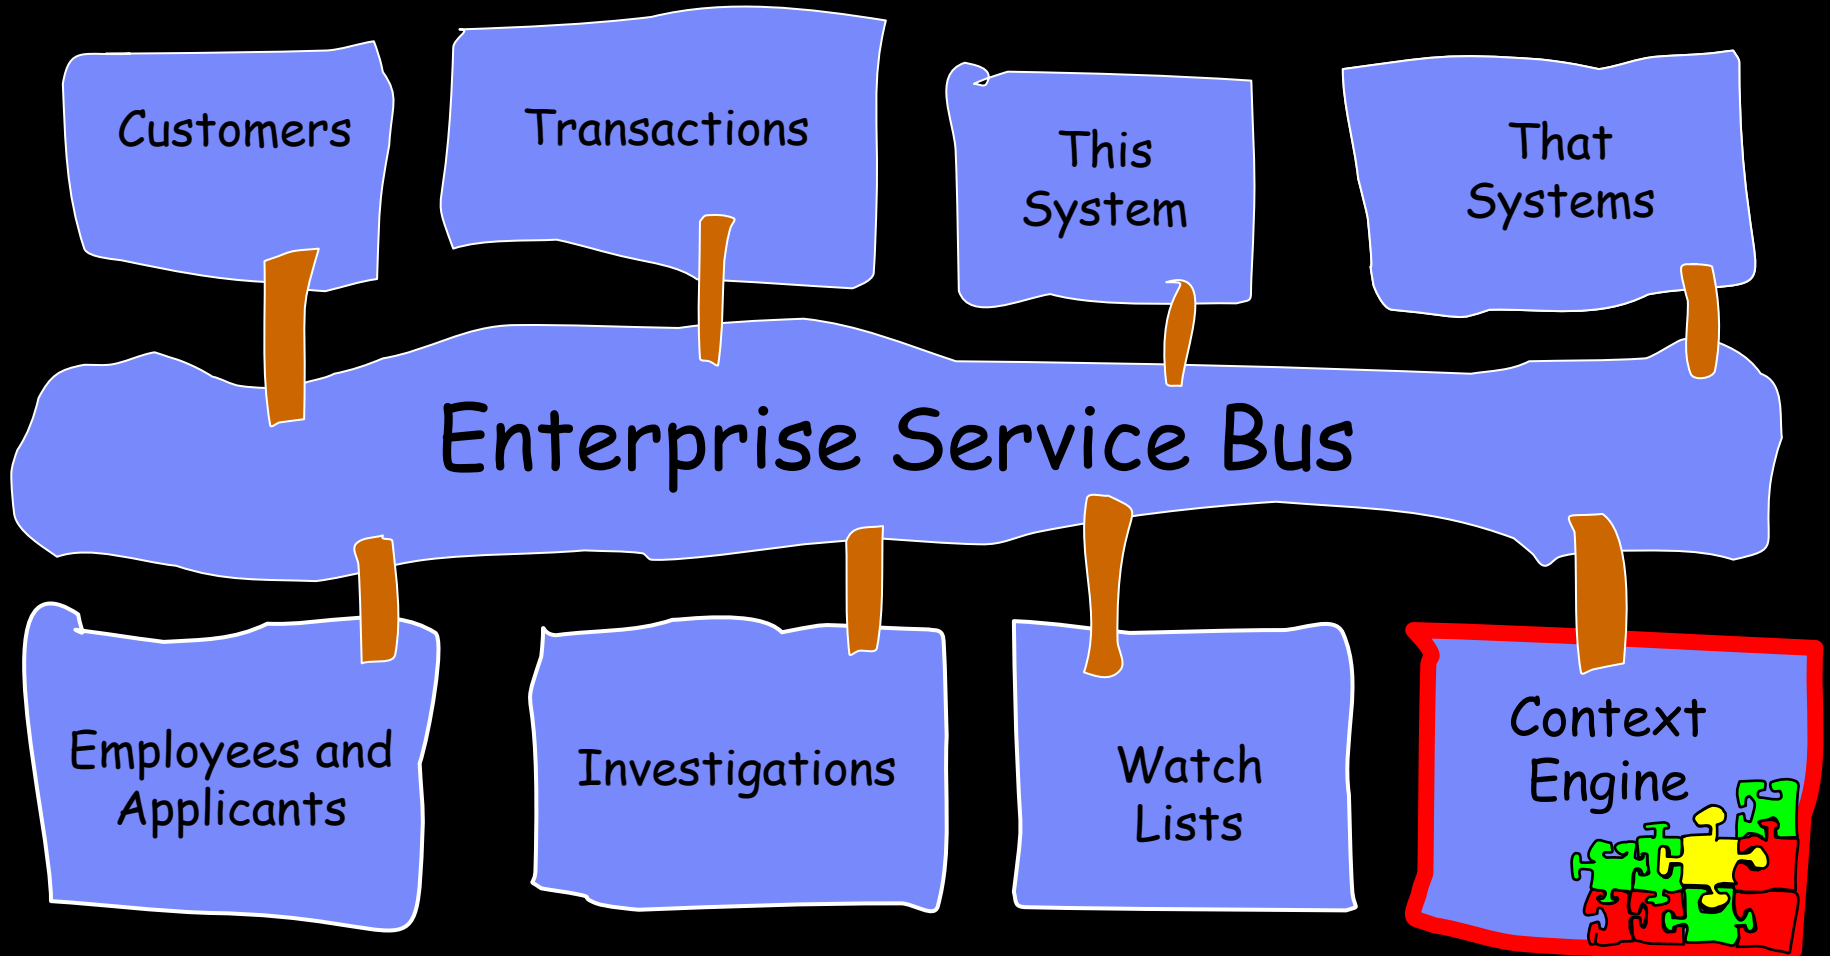

New Think: Data and Query Equality

	Traditional	Intelligent Systems
Queries find data	✓	✓
Data finds queries	✗	✓
Data finds data	✗	✓
Queries find queries!	✗	✓

3rd Principle

Enterprise awareness is computationally most efficient when performed at the moment the observation is perceived.

