IBM Software Group

Understanding The Impact Of The Network On z/OS Performance

Ed Woods - IBM Corporation

Session 10680

Tuesday 9:30 AM

Tivoli software

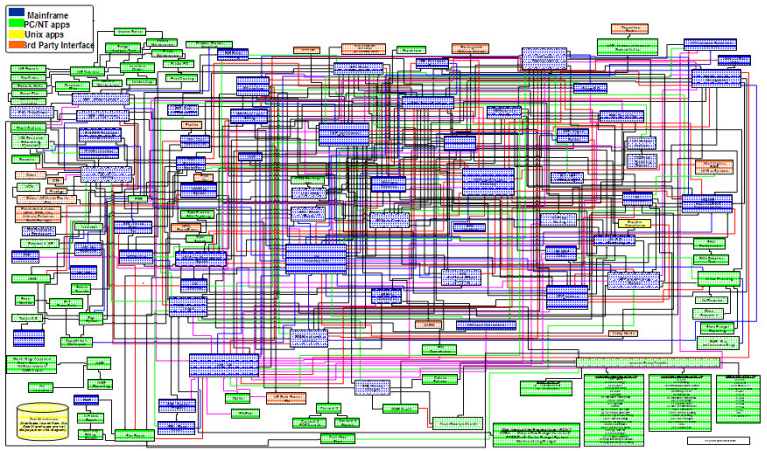
Agenda

- Introduction
- Looking at the application time line
- Examples of mainframe/network interaction
- Analysis scenario using commonly available commands
- Optimization examples
- Defining a consistent monitoring strategy

The Challenges Of Performance And Availability Management Of Complex Systems

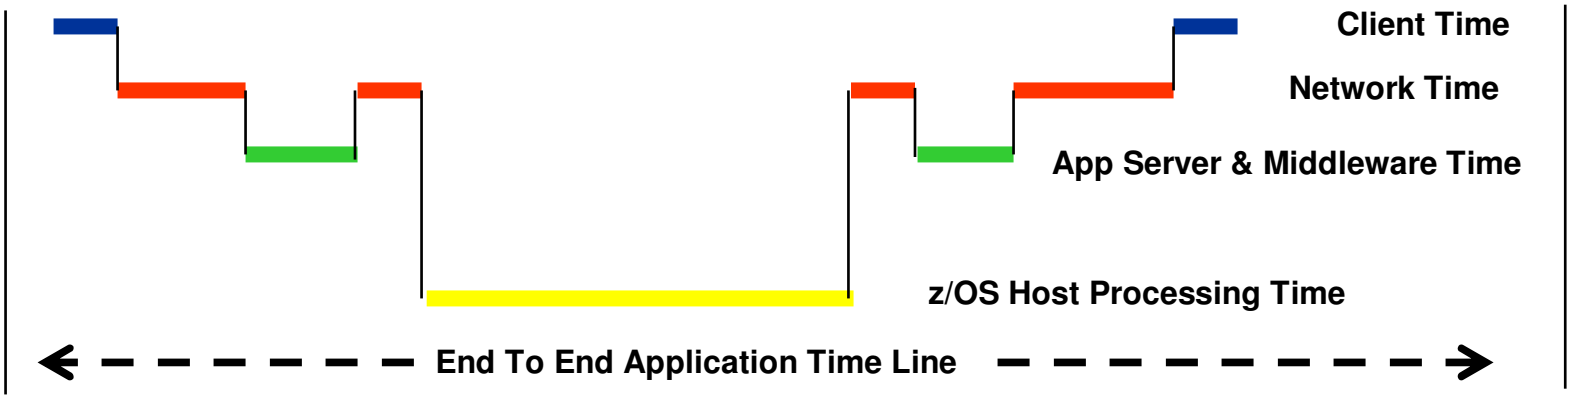
- Most new applications are composite by design
  - Applications cross multiple subsystems and platforms
  - Integration and utilization of multiple core technologies
  - Pose challenges from a management and monitoring perspective

- Common Technical Challenges
  - Multiple platforms
  - Potentially multiple DB systems
  - Middleware considerations
  - One or multiple network hops



- *Is the problem the network, the host, the DB, the client, or somewhere in between?*

The Network And The Application Time Line

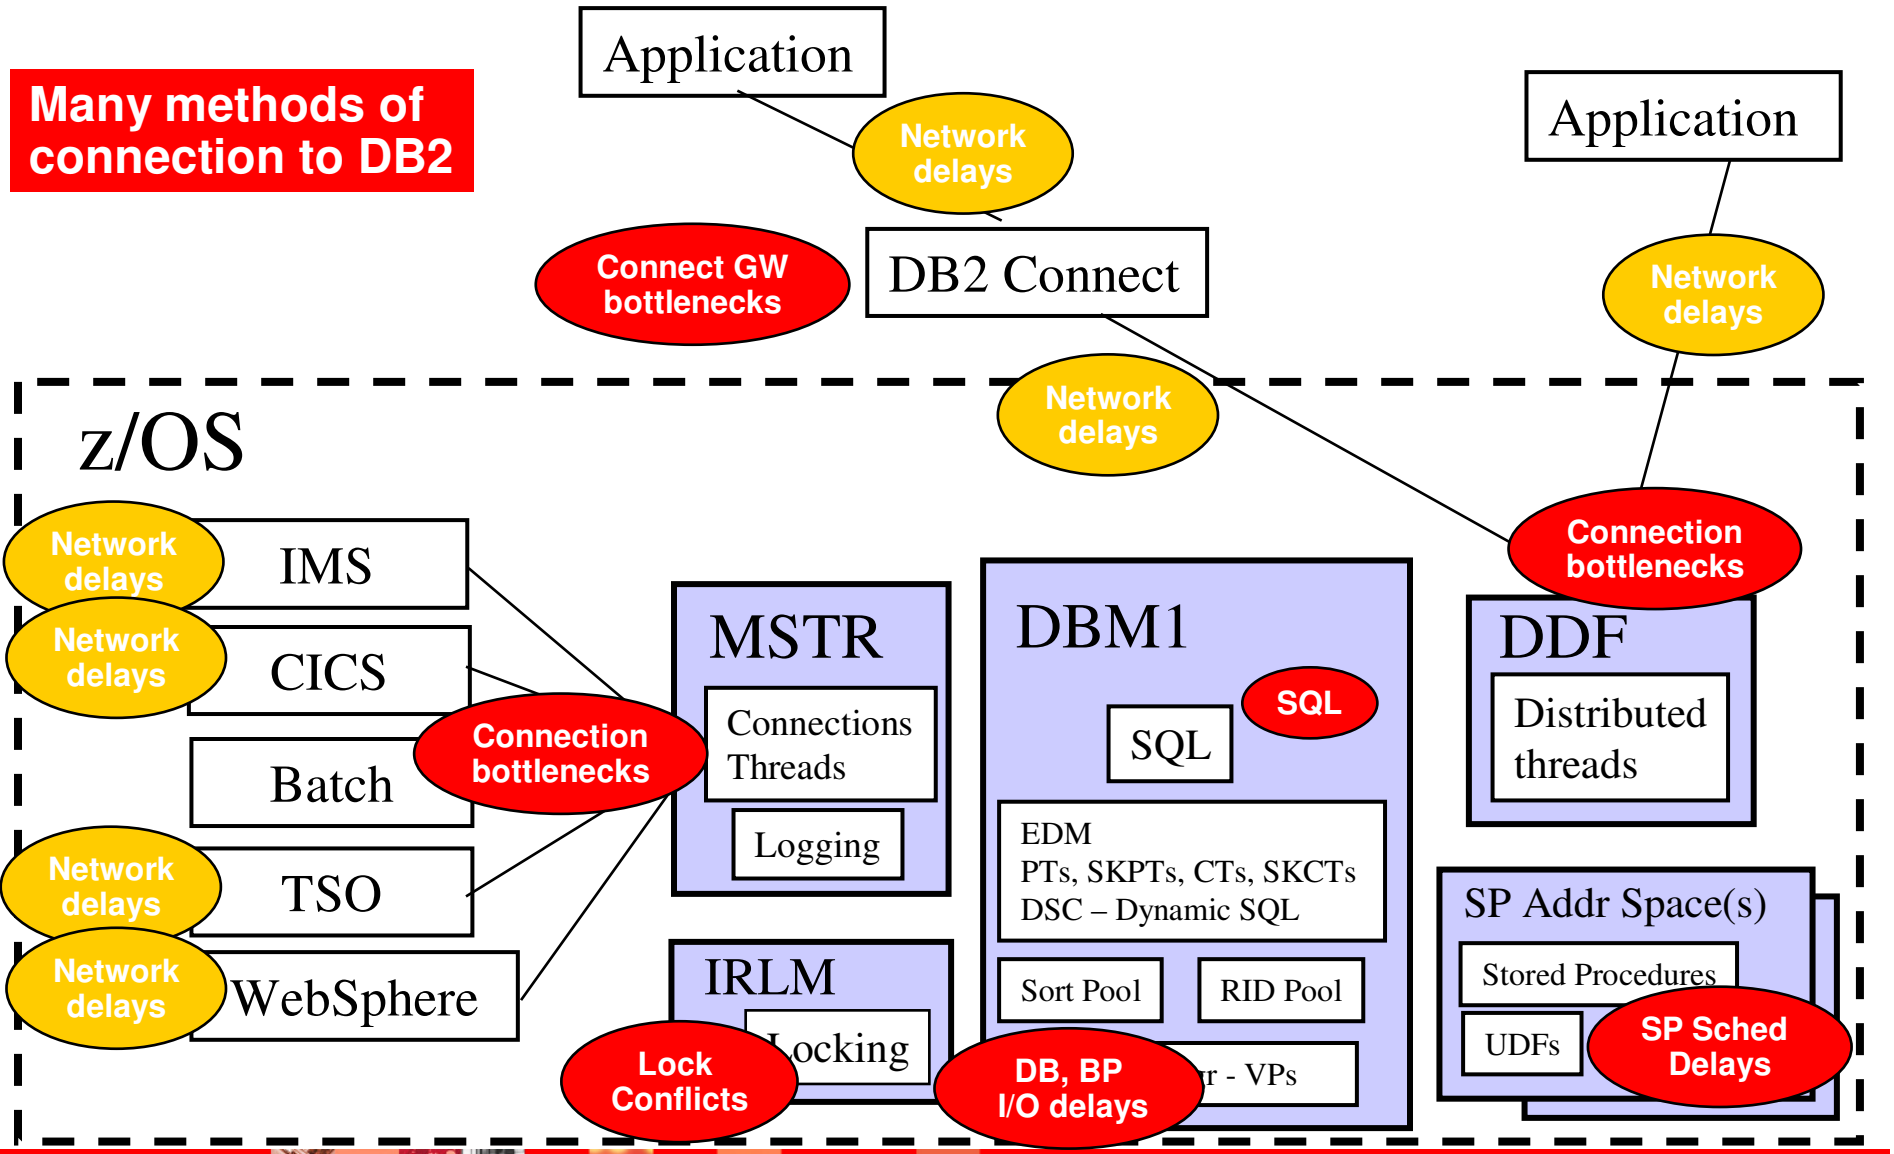


- Portions of response time may reside in any of the following
  - End user client processing, the application server or middleware level, the database, or other aspects of host z/OS application processing
  - Potential for bottlenecks at multiple points
- The network will impact the overall application time line
  - Time is required to send messages across the network
  - Overhead processing, including communication subsystem session management
  - Network hardware, traffic, connections, connection pools

