Rational Team Concert

Rational Team Concert brings together diverse teams allowing them to work together to build solutions

Client Integrations

-  Eclipse and Eclipse-based products
-  Web 2.0
-  Visual Studio
-  ISPF

Extensions for System z

-  Native z/OS build support
-  Integration with Rational Developer for System z
-  Integrated SCM solution for z/OS and distributed assets
-  Flexible Deployment Platforms - z/OS, Linux on System z, or distributed

**Statements on future direction subject to change*

What's new in RTC 3.0.1?

- **Native z/OS development**

- *ISPF 'Green Screen' SCM client*

- **Enterprise Platforms enhancements**

- *Dependency based Build (z/OS)*
- *Promotion of builds (z/OS)*
- *Deployment of Applications (all platforms except Windows)*
- *Context aware-search*

Driving Business Differentiation

ISPF 'Green Screen' Client

Full Function SCM Client

- Users can check out/check in code to native z/OS file system
- Providing value add of RTC SCM
- Repository Workspaces, change sets, link to work items, build requests
- Linking to Work items though list
- Ability to access and edit files in z/OS UNIX directories (HFS)
- User experience consistent with ISPF
- Simple to use for fast start
- Allows phased implementation
- Reduces dependency on deployment of Rational Developer for System z (Rdz)

NOTES

- Use the Web client for WIs and planning
- Use the Eclipse client for Administration
- Available in all Developer clients

ISPF SCM Client

```

Menu  Utilities  Help
-----
Repository Workspaces                               Row 1 to 3 of 3
Option ==> _____ Scroll ==> CSR

Enter new repository workspace name to create or "/" against existing
repository workspace for options

Names                                               Load location
-----
> Mortgage App Dev                                USER55.SANDBOX
- Test Workspace
- Weekly Integration Workspace
***** Bottom of data *****
    
```

```

Enter new repository workspace name to create or "/" against existing
repository workspace for options

Names                                               Load location
-----
Mortgage_M12                                       Data set prefix  z/OS UNIX dir.
Mortgage_M12_ISPF                                XHOUIS.TOM6      /u/xhouis/tom6
    
```