An Enterprise-Wide SOA Service

SOA = Service Oriented Architecture

Significantly Scalable

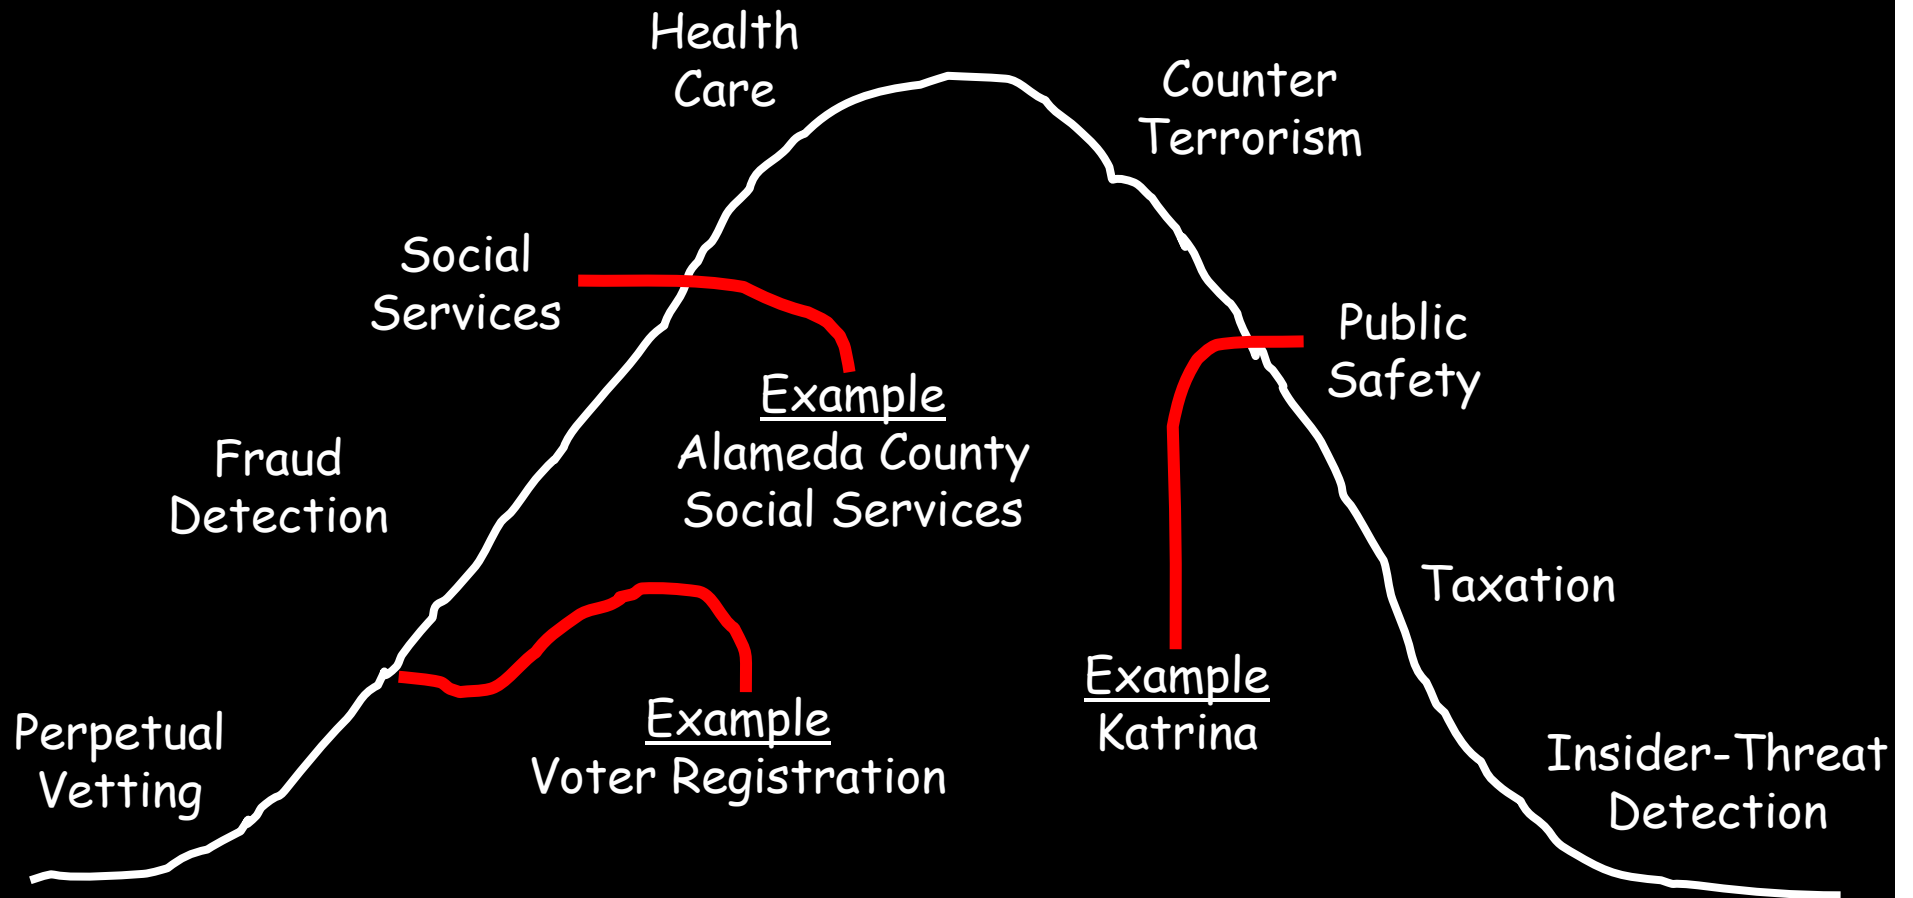

- After ingesting 800M historical transactions which resolved into >250M unique identities and simultaneously evaluating risk/opportunity at three (3) degrees of social separation ... the engine was sustaining >2,000 real-time transactions per second.
- And, speed matters because you have to be able to learn your past!