The Impact Of The Network On Critical z/OS Components

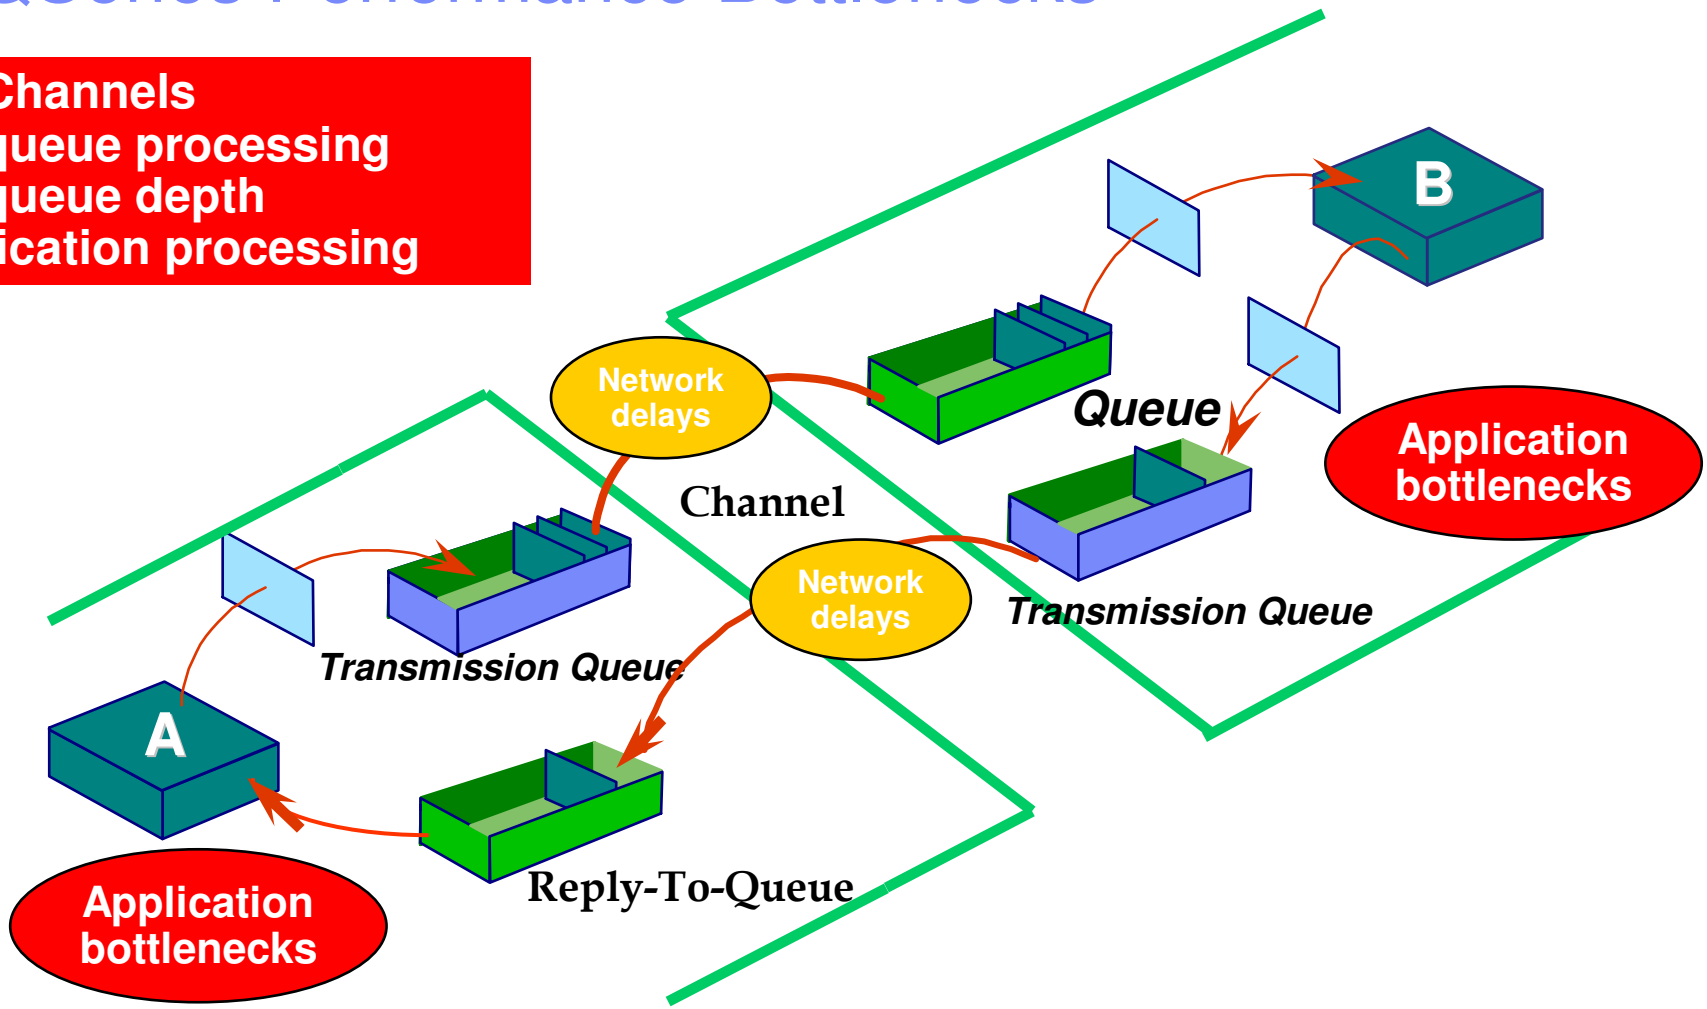
- The network has impact on z/OS workload in many ways
- Each z/OS application or component subsystem has unique network considerations
  - IMS
  - DB2
  - CICS
  - MQSeries
  - WebSphere
  - FTP
- Keep in mind that z/OS application/subsystem configuration and logic may also impact the network
  - Also, be aware of the potential impact of SSL and IPSec