Dependency Based Build

Dependency Based Build

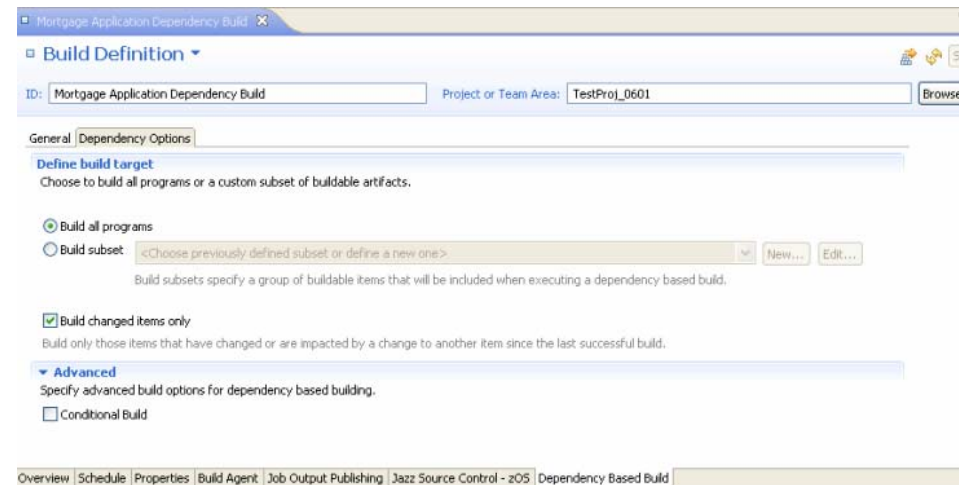

Logical Dependency data is captured from source stored in the SCM

Providing Access to the Meta Data

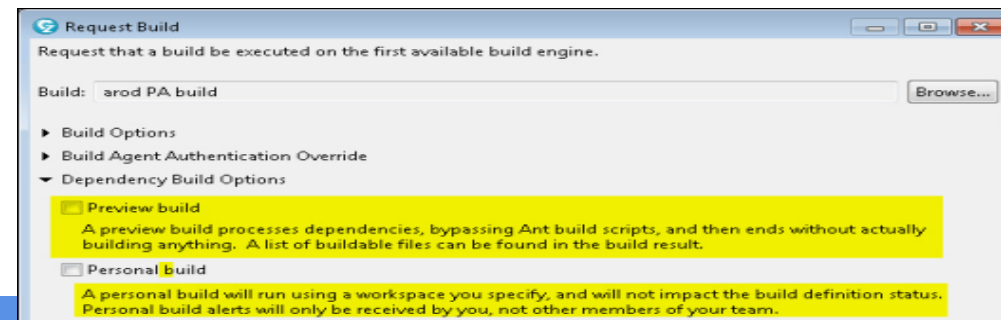

Build Preview

Dependency based build

Build preview

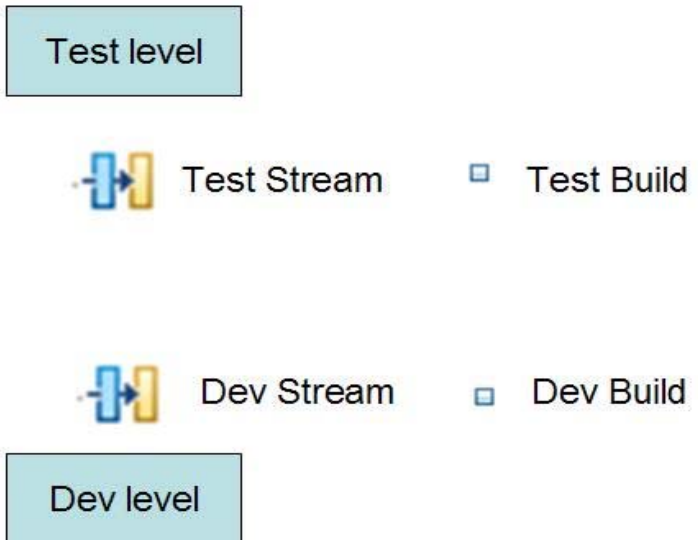

Promotion

Move applications through the stages of lifecycle to
Ensure consistency - Minimize rebuilding

RTC definitions

Build machine

Promote Work Item(s)

Select Definition: Browse...

Promotion options

Promote source only

Promote source and binaries

Include children

Select Work Item(s):

ID	Summary
<input checked="" type="checkbox"/> 19	Testing2
<input type="checkbox"/> 11	Again
<input type="checkbox"/> 9	Testing
<input type="checkbox"/> 4	Define categories and releases ...
<input type="checkbox"/> 3	Define sprints/iterations

Select All Select None Add Item... Run Query...