NORA Becomes ...

something unspeakable
and then ...

IBM InfoSphere Identity Insight V8

Delivering on Smarter Planet

OMG

Space-Time-Travel

- 600B cell phone transactions are generated annually containing geo-spatial data
- This data is being de-identified and shared with third parties - in volume and in real-time
- Your travels quickly reveals where you spend your time (e.g., evenings, working hours) and friends (via co-location trends)
- Re-identification (figuring who is who) is trivial
- The power and consequences of this are mind-numbing
- As analytics are applied to the people's space-time-travel footprints ... the way we deal with identity will totally change
- Space-time-travel data is analytic "super food"

Just Like Magic ...

- Prediction with 87% certainty Tommy will be at this location next Thursday at 4:47pm
- Top 10 people you co-locate with, not at home and not at work) - the one name you don't recognize is following you
- Uberstan preempts the next mass protest in real-time
- A political opponent is crushed; resigning two days after announcing their candidacy

Consequences

- Space-time-travel makes for absolute identification and disambiguation
- It is the ultimate biometric
- This geospatial data will also help reshape other very tough problems like image classification and identification
- Best kept secrets will be unraveled
- It will enable enormous optimization and opportunity
- At the same time it will challenge existing notions of privacy
- Geospatial awareness ... here now and more to come

Six Ticks to a Total Surveillance Society?

Surveillance

is irresistible.

Sensors

become ubiquitous.