DB2 Has Several Potential Performance Bottlenecks

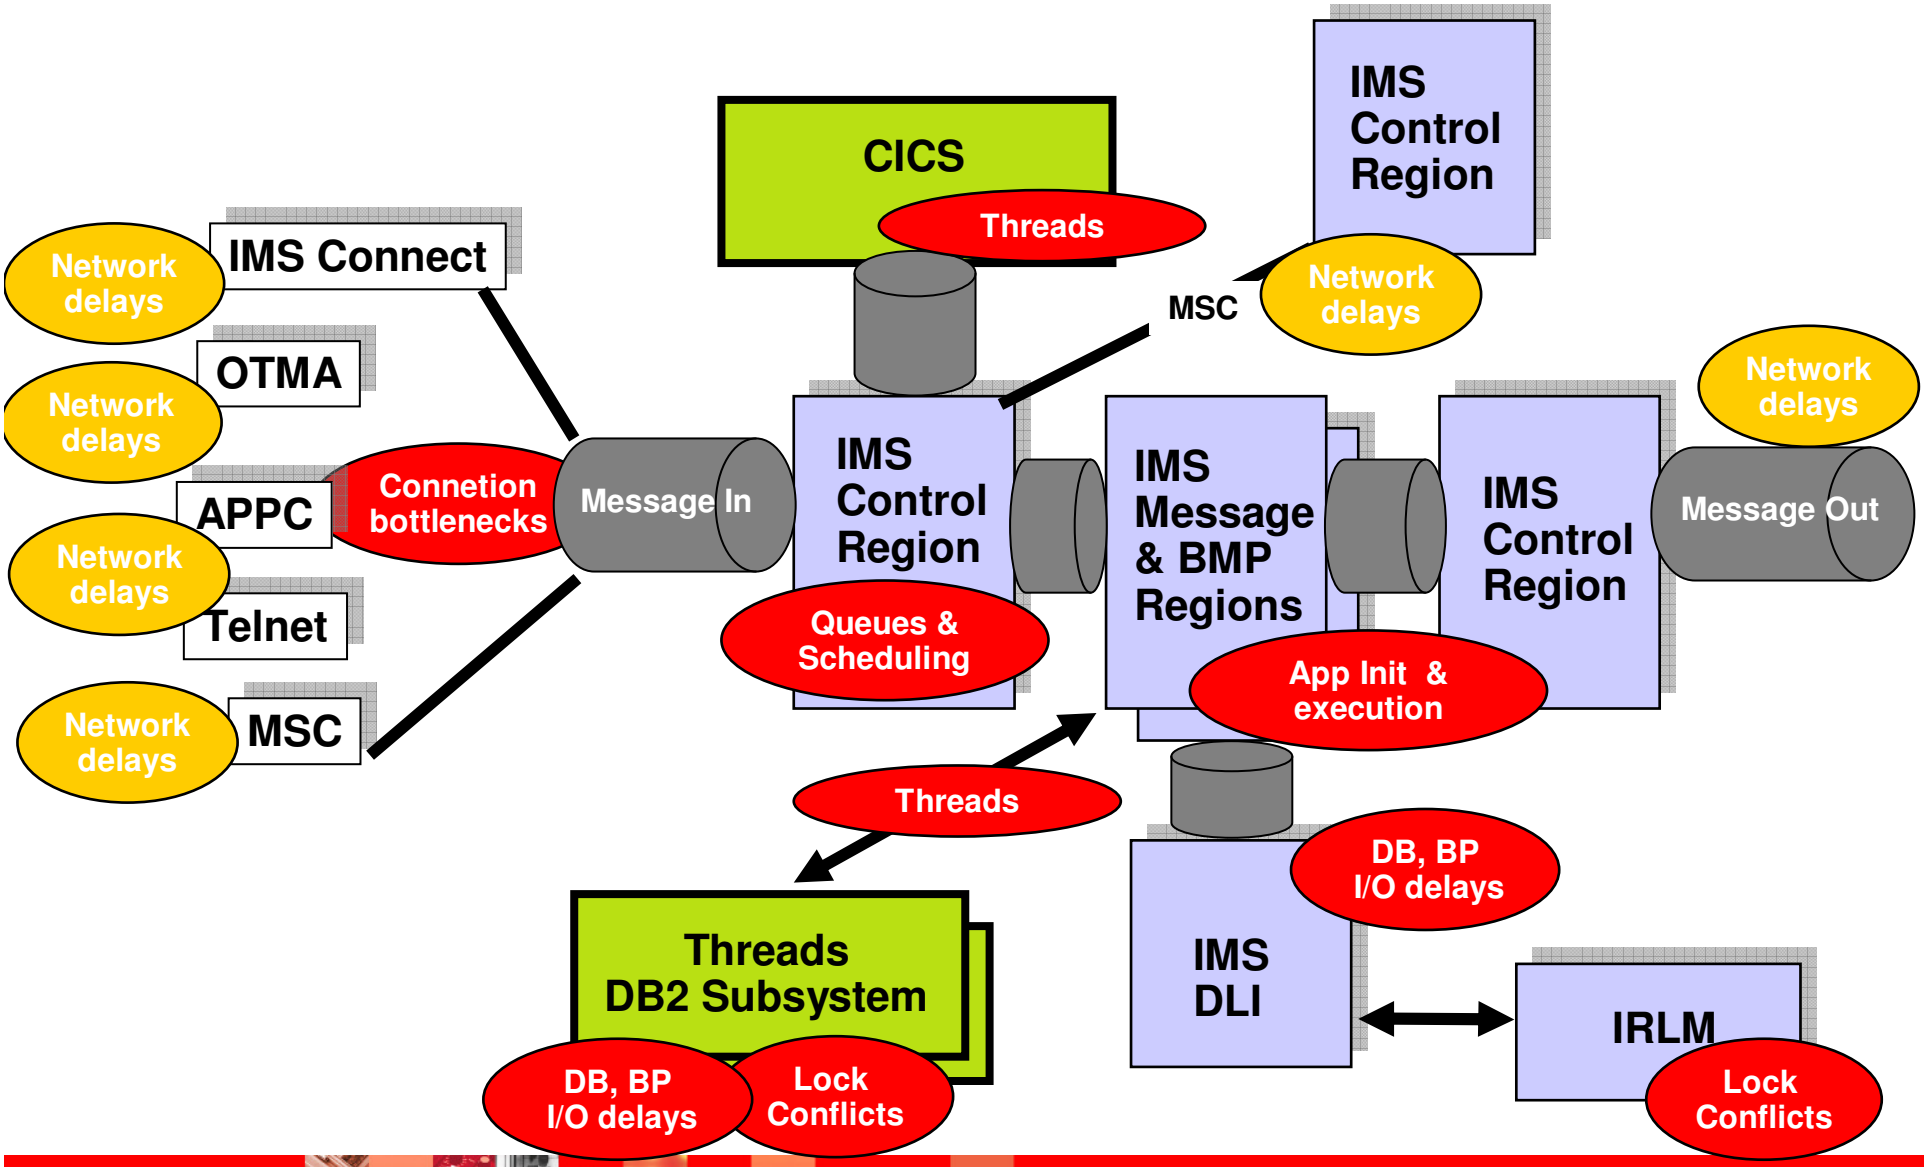


MQSeries Performance Bottlenecks

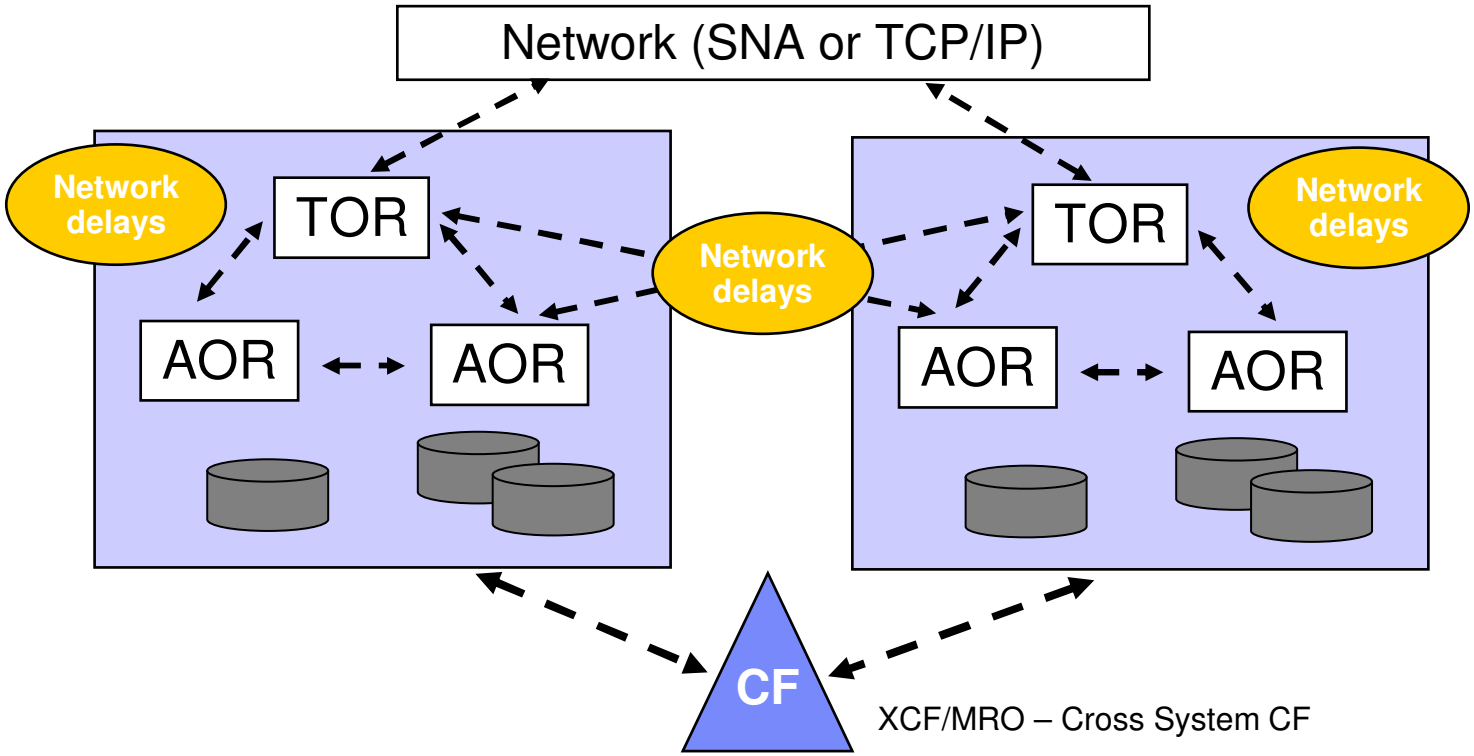
MQ Channels
MQ queue processing
MQ queue depth
Application processing



IMS Has Many Potential Bottlenecks (Including Network)

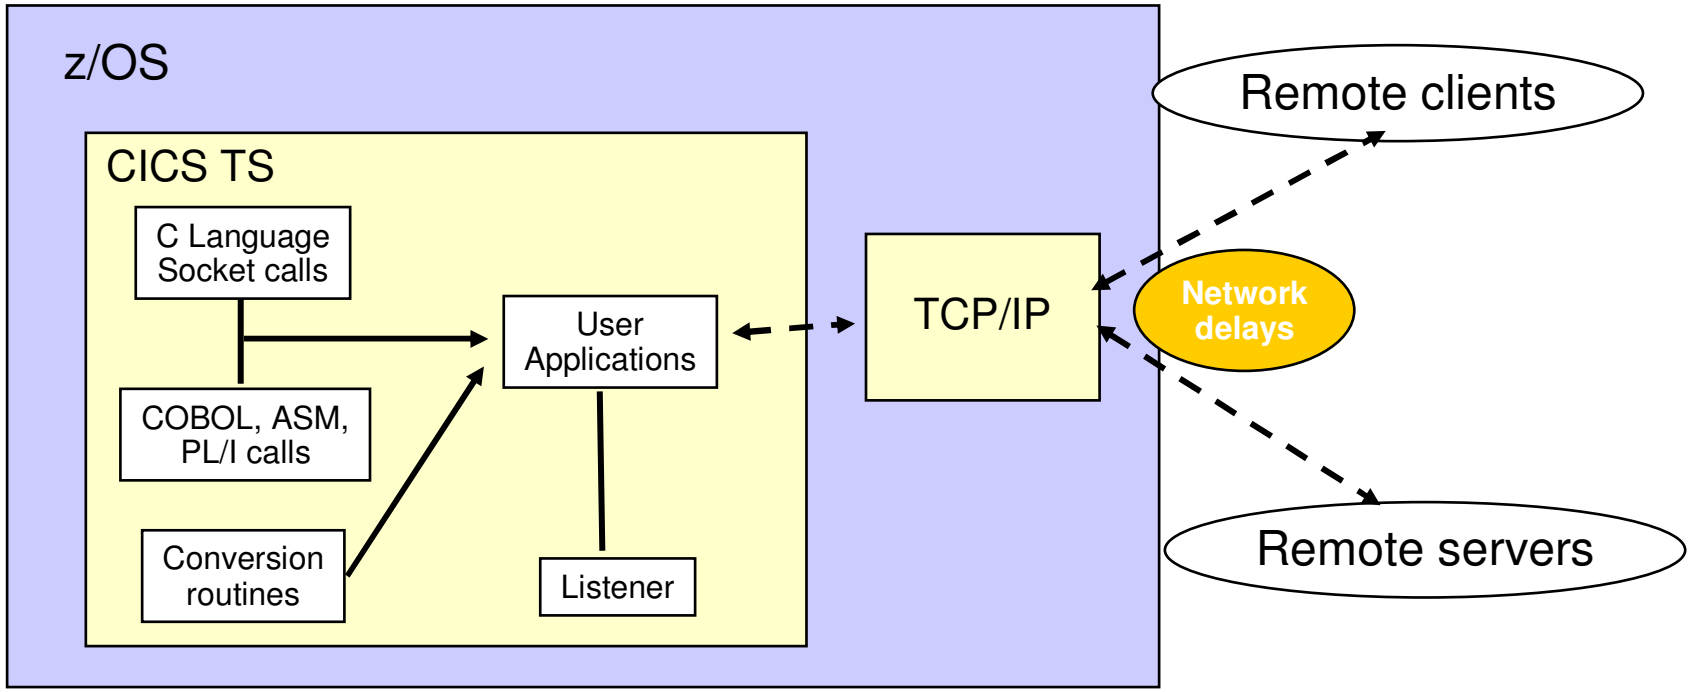


The Network Impacts CICS Processing



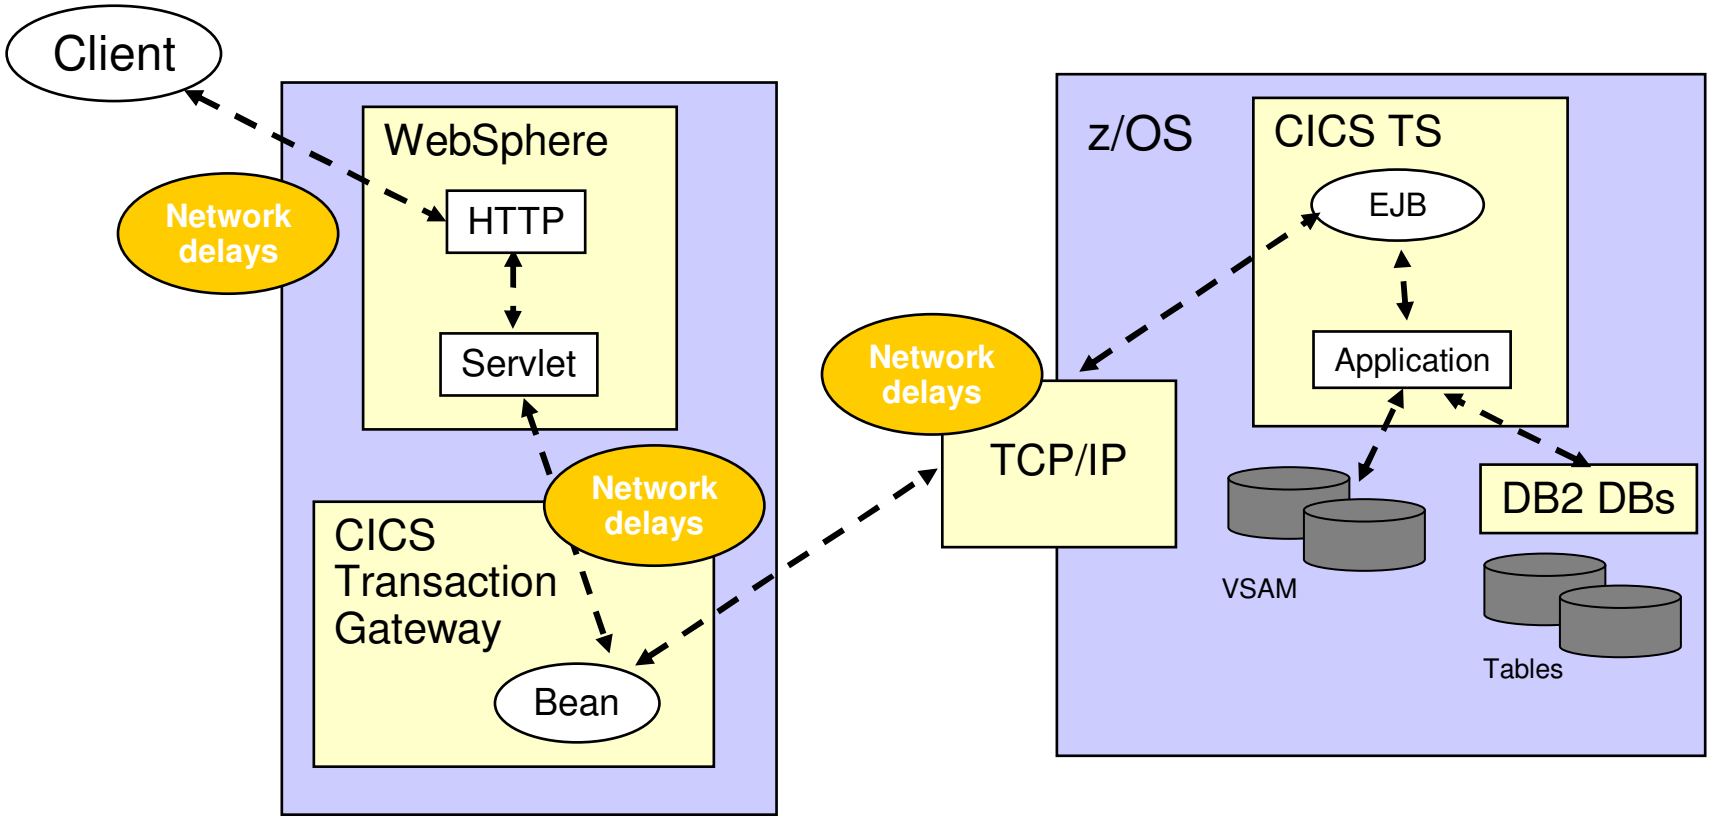
- Network potentially impacts CICS in a variety of ways
  - Connections to CICS – connections via a variety of means
  - Communication within CICS - ISC and MRO
    - InterSystems Communication - system to system, Multi-Region Operation - region to region, and IPIC – IP InterCommunications

