

SHARE MVSE Requirements

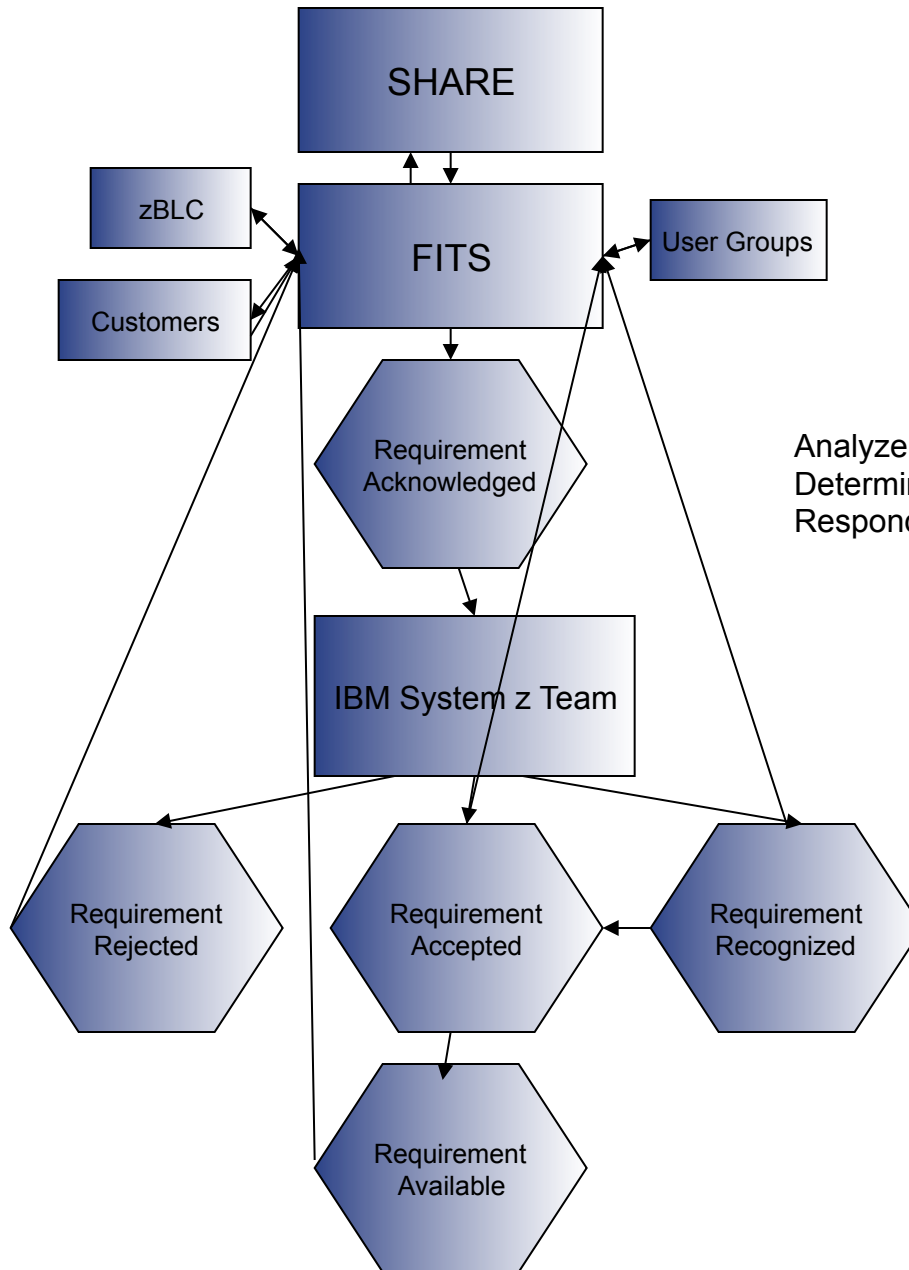

Cheryl Watson
Watson & Walker, Inc.
www.watsonwalker.com

March 14, 2012
Session 10651

What is a Requirement?

- SHARE member creates a online request for an enhancement to z/OS or its subsystems
- Other SHARE members comment on it
- All project members vote on it (-5 to +5, where +5 is the most wanted, and -5 indicates you don't want IBM to do it)
- IBM reviews it and responds with: already available (AV), acknowledged (AK/RA), accepted (AC), recognized (RC), or rejected (RJ)
- Benefits
 - More likely to produce results than APAR with SUG
 - You can simplify life for yourself and others
 - You get to influence IBM's development
 - You can be a hero at work!

