Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area. All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

Abstract

8693: Shaping the Future of IBM Documentation Delivery and Management

Monday, February 28, 2011: 6:00 PM-7:00 PM

Room 201B (Anaheim Convention Center)

- Speakers: Geoff Smith (IBM Corporation), Iris Rivera (IBM Corporation) and Bob Pfeiffer (IBM Corporation)
- As most of you know, IBM's corporate direction is to deliver all content in Information Centers. What do you like about our current internet library? How can we change it to make your job easier? This session is designed to gather your requirements as we roll out this new direction. After a short introduction to our strategy and tentative plans, we will look to the audience for direction on electronic delivery, information currency, and customized information. What are your needs and requirements? Come help us decide the future of IBM product documentation.

z/OS Documentation Strategy Tools and Technologies

Recap Documentation Strategy

Today

- Authoring
 SGML (IBMIDDOC)
 - -Books and book metaphor
- Information Formats
 - BookManager, PDF, Indexed
 PDFs, HTML via Library
 Server
- Distribution
 - -Internet
 - -CD Collections
 - -DVD Collections

Tomorrow

Authoring
 –XML (DITA - Open)
 –Articles and web metaphor

Information Formats Eclipse-based Information Centers, RSS, PDFs, Indexed PDFs

Distribution

 Internet
 DVD

Recap: Information Strategy

- IBM Library Server, formerly known as IBM BookServer ships with z/OS and is used to convert BookManager books on the fly to HTML to serve on the internet. It also serves PDF.
 - Library Centers: are repositories created using Library Server.
 - Example: z/OS V1R9 Library Center (http://publibz.boulder.ibm.com/bookmgr_OS390/libraryserver/zosv1r9/)
- **IBM Eclipse Help System** (IEHS), is the new strategic framework for delivering online help, and Information Centers. The content is typically already in HTML format, so you can think of IEHS as a mini website.
 - Information Centers: are repositories created using IEHS.
 - Example: z/OS V1R9 Information Center Beta
 - (<u>http://publib.boulder.ibm.com/Information Centers/zos/v1r9/index.jsp</u>)

Library Center and Information Centers Compared

IBM Library Centers (BookManager-based)

- One repository has multiple products
- Not indexed by Google and others
- Within the repository, BookManager search is used.
- Library Center repositories can be updated using IBM's softcopy librarian

IBM Information Centers (Eclipse-based)

- Usually one repository per product
- Can be indexed by Google and others
- Within the repository, Lucene search is used
- Eclipse based repositories have a built in update function

BookManager to Information Center Mapping

BookManager

- Search shelves are used to provide filtered searches
- There are shelves by
 Element and feature
 - -Tasks
 - Planning
 - Installation
 - Diagnosis
 - -Reference

-What shelves are used?

Information Centers

- Search scopes help narrow search
- Inherent by architecture are the elements and feature scopes
- Currently there are no other specialized scopes
- Are search scopes needed?
- If so what ones are critical?

The z/OS Base Documentation Team's Transition

- We plan to maintain traditional deliverables during the transition.
 - Short term we will continue to produce BookManager and PDF
 - We are optimizing for information center delivery
 - If you are unable to move to information centers now, we've added function to Library Server to help
- In 2009, we provided our first production level information center (z/OS R11)
- In 2011, we plan to provide new update function for our information centers
 - Authoring:
 - Gradual migration of active from books to topic-based information to DITA
 - Distribution:
 - Publish content in Information Centers
 - Distribute DVDs of Information Centers for local install
 - Continue to distribute DVD and CDs (if need) for standalone access

© 2010 IBM Corporation

Information Centers are IBM's Strategy to Provide Product Documentation

Key Advantages - Information Centers are:

 Are Internet friendly (easily indexed by Google and other search engines)

✓ Are non-proprietary (HTML and XML) makes it easier for ISV integration

Have extensible function due to plug-in architecture

Can take advantage of ever evolving internet technologies:

- ✓ The Semantic Web
- ✓Collaboration
- ✓ Web 2.0 and so on

Can easily incorporate interactive elements such as, wizards, calculators, dynamic tables, and multimedia

✓ Modular, article-based information rather than books will make it easier to create solution-oriented information

 Easier and faster updates to improve content quality and correct errors

✓ Higher customer sat

- Lower incidence of outages due to doc APARs
- Might lead to lower service costs

✓ Internally, they are useful for Agile development projects, because they can provide be rebuild weekly or in some cases, even daily to provide all teams with the most current information.

Information Center Acceptance

Proposed Future of z/OS Documentation

- We plan to phase out use of BookManager because support and the ability to build BookManager format have become increasingly difficult.
 - What problems will this cause?
 - Suggestions to mitigate potential problems
- Adopt information centers as our delivery mechanism
 - Is it required or desirable to have a framework that runs native on z/OS?
 - If so, eclipse has a update mechanism will this cause problems?
- Information Currency
 - Are quarterly updates coordinated with service boundaries enough?
 - If not, how frequently would you like updates
- Various Topics
 - What are your needs for mobile access to information with information centers?
 - What are your needs for standalone information
 - Are there any special considerations for disaster/backup
- General Concerns Complaints Questions