CICS Socket Interface Example



- Socket API available for C, COBOL, PL/I and ASM applications
- Listener is a CICS transaction
- Conversion routines – ASCII/EBCDIC

A WebSphere Example With CICS Transaction Gateway



An Example - Looking At The Numbers
DB2 Distributed Performance
Statistics Trace Data For The DB2 Subsystem

```
>                    DISTRIBUTED DATA FACILITY STATISTICS

==========================================================================================
```

Note the quantity of data being sent

Note row versus message/block counts to determine blocking

Recv – received into DB2
Sent – out to client/app

 # SQL calls

# of messages sent

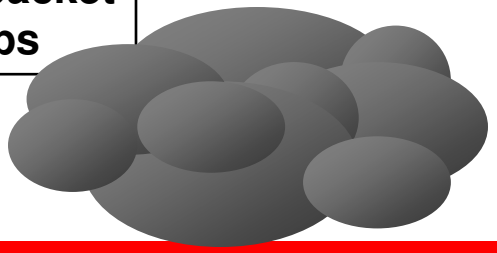
DRDA blocks for queries

Network Analysis Tools
PING Command

- PING is a simple, but highly useful command
- Verifies connection between hosts by sending ICMP packets to the specified address (IP address or hostname)
- PING shows the time to echo a packet
- Beware - in some shops PING may have limitations

```
64 bytes from 198.210.45.27:icmp_seq=0  ttl=253  time=0.345 ms
64 bytes from 198.210.45.27:icmp_seq=1  ttl=253  time=0.345 ms
64 bytes from 198.210.45.27:icmp_seq=2  ttl=253  time=0.345 ms
```

PING *hostname* -l	**# of bytes in echo packet**
PING *hostname* -n	**# of packets to echo**
PING *hostname* -r	**record the route of the packet**
PING *hostname* -s	**report timestamps of hops**



Network Analysis Tools
NETSTAT Command

- NETSTAT reports TCP/IP connections and protocol statistics
- Get status information on connections and statistics on packets sent, packets received, fragmentation, etc…..