Analyze the requirement
 Determine applicability for upcoming releases
 Respond: Rejected/Accepted/Available/Recognized

Requirements Categories

- ADI – Application Development & Integration
- ASM – Assembler
- CICS
- IMSD – IMS
- LANG – LE, COBOL, PL/I & C++
- REXX
- SEC – Enterprise Data Center/ Security/Audit
- DB2
- STOR – Distributed Storage (Tivoli)
- ITSM – IBM Tivoli Storage Manager
- LVM – Linux/VM Program
- EWCP – Enterprise-wide Capacity & Performance
- ISPF
- I2T – Cloud, Analytics, Tivoli Change & Config
- JES2
- JES3
- EPS – Infoprint, AFP, PSF
- MVSE – MVS SCP
- MVSO – MVS Open & Distributed
- MVSS – Storage Management
- NETW – Networking

How Do You Join?

- Go to www.share.org, select *Members*, select *Requirements – Industry Influence*, select *1. Enter the SHARE Requirements System*
- If you're not already registered, you'll get a sign up request, fill it out and wait a few days or a week
- Once registered, you can *Enter Requirements System*
- At the bottom, click on list of *areas of Interest (projects)* to request membership in one or more areas, wait a few days

How Do You Participate?

- Once you've registered for a project, you can see the status of each project and can select it.

Please select one of the following to enter a particular Area of Interest (Project).

# Open Discussion	# Open Voting	# Not Voted	
			<input type="radio"/> MVS/Enterprise-wide Capacity & Performance
1 Open for Discussion. There have been no postings since you last visited this forum at 2009-12-04 10:55			<input type="radio"/> MVS/JES2
	3	3	<input type="radio"/> MVS/MVS SCP
2 Open for Discussion. There have been no postings since you last visited this forum at 2009-12-04 10:53			<input type="radio"/> MVS Storage Management

If you wish to participate in a new Area of Interest, please click here to see a: [list of Areas of Interest \(projects\)](#) and Products against which each has submitted requirements. From there you will be able to request "membership" in one or more Areas of Interest (projects). Please note that membership implies a willingness to participate fully in requirements discussions and priority voting. SHARE is looking for participants in the process, not disinterested onlookers!

MVSE Requirements Project

- November 2009, organized team to review all outstanding MVSE requirements
 - Current contributors: Brad Carson, Tom Conley, Ed Jaffe, Robert Jenkins, Sam Knutson, Mary Anne Matyaz, Cheryl Walker, Dave Whitney (with thanks to James Cray and CA for conference calls)
 - Arrange conference calls every few weeks to review selected requirements starting with obsolete responses (FO and LR)

- IBM Publishes Requirements Met
 - http://www.ibm.com/systems/z/os/zos/bkserv/user_group_reqs.html

MVSE Requirements Project

- In July 2011, we started to prioritize all active requirements
 - Sent out one list of 110 and asked members to allocate 100 points among the requirements
 - A week later, sent out another list of about 110 and asked for same type of allocation
 - That gave us a list of 80 requirements with votes
 - Sent out list of 80 and asked members to rank the requirements from 1 to 10, with 1 being the most important.
 - Provided list to IBM at Share on August 9th.

How Can You Influence IBM?

- Sign up to the Requirements system
- Sign up for the projects that interest you
- Comment on requirements that come open for discussion
- Vote on requirements that come open for voting
- Create new requirements when you see a way to make life easier

HOW TO INFLUENCE IBM

Every customer has the ability to influence z/OS development in IBM through SHARE requirements. The idea for this article came from my recent involvement in the SHARE MVSE (Core Technologies) project. The MVSE project has created almost 1,000 requirements, and IBM has implemented most of them. (And that's just one project!) That's pretty exciting and shows the SHARE community's influence on the industry. But in reality, only a small percentage of the SHARE members participate in the requirements process, and it could be even more powerful with more participants. So I'd like to invite you to join this process. Wouldn't you like your voice to be included in those heard by IBM?

Help set
IBM's priorities

What are SHARE Requirements?

Members of the SHARE community participate in an activity designed to tell IBM what changes or improvements to z/OS and its subsystems would be most beneficial. If you want to have IBM make a change, you can submit (online) a SHARE Requirement. Other members can comment on it, and finally vote on it. IBM then reviews all highly rated requirements on a timely basis, and will post a response to each requirement. Sometimes IBM agrees to make a change, sometimes they reject it, and sometimes they put it into a "we'll consider it" category.

This is very similar to you submitting a PMR that becomes an APAR with a closed status of SUG (user suggestion). The difference is that you're only one person submitting an APAR, but the SHARE community submitting a requirement may indicate dozens or hundreds of people who support you. Who do you think IBM will pay more attention to? The SHARE requirements, of course!