? Promote Cancel

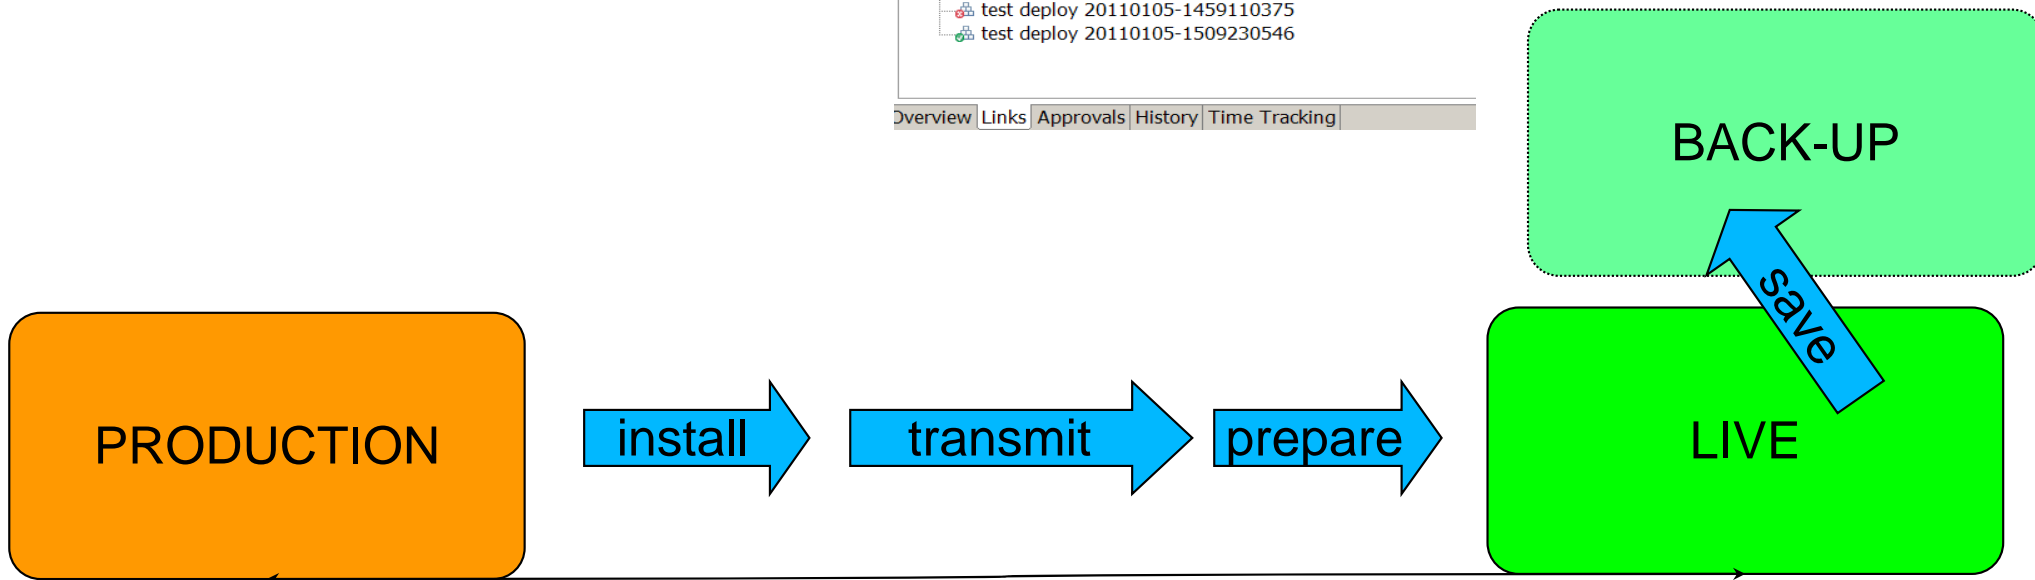

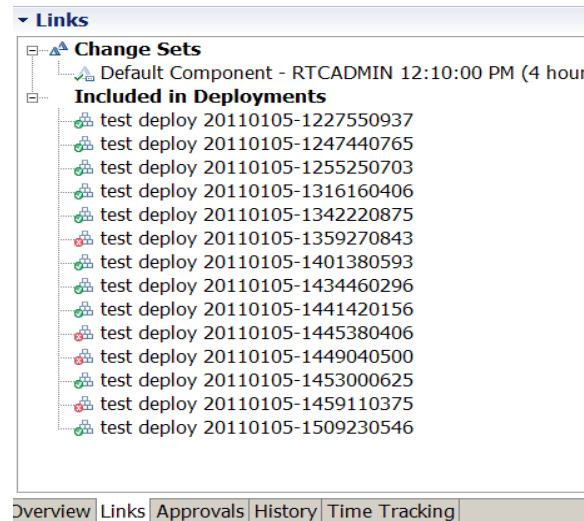

✗ At least one work item must be selected for promotion.

- Promote source, build output, and related meta data together
- Work Item based Promotion
- Full audit trail

Deployment

Move applications to the Live environment (Test or Production) with control, consistency and traceability.