NETSTAT command issued from client perspective.

```
C:\Documents and Settings\woodse>netstat

Active Connections

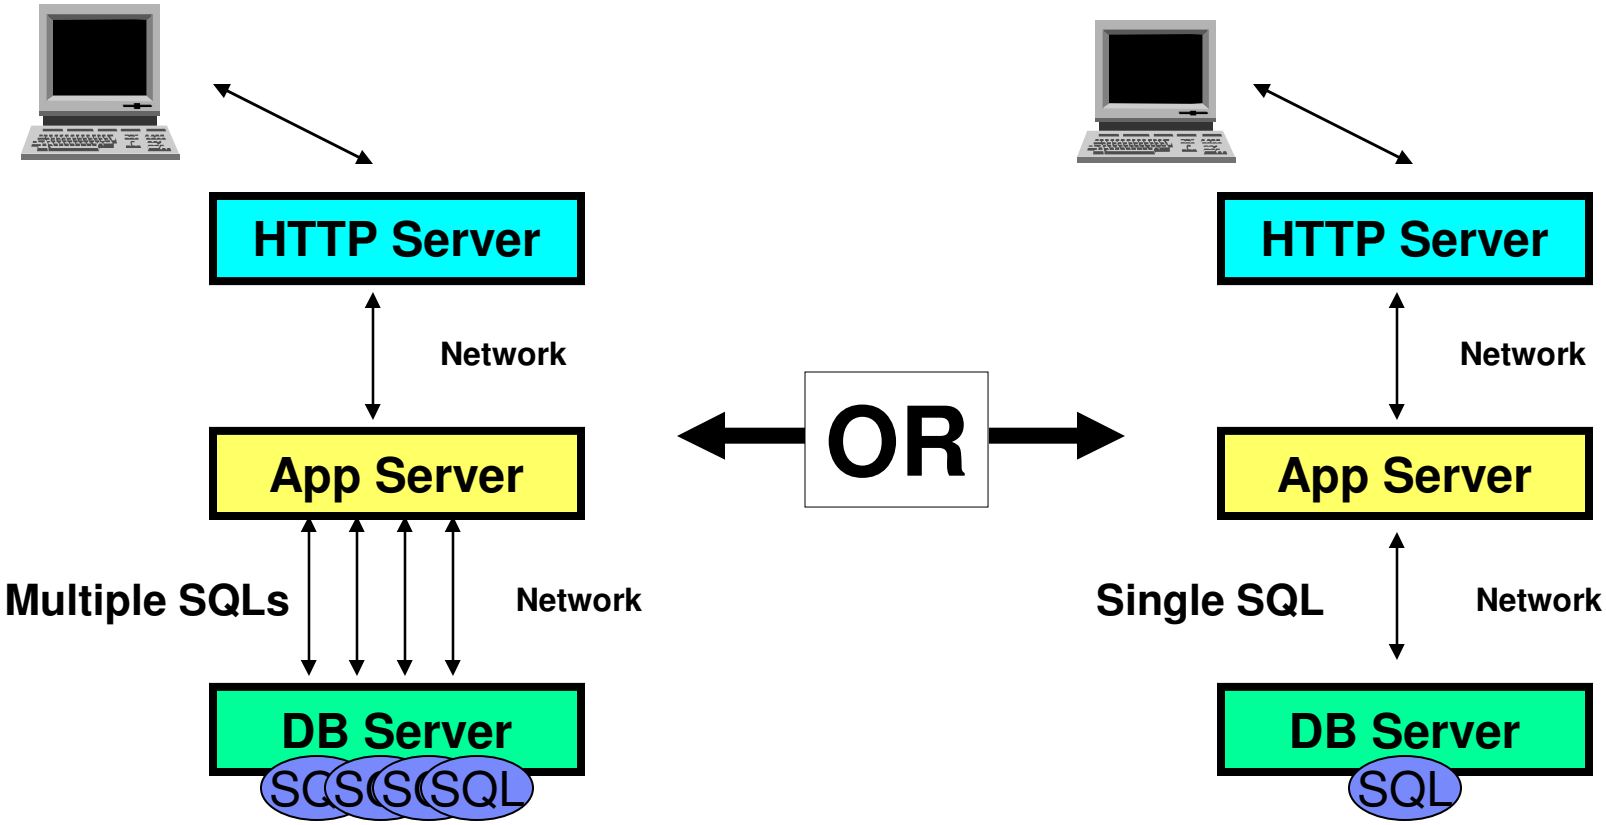
Byte counts

Network segment counts

Network response time info

Retransmission count

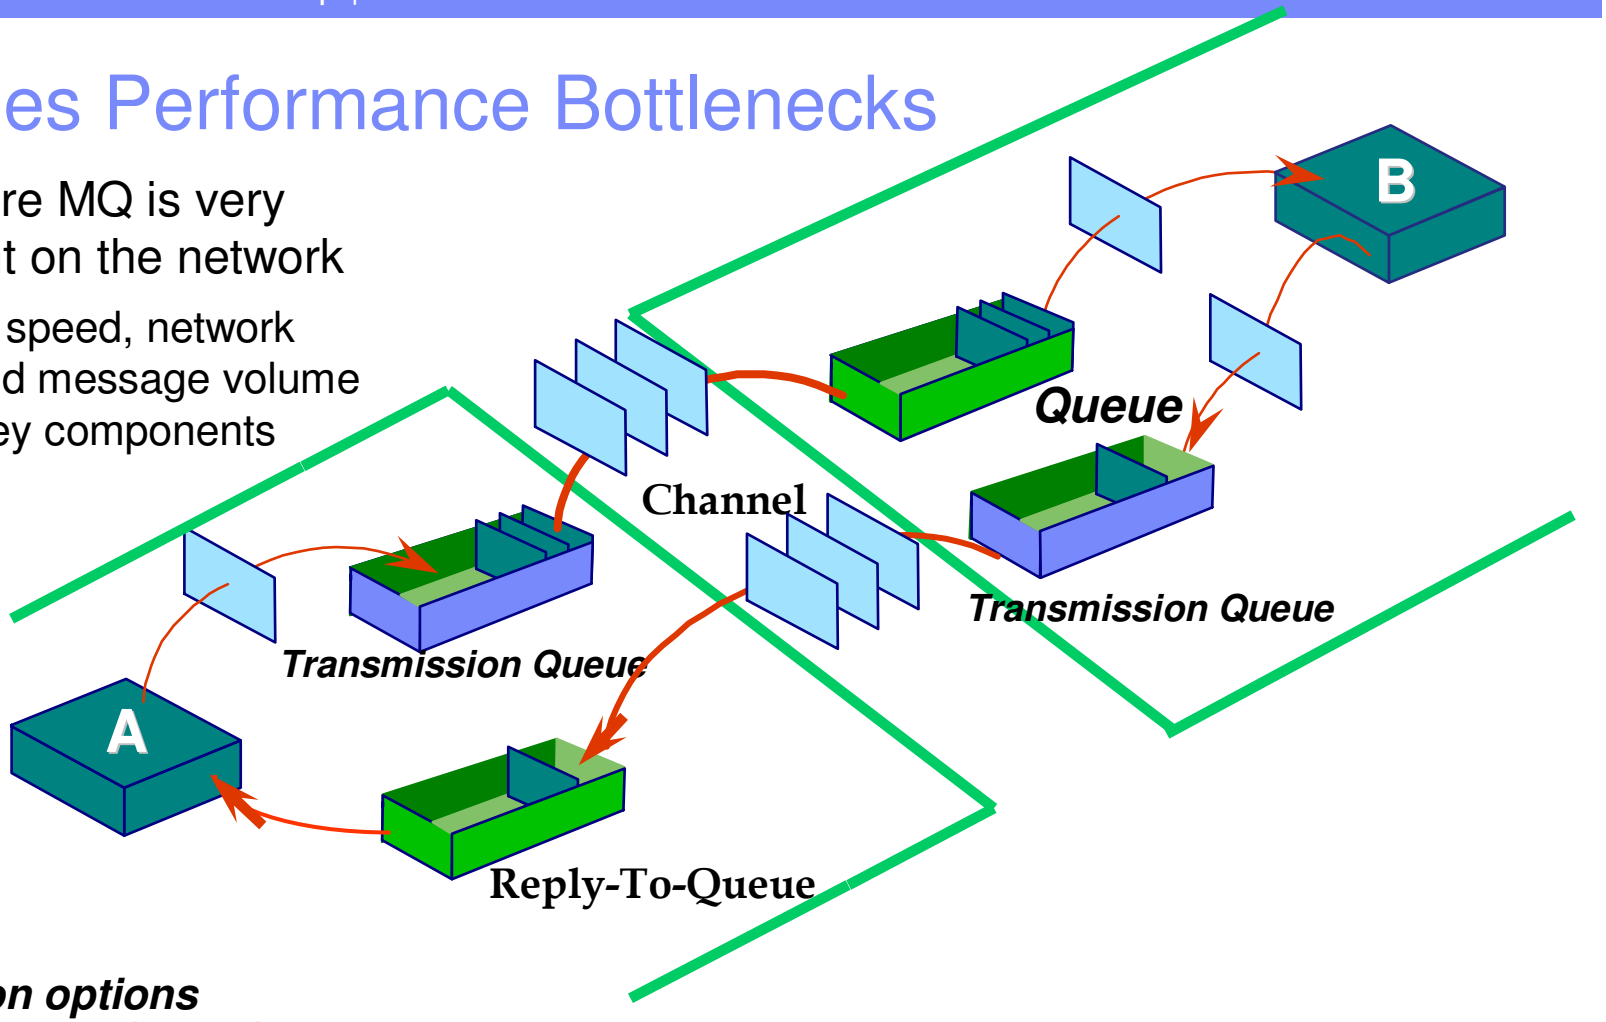
Example - Optimize DB2 Applications To Minimize Network Traffic



- Do more with SQL to eliminate redundant back/forth activity
- Crossing more layers will mean more overhead
- Don't put too much business logic in the DB layer

MQSeries Performance Bottlenecks

- WebSphere MQ is very dependent on the network
  - Network speed, network traffic and message volume are all key components



Optimization options

Increase network speed

Compress messages - decreases network transmission by reducing the size of the message.

Channel parameters

Batch size defines the maximum number of messages sent within a batch.

Reduces the amount of channel processing required.

Note – batching for small applications may result in delays and spikes

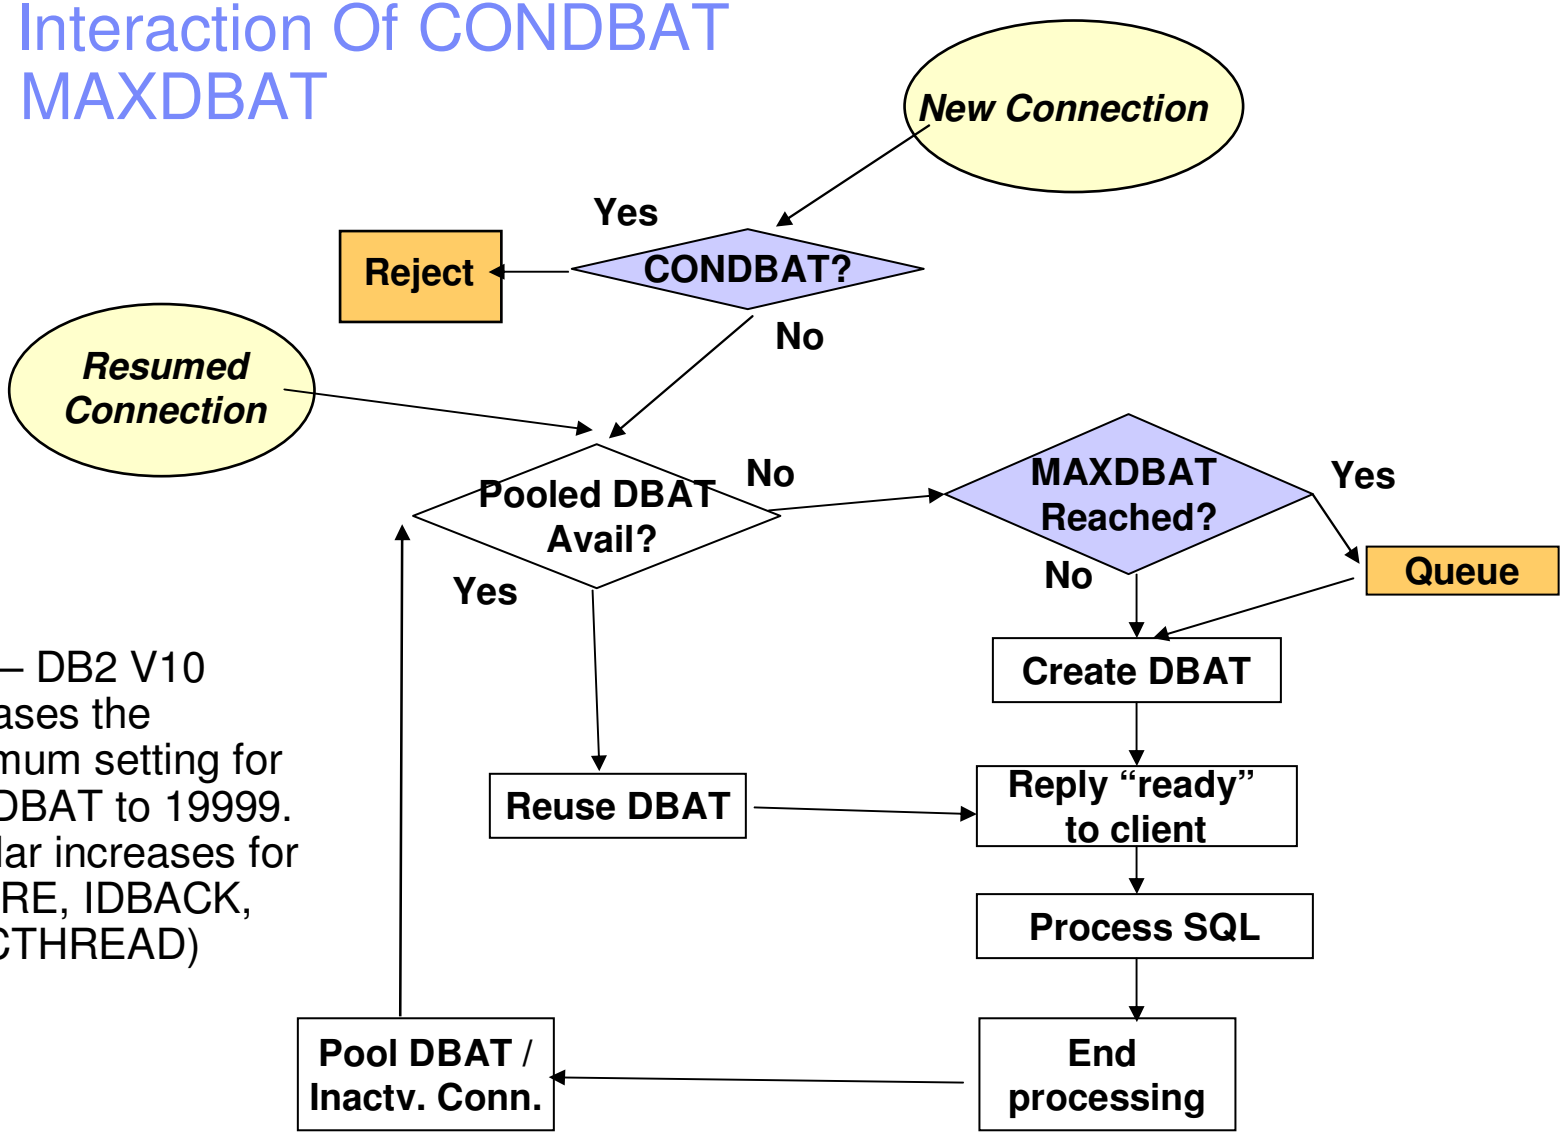
Many Factors May Impact Response Time

- Host processing bottlenecks
  - Transaction bottlenecks, application failures/stopped resources, high I/O and poor BP ratios, transaction/message queues, concurrency/lock conflicts
- Network performance
  - Network congestion, data fragmentation, data retransmission
- Network hardware issues
  - Adapter hardware errors, hardware configuration errors, hardware congestion issues
- Application subsystem connection issues
  - Application errors, subsystem configuration errors
- Application issues
  - Application design and logic problems

z/OS Application Configuration Considerations That May Impact Interaction With The Network

- CICS MAXSOCKETS
  - MAXSOCKETS SIT parameter specifies the maximum number of IP sockets that can be managed by the CICS sockets domain
- IMS Connect parameter MAXSOC
  - Total number of sockets IMS Connect supports across all ports at the same time
  - Note - USS parameter MAXFILEPROC must be equal to or greater than the value of the IMS Connect parameter MAXSOC
  - IMS Connect issues warning message HWSS0772W when the number of sockets reaches the default warning threshold of 80 percent of MAXSOC