Any SHARE member can submit a new requirement, and any member can vote on requirements submitted by other members. This ability to participate online becomes even more important as travel budgets are cut and fewer people are able to attend all of the conferences.

How to Become a Voting Member

As SHARE attendees know, SHARE is divided into projects. Each project maintains its own set of requirements.

It's actually quite easy to become involved in requirements, although many people are too timid to explore it. If you have a userid and password on the SHARE site, it's easy to join the requirements process. If you don't have a userid, and you know that your

company is a SHARE member, you can create your userid. Go to the SHARE Web site (www.share.org), select *Members* on the top menu, and then select *Join SHARE*. If you don't know your company code, you can search for it on the login screen. Then create a profile for yourself, including a userid and password. By the way, once you have a userid, you can also look at ALL of the SHARE *presentations*, not just the ones from the last SHARE.

Once you have a userid, you can now join the Requirements system. From the SHARE Web site, select *Members* on the top menu, and then select *Requirements - Industry Influence* from the drop-down menu. At the bottom of the screen is this link to a document that describes the SHARE Requirements System - http://www.share.org/Portals/0/Reqs_Instructions.pdf. Read this before continuing in the process. Next, select option #1 to sign on to the SHARE Requirements system. (A direct link to the requirements section is <http://www.share.org/SHARERequirementssystem/tabid/299/Default.aspx>, where you'll need to sign on.)

You are now redirected to the requirements site where you'll find a welcome screen. While not obvious, the first step is to select a link that says *list of Areas of Interest (projects)*. (See the last paragraph in Figure 1). At this point you'll see a list of all projects that have requirements. Select any of interest to you. Once you select a project, you'll see a screen that says your request is pending review and approval by the project coordinator. You can then continue to select more projects. You're done at this stage of the process, and can log out. Eventually (anywhere from an hour to a week), you will receive an email from each project saying that you've been approved. The next time that you see the welcome screen, it will show you all of the projects that you can access. See Figure 1.

Figure 1 – Bottom Half of SHARE Requirements System Welcome Screen

Please select one of the following to enter a particular Area of Interest (Project).			
# Open Discussion	# Open Voting	# Not Voted	
			<small>EWCP:</small> MVS/Enterprise-wide Capacity & Performance
1 Open for Discussion. There have been no postings since you last visited this forum at 2009-12-04 10:55			<small>JES2:</small> MVS/JES2
	3	3	<small>MVSE:</small> MVS/MVS SCP
2 Open for Discussion. There have been no postings since you last visited this forum at 2009-12-04 10:53			<small>MVSS:</small> MVS Storage Management

If you wish to participate in a **new** Area of Interest, please click here to see a: [list of Areas of Interest \(projects\)](#) and Products against which each has submitted requirements. From there you will be able to **request "membership" in one or more Areas of Interest (projects)**. Please note that membership implies a willingness to participate fully in requirements discussions and priority voting. SHARE is looking for participants in the process, not disinterested onlookers!

How to View Requirements

Figure 1 shows the bottom half of the Welcome screen after four projects have been approved for review - EWCP, JES2, MVSE, and MVSS. The left column shows whether there are any requirements open for discussion, the middle column shows the number of requirements that you can vote on, and the next column shows how many you can still vote on.

It's important to understand the phases of a requirement. The following description is displayed if you click on *Help* at the top of the page.

Phases of a requirement:

- 1) *Initial: Someone creates a new requirement. May or may not be a project participant.*
- 2) *Validation and Review while requirement is still in Initial Status: Project staff reviews the requirement and either accepts the requirement (Moving it to Open for Discussion); or confers with the Author about the proper disposition; or reassigns to another more appropriate project.*
- 3) *Open for Discussion: During this phase ALL project participants get a chance to review the requirement and make comments. During this phase project staff reviews all comments, and may modify the text of the original requirement based on the comments.*
- 4) *Open for voting: During this phase ALL project participants get a chance to set the priority of the requirement by voting. There is no provision for accepting comments during this phase. Requirement may not be changed because others have voted based on the requirement as stated. [You may vote on each requirement with a value between -5 to +5. A value of +5 indicates that you want IBM to make a change and it will greatly benefit your installation. A value of 0 indicates that the requirement doesn't apply to you. A value of -5 indicates that the change will either harm your installation or you would rather see IBM use resources for different enhancements.]*

Figure 2 – Definitions of IBM Responses

Help: IBM Provider Responses Defined

Bolding is added to this document to draw attention to key words in the responses. In general the hierarchy of responses are: AV-Available, AN-Announced, AC-Accepted, RC-Recognized, SG-Suggestion, UC-User Clarification, RJ-Rejected. AK and RA are simply acknowledgement that the requirement has been entered into the FITS system and that a response is to be expected within 90 days.