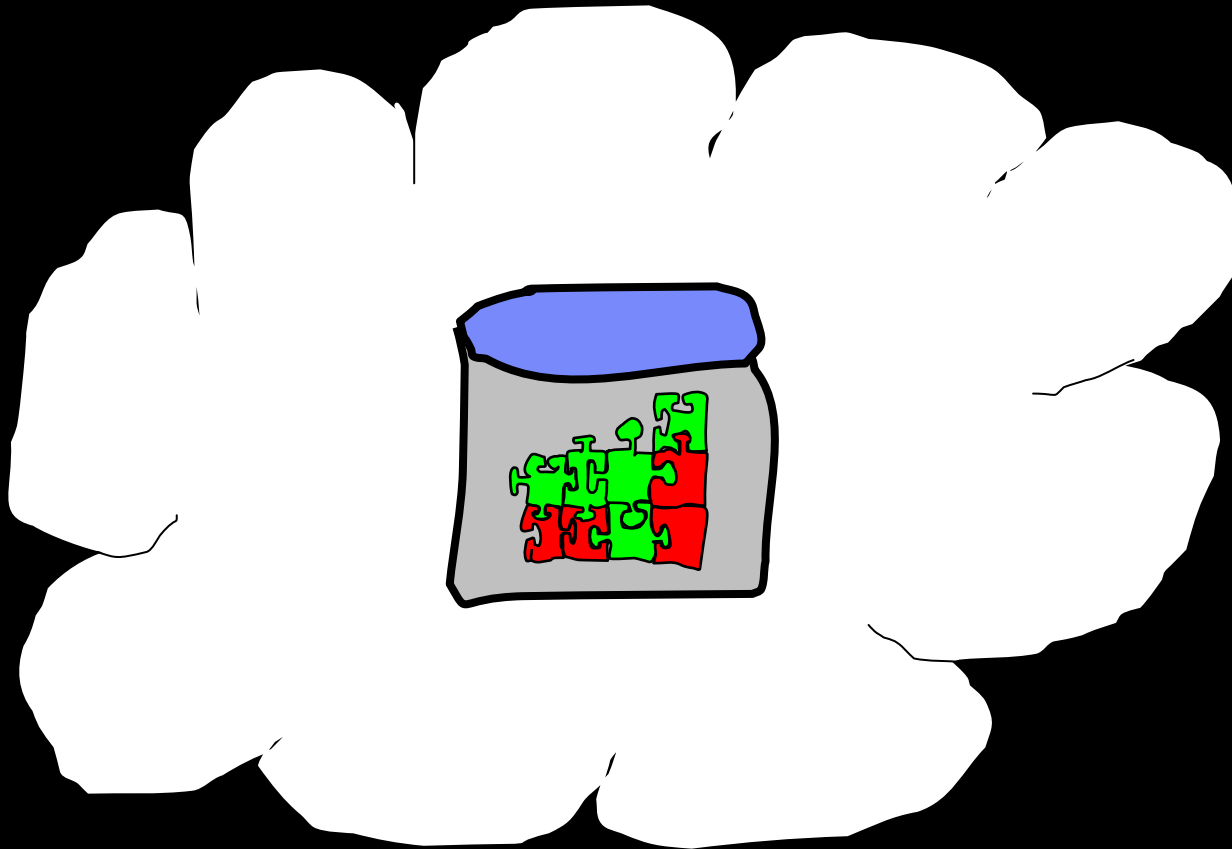

Piles of data

become one.

Information in Context

Context Accumulating in the Cloud

2050 Prediction

Collective intelligence
will locate what you
need to know
... and tell you!

When collective intelligence serves ...

... you and
your doctor ...

LOVE!

HATE!

... the police
looking at you ...

Back to Reality

Maybe Next Year?

- Permitting your bank to subscribe to your motion
 - Identity theft cut by more than 50%?
- Allowing your preferred search engine access to your motion
 - Not just the best dry cleaners, also the most convenient
- Letting a travel-oriented ad engine subscribe to your motion
 - Every suggested traffic detour is most appreciated
- Supplying your motion to a parcel delivery service
 - When they knock for a signature, of course, you are there

What of Privacy and Civil Liberties Protections?

Responsible Innovation

- Listen to and engage the privacy community
 - ACLU
 - CDT
 - EFF
 - EPIC
- Deploy systems with tamper resistant audit logs
- Reduce the risk of unintended disclosure
 - Move less data
 - Use data minimization and anonymization where possible

Closing Thoughts

It's all about
competition.

To Beat the Competition ...