- DB2 thread connection DSNZPARMs
  - MAXDBAT – Max Remote Active
  - CONDBAT – Max Remote Connected
  - Thread creation will queue if exceeded
- Application logic issues and errors
  - Application errors that tie up finite connection resources

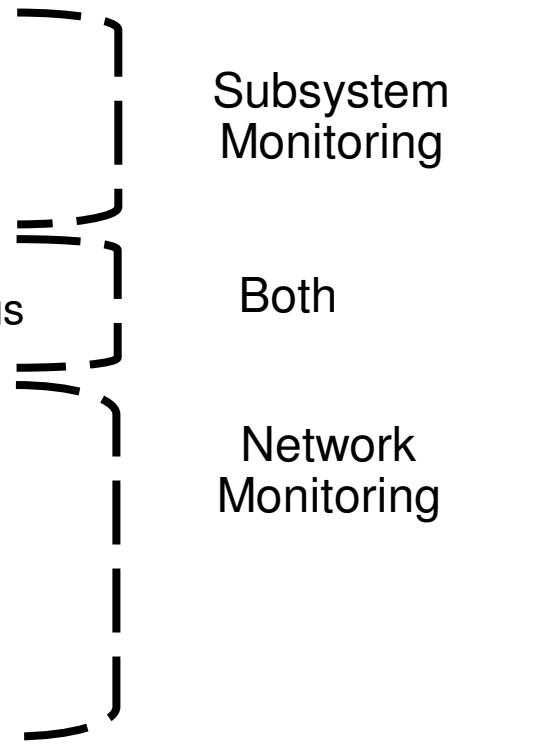
A DB2 Example
The Interaction Of CONDBAT And MAXDBAT



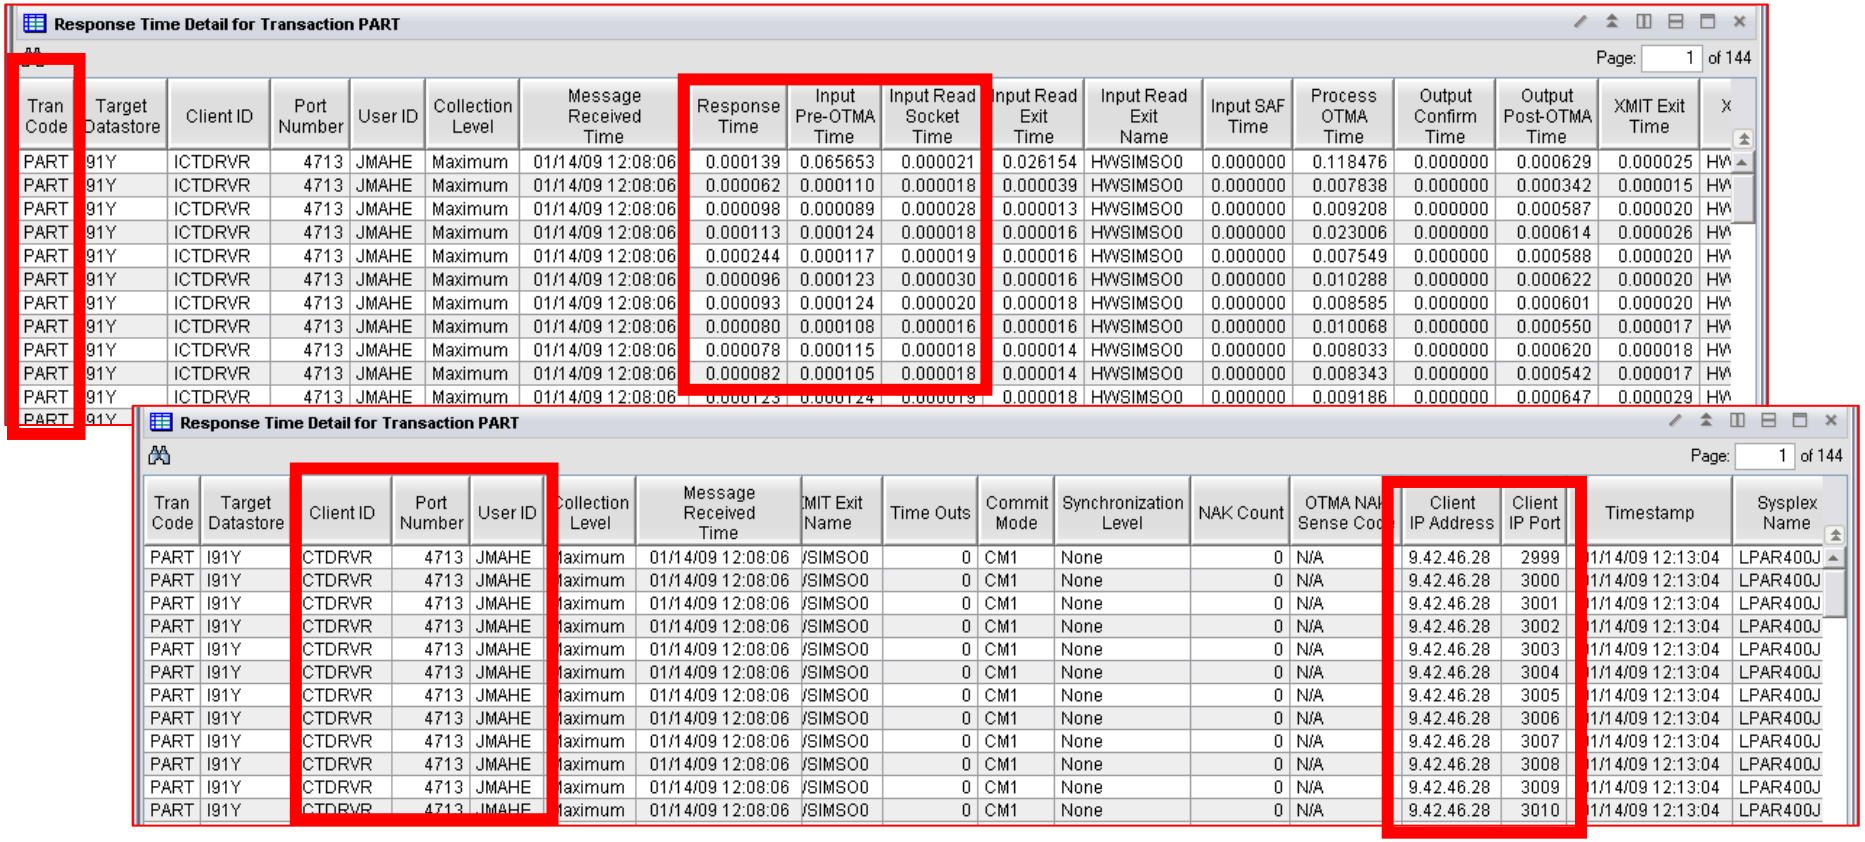
Note – DB2 V10 increases the maximum setting for MAXDBAT to 19999. (Similar increases for IDFORE, IDBACK, and CTHREAD)

Defining A Monitoring Strategy
Monitoring At Multiple Levels

- Monitor at the host application subsystem level
  - IMS, CICS, DB2, WebSphere, WebSphere MQ
  - Response time, transaction rates, message rates, queues
- Monitor host application network connection activity
  - Connection activity, connection counts, connection backlogs
- Monitor at the interface level
  - OSA adapters, error counts, fragmentation counts, retransmission counts
- Monitor at the network connection level
  - Response time, traffic counts, error counts, fragmentation counts, retransmission counts
- Integrate host and network monitoring
- Monitor from an end-to-end perspective



An Example - IMS Host Subsystem Level Monitoring Detailed IMS Connect Transaction Level



Response Time Detail for Transaction PART

Example - Understanding IMS Response Time

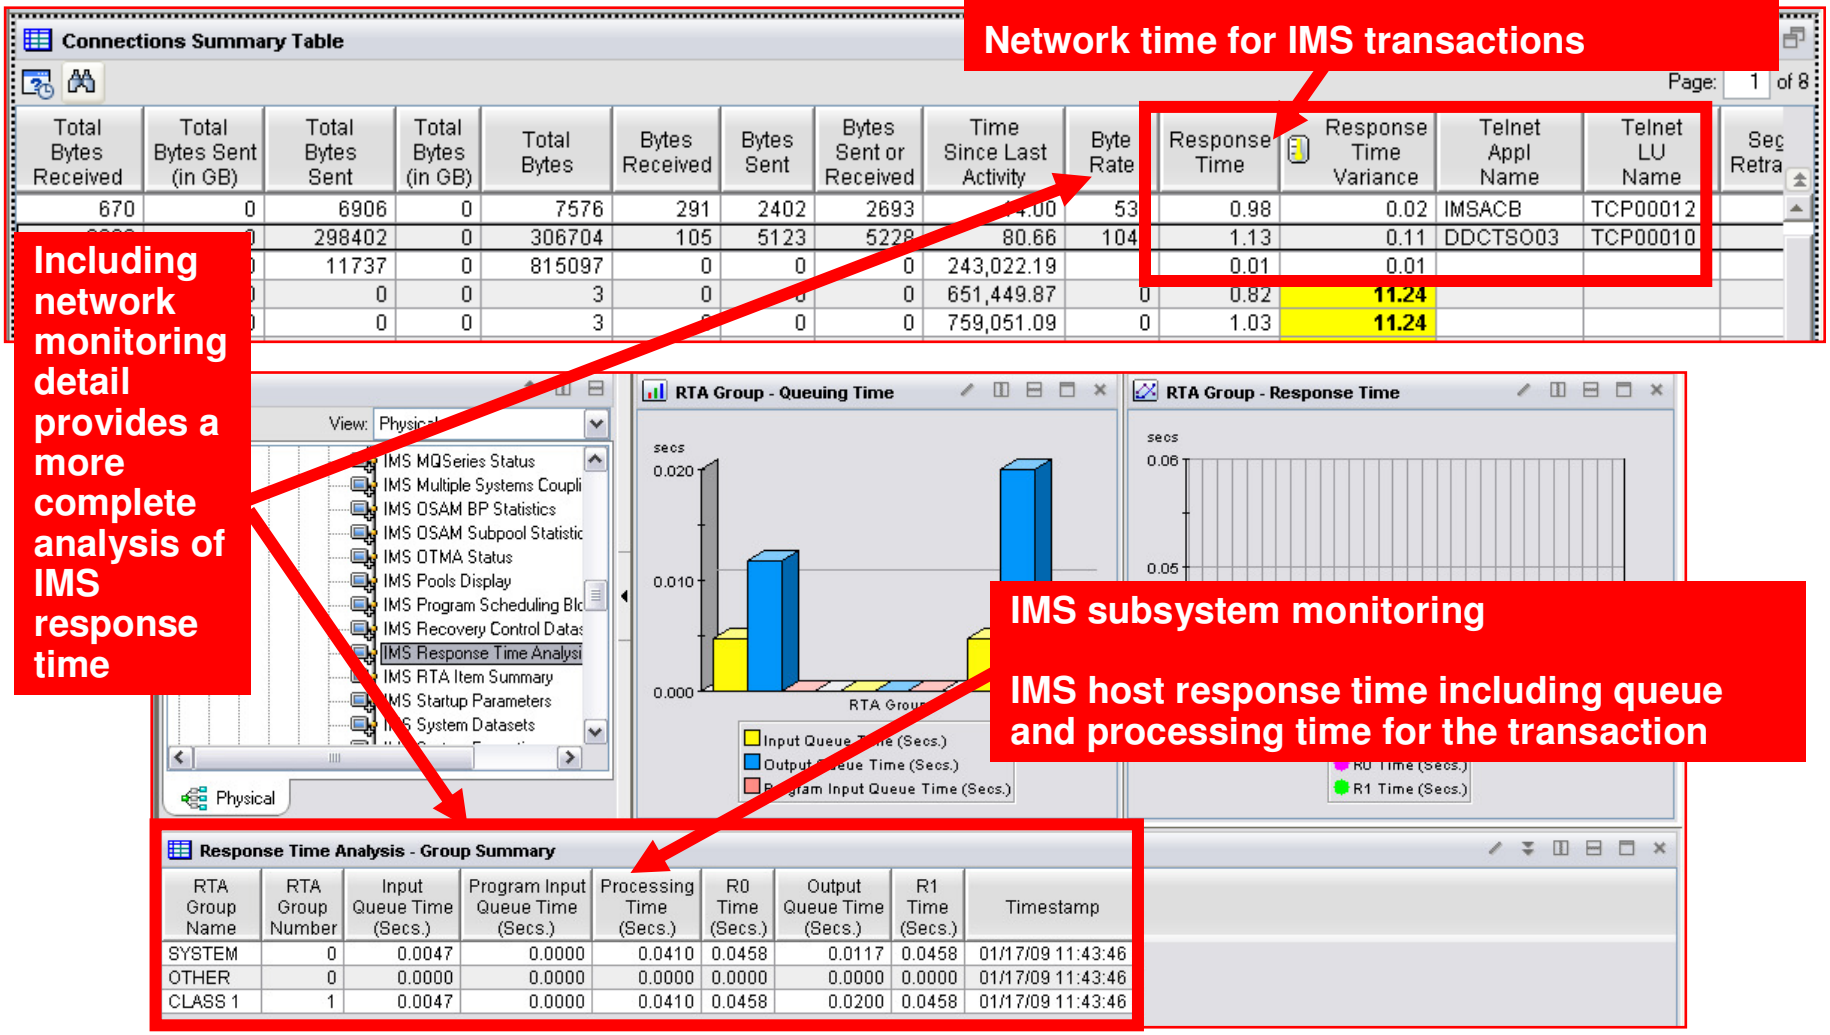
Mainframe network monitoring

Network time for IMS transactions

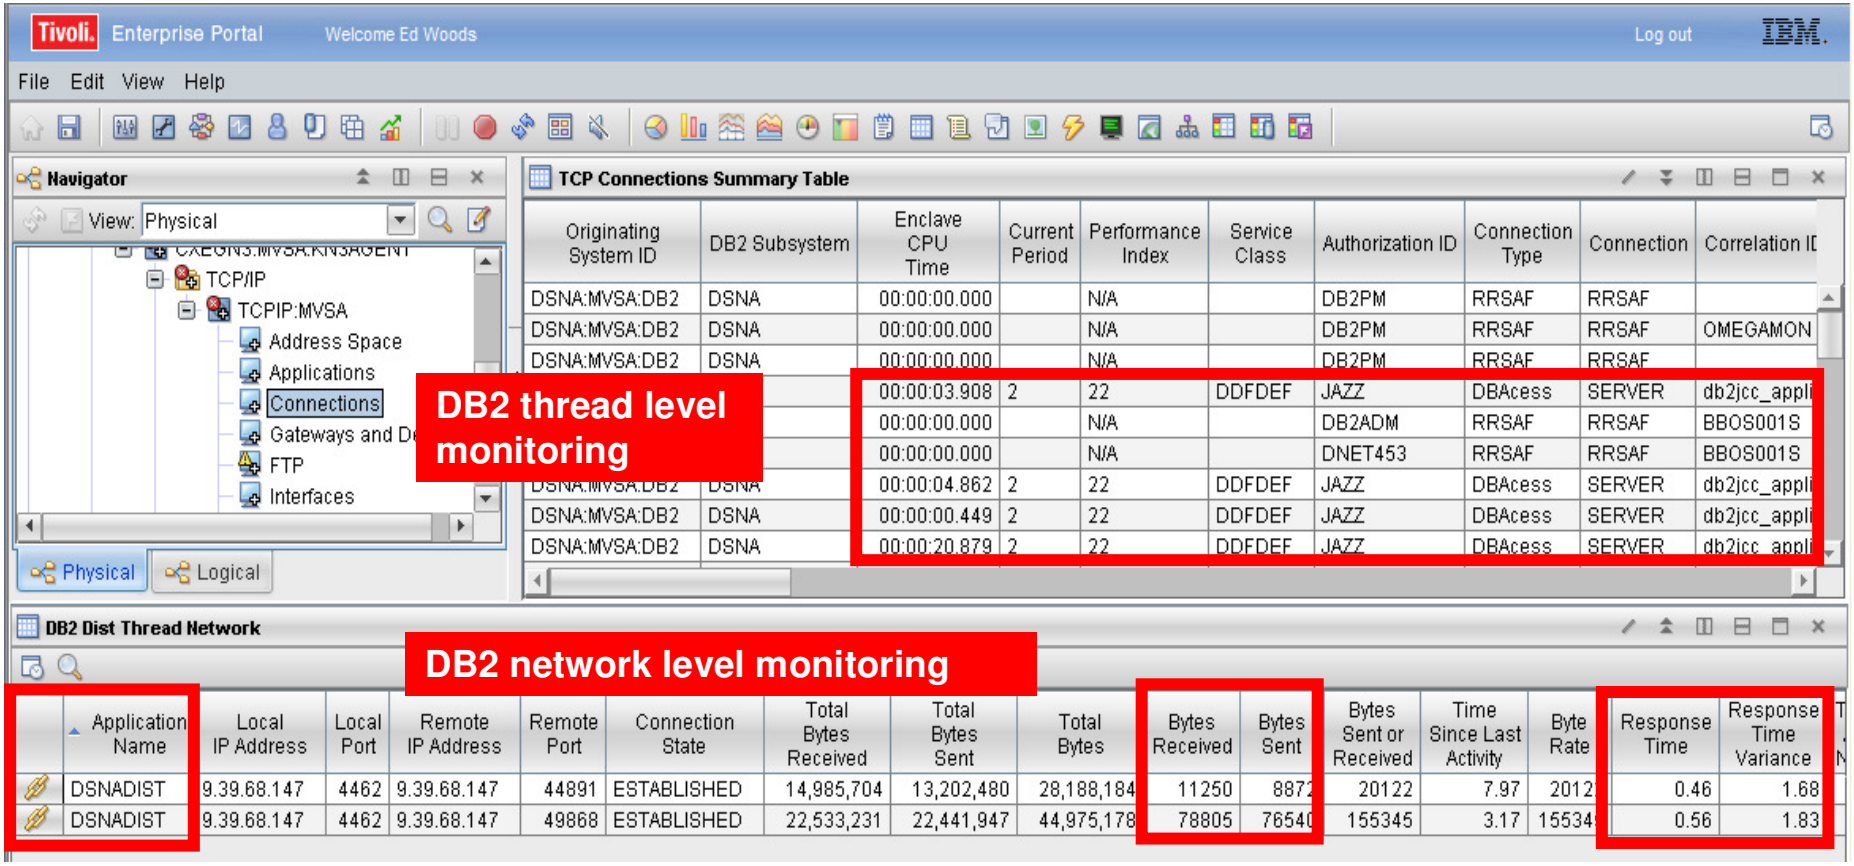
Including network monitoring detail provides a more complete analysis of IMS response time

IMS subsystem monitoring

IMS host response time including queue and processing time for the transaction



Another Example
Combining Host And Network Level Monitoring



Monitor Host Application Network Connection Activity

	Collection Time	Application Name	Connection Count	Active Connections	Accepted Connections	Connection Rate	Active Connection High Water Mark	Time stamp for Active Connections High Water Mark	Idle Time Since Last Accept	Time Since Last Activity	Server Up Time	Connections in Backlog	Backlog Connections Rejected	Total Backlog Connections Rejected