The following is a complete list of valid responses that the provider (IBM) may give:

- **AC-Accepted:** IBM agrees with the request and a solution is desirable and feasible. IBM intends to provide a solution. **However, IBM's plans may change, and no commitment is made that a solution will be provided. This response will be tracked and updated.**
- **AK-Acknowledged:** IBM has received this requirement and someone is evaluating it. An additional response will be given before the end of this measurement cycle (currently 90 days from the date submitted). **Note: AK and RA will be left in Waiting for Response status.**
- **AN-Announced:** IBM believes that the request described has been **addressed by an announced product, service, or policy.**
- **AV-Available:** IBM believes that the request described has been **solved with a current product, service, or policy.**
- **CL-Closed:** IBM has closed this requirement.
- **FO-Future Objective**:** IBM has received the request and believes that the request described will be solved with a future product, service, or policy, etc.
- **LR-Long Range**:** IBM has received the request and believes that the request described will be a long range consideration. No IBM commitment is made or implied as the eventual delivery of an acceptable solution.
- **MR-Multiple Responses:** See the detailed information within the response.
- **RA-Resource Assigned:** IBM has assigned a resource to evaluate the requirement.
- **RC-Recognized:** IBM **agrees** with the request and a solution appears to be a desirable objective. **A solution, however, may not presently appear feasible or implementable. No IBM commitment is made or implied as to the eventual delivery of an acceptable solution.**
- **RJ-Rejected:** IBM does not intend to provide a solution to this request. This request has been declined.
- **SG-Suggestion:** IBM will use the request as input to planning, but no commitment is made or implied. The request will not be tracked, nor the response updated.
- **UC-User Clarification:** IBM is unable to respond to the request as defined. IBM may not consider the request further until it has been revised and clarified. The reply will be accompanied by additional information stating why IBM is unable to respond at this time.

****NOTE:** FO and LR are considered obsolete and new requirements should never receive this vendor response.

- 5) *Finalize voting: Project staff calculates the priority based on the votes cast. Based on the votes each requirement is either "Retired", or "Submitted to Provider".*
- 6) *Submit to Provider: Project staff updates the fields that route a requirement to the appropriate area within IBM (FITS). [Note: FITS stands for Framework for Integrated Tests, which is a testing platform to allow communication between the developer and the person who creates the requirement.]*
- 7) *Waiting for Response: Requirement has been submitted to IBM.*
- 8) *Provider Responded: Response fields have been updated with response from IBM. The response codes include: AV-Available, AN-Announced, AC-Accepted, RC-Recognized, FO-Future Objective, LR-Long Range Consideration, SG-Suggestion, RJ-Rejected. Over time a requirement can receive multiple responses from IBM. See [Help: IBM Responses Defined](#) for a more detailed description of the response codes. [We've included these responses in Figure 2.]*
- 9) *Retired: Periodically the Project Staff will review requirements that remain in Provider Responded status. Reasons for retiring requirements include: requirements is now AV-Available or requirement is no longer relevant. After review requirements can be moved "back" to step 3 to repeat the "cycle".*

Two additional notes on this *Help* item:

- The *Open for Discussion* and *Open for Voting* time period is usually a month.
- Response codes of FO-Future Objective and LR-Long Range Consideration are no longer assigned, but are still present on older requirements.

Once you select a project, you'll see a screen similar to that shown in Figure 3. This is the *Actions Menu*, which shows what actions you can currently take. You can see that there are no requirements open for discussion, three open for voting, and seven waiting for a response from IBM. There are also thirteen responses that have been posted since June 2009. The top line of the summary is where you would add a new requirement, which we'll discuss in the next section.

[SHARE Home Page](#)

By clicking in the left column for *Cast Your Vote*, *List Requirements*, and *View Responses since 2009-06*, you will then see more information about the requirements.

To view all of the requirements, select the top menu button called *By Status*. Figure 4 shows the status of the MVSE project requirements. We've discussed the *Open for Voting* and *Waiting for Response*. The *Deleted* row indicates requirements that were deleted by the submitter, and the *Retired* row should show those that have been made available or were removed because they're no longer applicable. The MVSE project is currently reviewing all of their requirements, and many more will be added to the *Retired* category soon. The 781 requirements marked as *Provider Responded* indicate those that were responded to by IBM. This page simply lists the total responses, but

by clicking on the link at the right (I prefer *List by Response Code*), you can see the list by response code. That sample is shown in Figure 5.