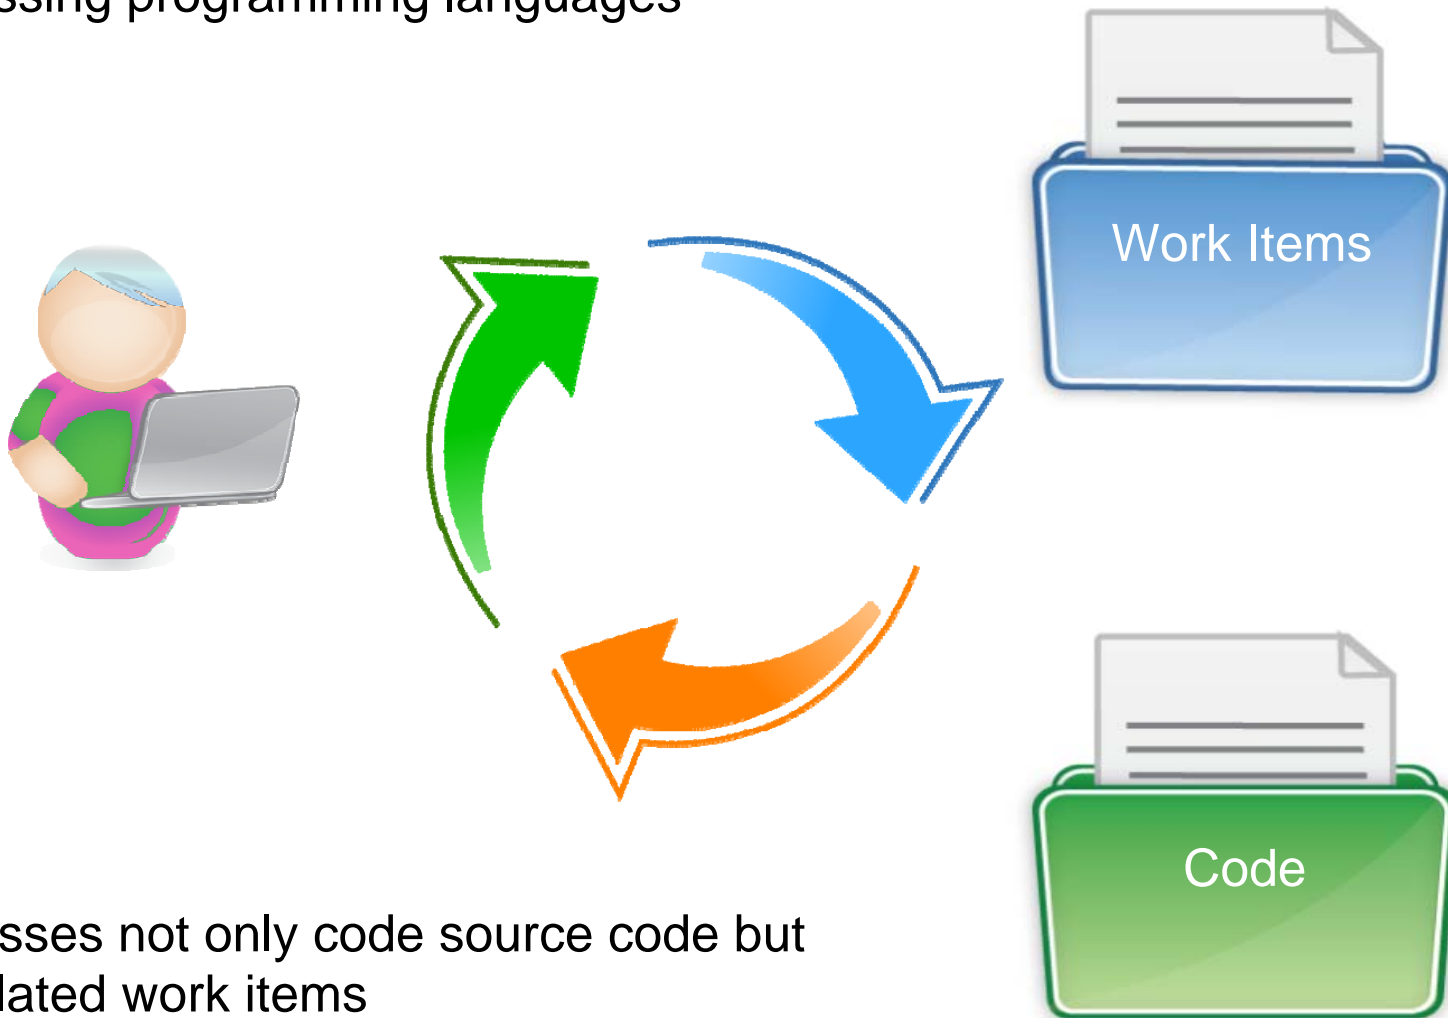

- **Basic deployment support for programs**
- **Deployment integrated into RTC**

Traceability

Context Aware Searching

Search with an understanding of processing programming languages

Processes not only code source code but the related work items

What's new in RTC 3.0.1?

- **Distributed SCM**
 - *Cross Repository SCM Operations*
 - *More Flexible Change Set Linking Across Servers*
- **Enterprise Build Support**
 - *Out of the box Rational Build Forge Integration*
 - *Multiple Build Engine Types*

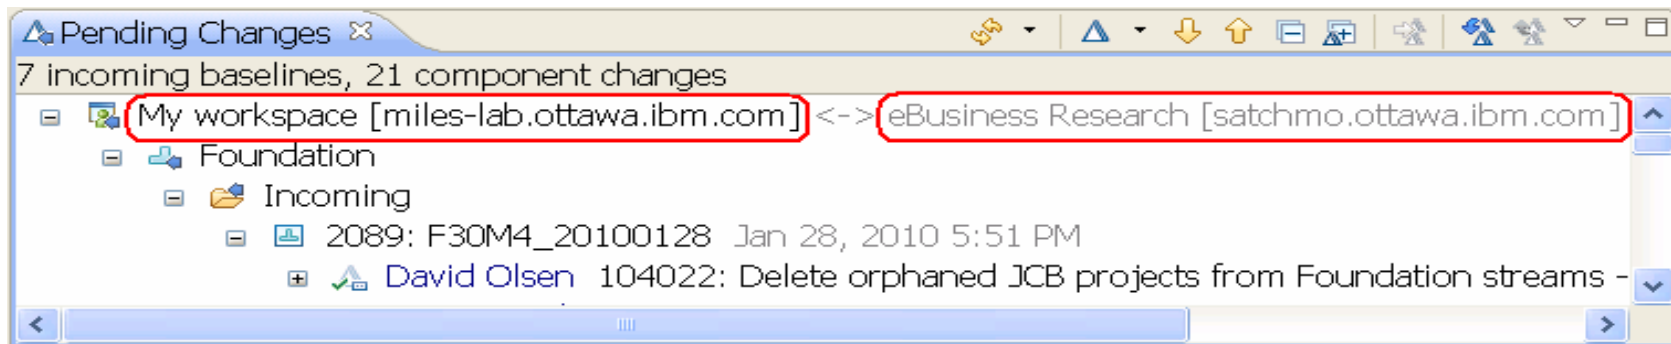

Driving Business Differentiation

Enterprise Enhancements

- **Distributed source control**
- You can now flow components and change sets between workspaces and streams hosted on different repositories.
- You can turn this feature on or off on a per RTC server basis

- **Support for Multiple Build Engine Types**
- There are now multiple types of build engines: Jazz Build Engine, Rational Build Forge, and Rational Build Agent
- This allows the engine and its configuration to be shared across multiple definitions, and for definitions to support multiple engines. Different projects may now define their own engines.

Summary of RTC 3.0.1

- Any Plan
 - **Advanced Planning for Formal and Agile Teams**
- Any Process
 - **Flexible Customization and Configuration**
 - **Distributed SCM**
 - **Enterprise Build Support**
- Any Platform
 - **A single release for all platforms**
 - **Enterprise Platform Enhancements (z and p)**
 - **Enhanced RTC Client for Microsoft Visual Studio IDE**
 - **Open Integrations to your Existing Tools**
- With simple user based licensing and more flexible pricing options

Driving Business Differentiation