	03/08/12 12:32:21	CICSAOR2	3	0	0	0	0		3.18	0.00	456.94	0	0	0
	03/08/12 12:32:21	CICSAOR3	9	2	0	0	2	02/29/12 12:14:56	172.51	575.94	172.51	0	0	0
	03/08/12 12:32:21	CICSAOR4	4	0	0	0	1	03/07/12 12:22:21	456.94	0.00	456.94	0	0	0
	03/08/12 12:32:21	CICSAOR5	7	0	0	0	1	03/05/12 20:16:20	67.36	0.00	67.36	0	0	0
	03/08/12 12:32:21	CICSAOR6	3	0	0	0	0		17.42	0.00	17.42	0	0	0
	03/08/12 12:32:21	CICSAOR7	2	0	0	0	0		0.23	0.00	17.41	0	0	0
	03/08/12 12:32:21	CICSAOR8	3	0	0	0	0		456.94	0.00	456.94	0	0	0
	03/08/12 12:32:21	CICSAOR9	1	0	0	0	0		456.94	0.00	456.94	0	0	0
	03/08/12 12:32:21	CICSAR10	1	0	0	0	0		334.42	0.00	334.42	0	0	0
	03/08/12 12:32:21	CICSAR11	2	0	0	0	0		456.95	0.00	456.95	0	0	0
	03/08/12 12:32:21	CICSBPM1	3	0	0	0	2	02/22/12 20:04:55	311.78	0.00	456.94	0	0	0
	03/08/12 12:32:21	CICSBPM2	3	0	0	0	0		456.94	0.00	456.94	0	0	0
	03/08/12 12:32:21	CICSCM	5	0	0	0	2	02/28/12 14:27:56	19.18	0.00	456.95	0	0	0
	03/08/12 12:32:21	CICSILOG	2	0	0	0	0		404.84	0.00	404.84	0	0	0
	03/08/12 12:32:21	CICSPA01	5	2	0	0	2	03/06/12 00:07:21	60.41	5,876.35	60.41	0	0	0
	03/08/12 12:32:21	CICSPA02	5	2	0	0	2	03/06/12 00:13:21	60.32	5,476.38	60.32	0	0	0
	03/08/12 12:32:21	CICSPT01	9	4	0	0	4	03/06/12 00:13:21	60.32	5,476.38	60.41	0	0	0

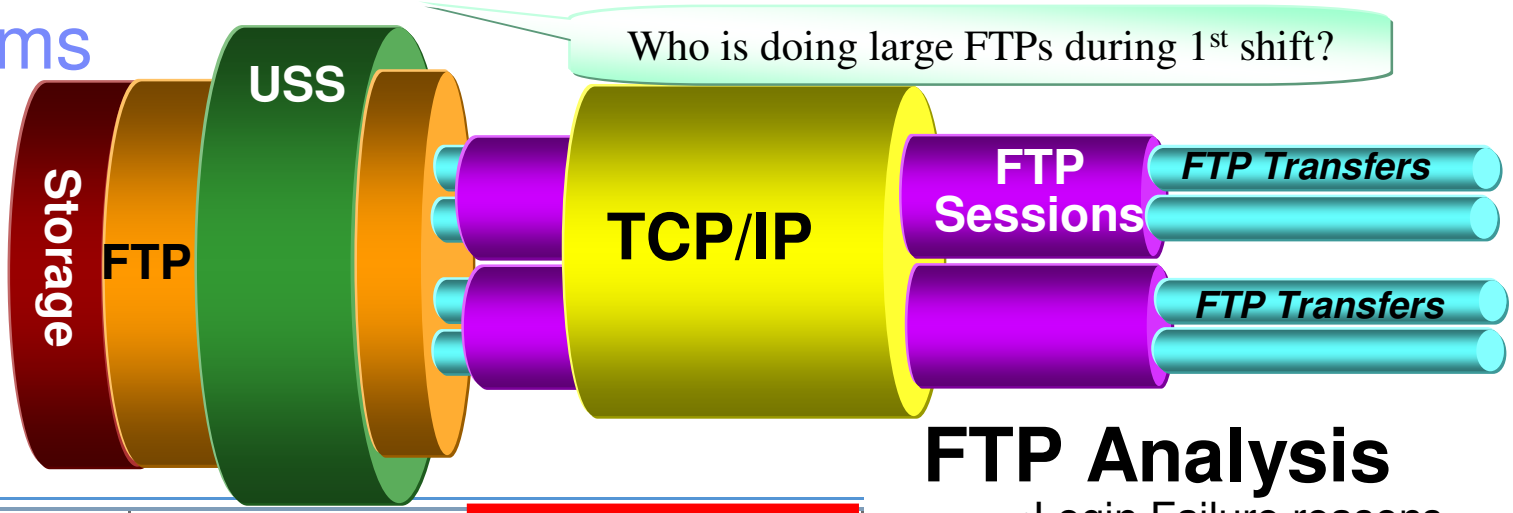
- Connection activity, connection counts, connection backlogs
  - Look for applications with connection failures and backlogs

Monitor At The Interface Level

	Interface Name	Interface Type	Current State	Transmit Packet Rate	Receive Packet Rate	Transmit Bandwidth Utilization	Receive Bandwidth Utilization	Bandwidth Utilization	Inbound Packets Discarded	Inbound Packet Discard Rate	Outbound Packets Discarded	Outbound Packet Discard Rate	Percent Packets Discarded	Outbound Packets in Error	Transmit Error Rate	Ou
	LOOPBACK	Loopback	Up	76779	76779	0	0	0	0	0	0	0	0	0	0	
	LOOPBACK6	Loopback	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	EZ6OSM01	OSA_QDIO_ethernet_OSM	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	EZ6OSM02	OSA_QDIO_ethernet_OSM	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	EELINK1	Static_virtual	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	OSAFBC0L	OSA_QDIO_ethernet_OSD	Up	611	524	0	0	0	0	0	0	0	0	0	0	