Figure 4 – MVSE Project by Status

Two of the areas that I find most interesting are the AN-Announced and AV-Available. These are things the people wanted IBM to change, and IBM has changed them. This really shows the industry influence that SHARE requirements have.

When you click on the name of a requirement, you can see the full description. The first part of one is shown in Figure 6. This particular requirement was open for voting when this article was being written. The person who created the requirements entered most of this information (all except the Requirement # and the Status).

Figure 6 – Requirement SSMVSE09011 (while open for voting)

Display Requirement: SHARE Requirements | 12/23/09 7:44 AM

SHARE Requirements: Display Requirement
Close Window

Requirement#:	SSMVSE09011
Status:	Open for Voting
Title:	set CPENABLE=(10,30) in IEAOPTxx default or default by HW config
Description:	<p>The IEAOPTxx PARMLIB member is an area where a number of critical performance related parameters may be set. One of these is the CPENABLE value. The default for this parameter today is 0,0 which is contrary to a long standing recommendations from IBM experts at the Washington Systems Center. Refer to http://www-03.ibm.com/support/techdocs/atsmastr.nsf/WebIndex/FLASH10337</p> <p>The default for the CPENABLE option should be 10,30 or should be determined dynamically based on the z/OS and hardware configuration.</p>
Benefit:	Insure customers are not deprived of value by old defaults or incorrect settings of difficult to understand operating system parameters.
Time Limit:	None
Solution:	Left to the developers but perhaps in the short term simply changing the single default to match the long standing recommendation from IBM WSC of 10,30 would be simplest. Ideally we would like this to be set dynamically based on the hardware configuration to whatever IBM determines the optimal value. Only in rare instances should installations code and override the SRM/WLM determination of the "best" value, which are based on benchmark testing by WSC and IBM labs.
Impact if no solution provided..:	Customers will need to override the default parameters for processors IBM has been shipping for years, or miss out on the value provided by the update.
ENVIRON:	z/OS
Classification:	T
Business Solutions:	4
Investment Protection:	4
End User Productivity:	4
Growth Enablement:	3
Systems Management:	5
Explain High or Low Values:	Simplification is a key effort for IBM. Having an esoteric but important "knob" that customers must set that is wrong by default and can be determined by the systems is inconsistent with the current direction. The handling of this option reflects 1980's systems management style.
Product Name:	z/OS
Product Code:	5752SCWLM
Reference Information:	MR0827095257
Keywords:	IEAOTPXX,PARMLIB,CPENABLE,WLM,SRM,TPI,LPAR,BASIC,IEAOPT00

Status: *	Initial
Title: *	<input style="width: 90%;" type="text"/>
What is the requirement or need? (Complete, detailed description) Describe the want, need, or problem you are addressing and include any unique usage or objectives that will help the developers understand it. Do not assume it is obvious! Please do not describe a solution here.	
Description: *	<input style="width: 95%;" type="text"/>
Why is it important to solve this requirement? What are the benefits to the business, enterprise, or users? Include benefits in terms of business, technical, financial, or usability implications. If possible, quantify the business value of the solution.	
Benefit: *	<input style="width: 95%;" type="text"/>
Is there a time limit on delivering a solution? If so, what is it and why? Do you foresee a technology change that would obsolete this requirement?	
Time Limit: *	<input style="width: 95%;" type="text"/>
Suggestion, if any, for the solution? What would the best solution look like? What is a desirable solution? An undesirable solution? How will you know when you get the solution? (Optional)	
Solution:	<input style="width: 95%;" type="text"/>
What is the impact if the vendor does not provide a solution? On the business? The users? Are there alternatives that have been implemented or considered (from another vendor or roll-your-own)? (Optional)	
Impact if no solution provided: *	<input style="width: 95%;" type="text"/>
ENVIRON:	<input style="width: 95%;" type="text"/>
Long-Term/Strategic, Tactical-necessary for immediate use, Suggestion (no formal response required), Acceptability	
Classification: *	<input type="radio"/> Long-Term/Strategic <input type="radio"/> Tactical-immediate use <input type="radio"/> Suggestion <input type="radio"/> Acceptability
Business Solutions: *	<input type="radio"/> 1 <input type="radio"/> 2 <input type="radio"/> 3 <input type="radio"/> 4 <input type="radio"/> 5 (1) is low value, (5) is high value.

Once the requirement has been reviewed and approved by the project coordinator, it will be posted in the Open for Discussion section where other people can comment on it. When discussion is completed, the requirement will be moved to the Open for Voting status, where other SHARE members will vote it on.

This ability to influence IBM's direction is one of the major benefits of SHARE, and you can participate in the process in several ways. We hope you do. ■