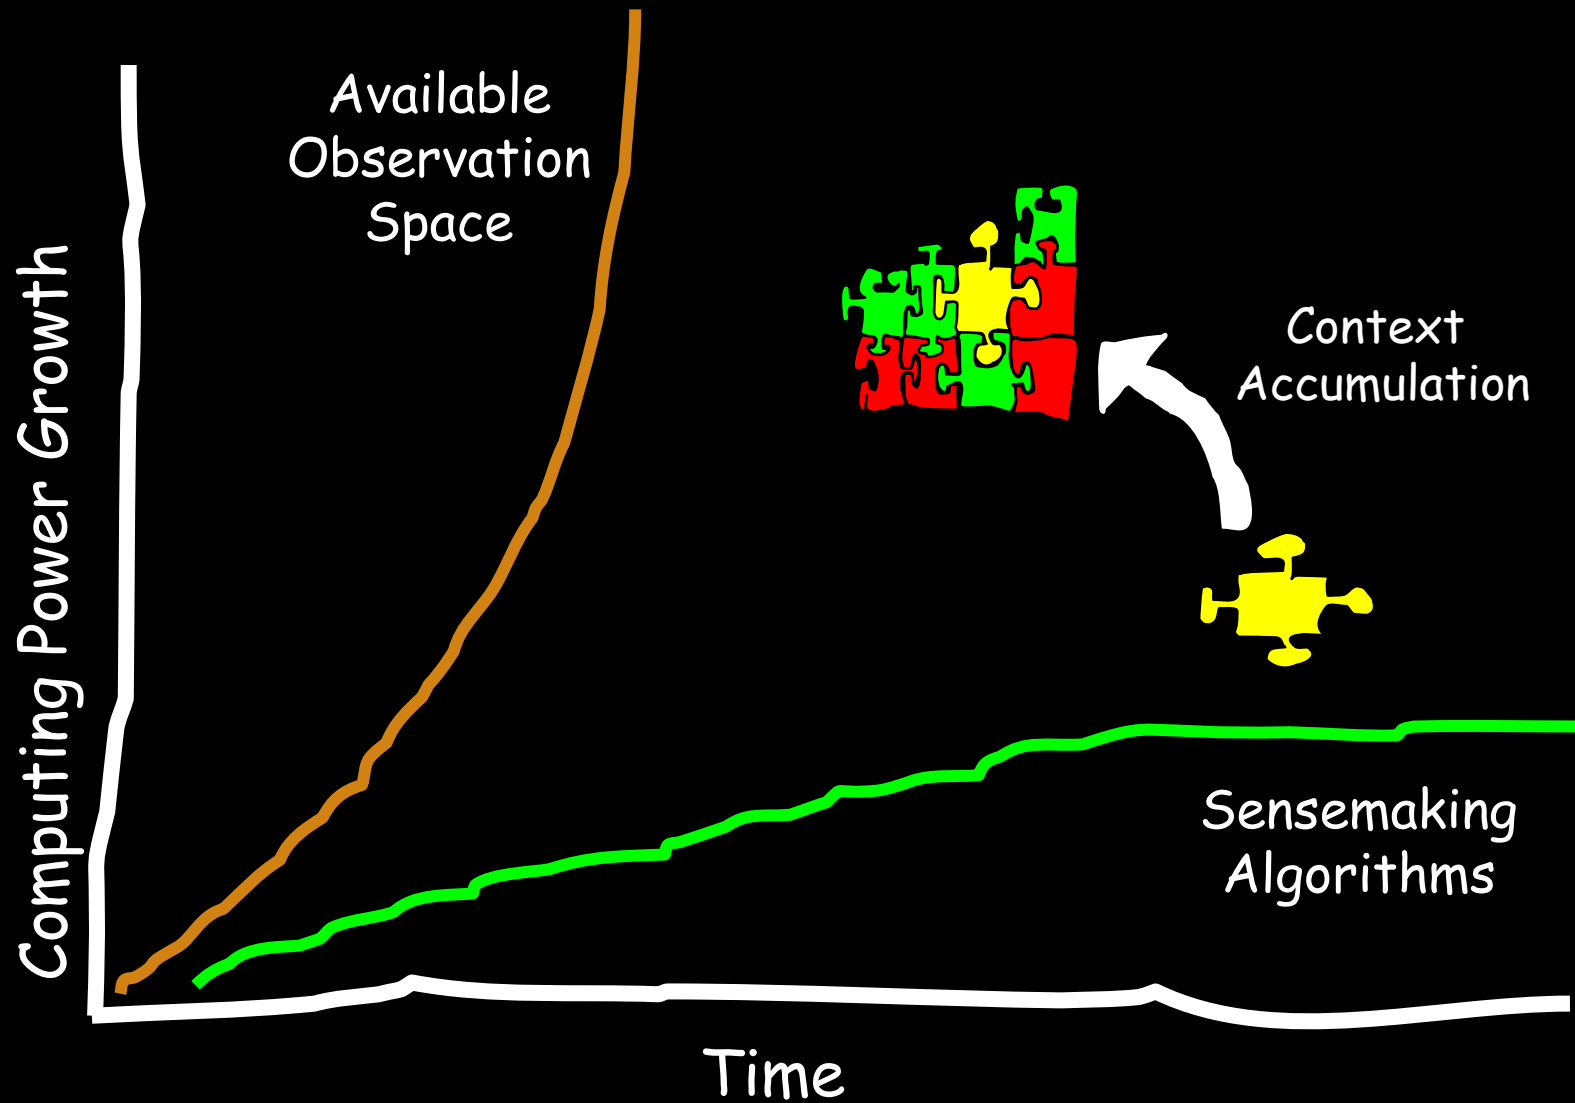

"Every millisecond gained in our program trading applications is worth \$100 million a year."