	OSX3200P	OSA_QDIO_ethernet_OSX	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	OSX3400P	OSA_QDIO_ethernet_OSX	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	HIPERLF5	Hipersocket	Down	0	0	0	0	0	0	0	0	0	0	0	0	
	EZASAMEMVS	MPC_ptp_samehost	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	IQDIOLNKC0A80193	Hipersocket	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	EZAXCFS2	MPC_ptp_xcf	Up	0	0	0	0	0	0	0	0	0	0	0	0	
	EZAXCFS3	MPC_ptp_xcf	Up	0	0	0	0	0	0	0	0	0	0	0	0	

- Monitor for interface status, bandwidth utilization, and errors
- Look for potential problems at the interface level

FTP Problems



FTP Analysis

- Login Failure reasons
- Hung
- Too Large
- Failures codes
- Last command
- Datasets names

User ID on Server	Session Start	Session End	Login Failure Reason Description
MS519	02/17/08 09:07:03	02/17/08 09:07:03	Password_not_valid
MS519	02/17/08 09:07:52		

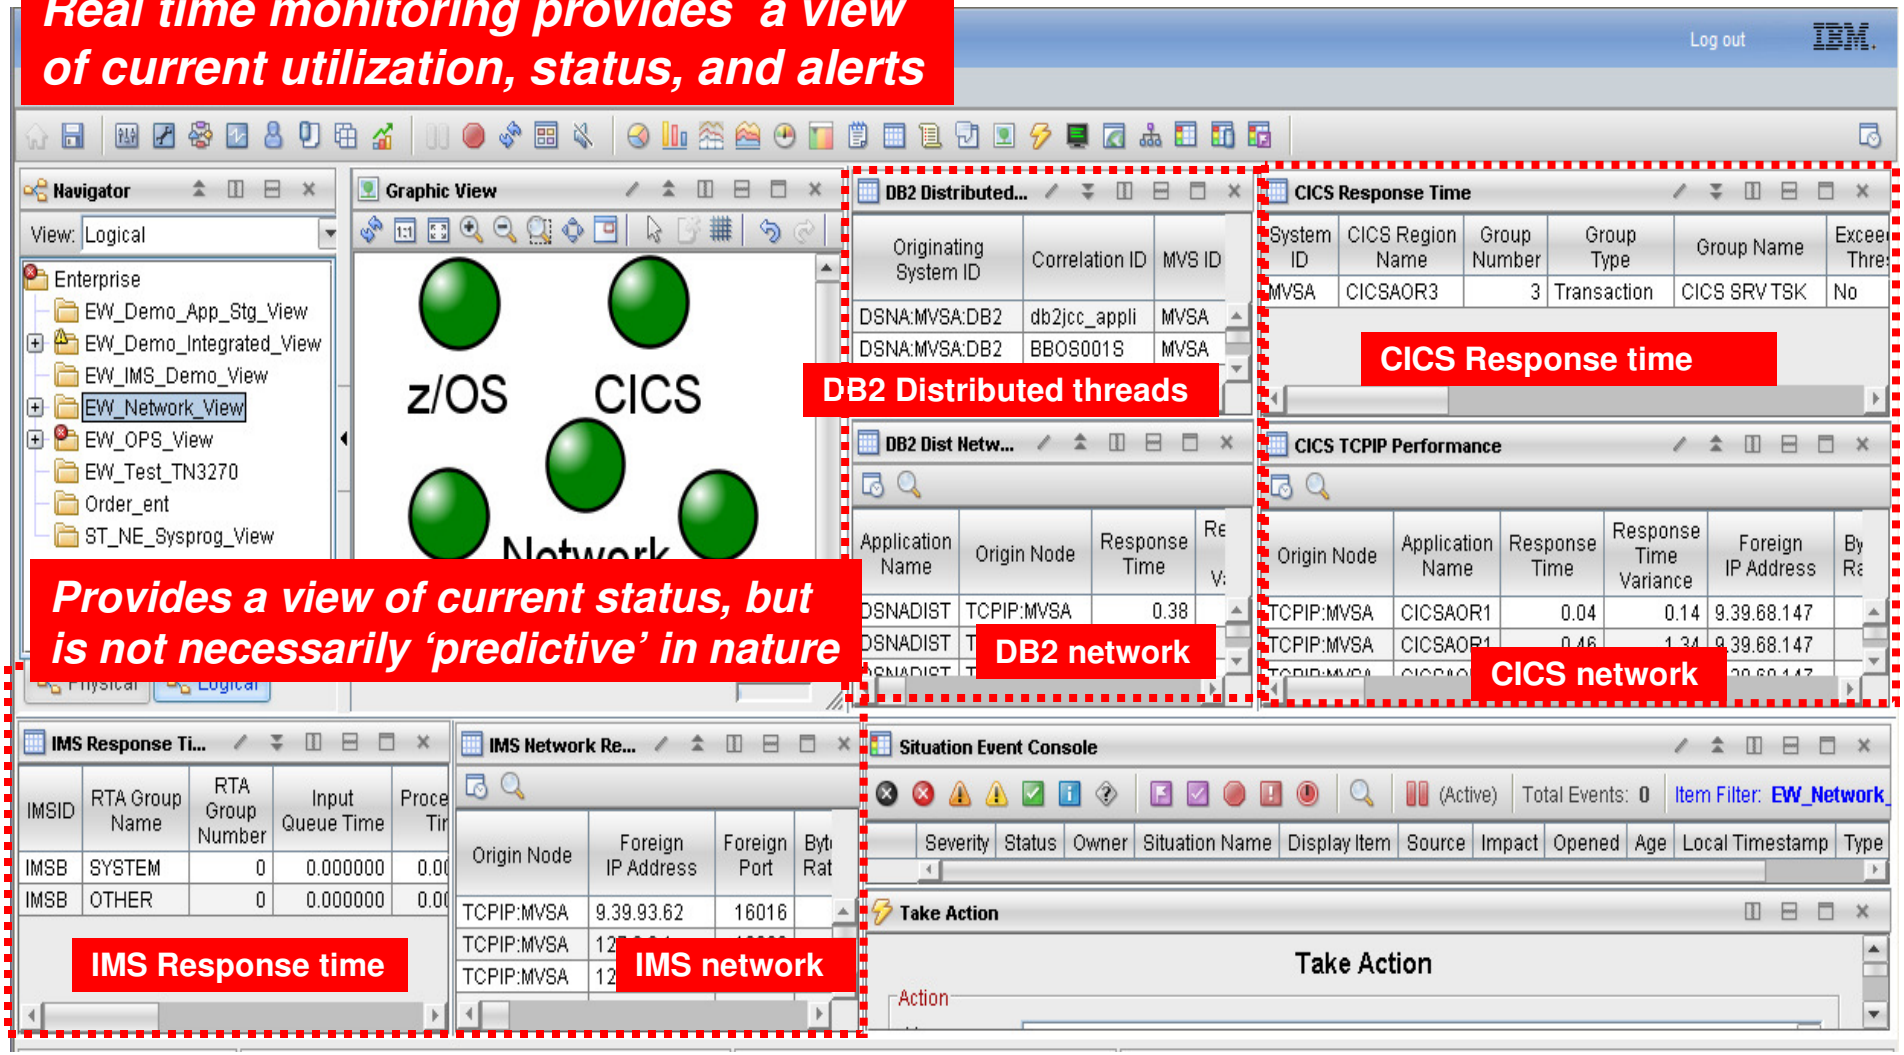
User ID on Server	Last Reply to Client	Transmission Duration	Bytes Transmitted	Command	Last Reply to Client Description	Dataset Name
MS519	250	1140	1965120	RETRIEVE	Requested_file...	MS519.ELVIS...
MS519	250	490	429056	RETRIEVE	Requested_file...	MS519.ELVIS...
MS519	250	1140	1965120	RETRIEVE	Requested_file...	MS519.ELVIS...
MS519	250	500	429056	RETRIEVE	Requested_file...	MS519.ELVIS...
MS519	250	1160	1965120	RETRIEVE	Requested_file...	MS519.ELVIS...

Dashboard Level Monitoring
Creating An Integrated Performance Interface

- Creating an integrated performance management display allows for the easy inclusion of network detail into various mainframe monitoring displays
- Integrated monitoring takes several forms
  - Integrated displays pulling together performance detail from multiple sources (host and network monitoring)
  - Integrated cross monitoring tool navigation
  - History integrated with real time performance information
  - Integrated alerts, alert correlation, and corrective actions

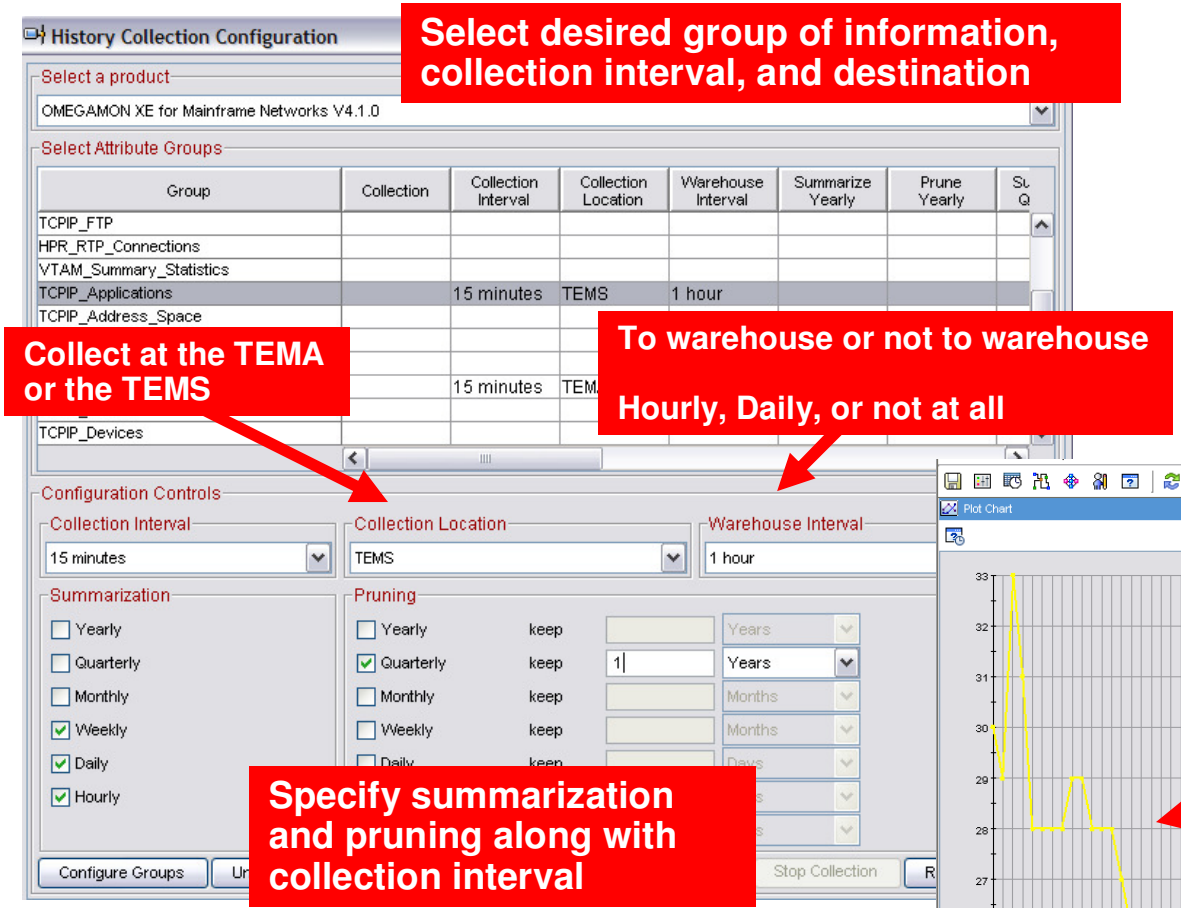
Dashboard Level Monitoring
Integrate Host And Network Monitoring

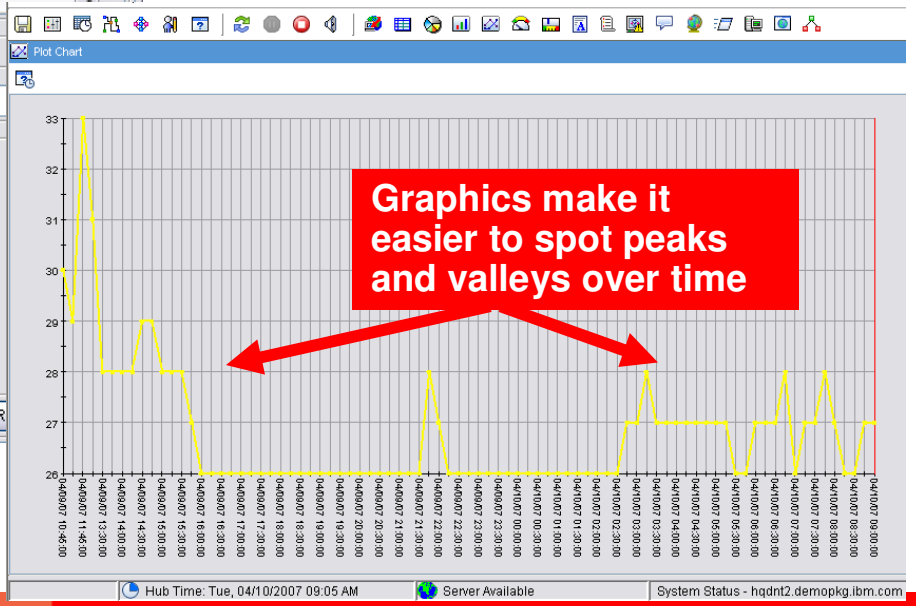
Real time monitoring provides a view of current utilization, status, and alerts



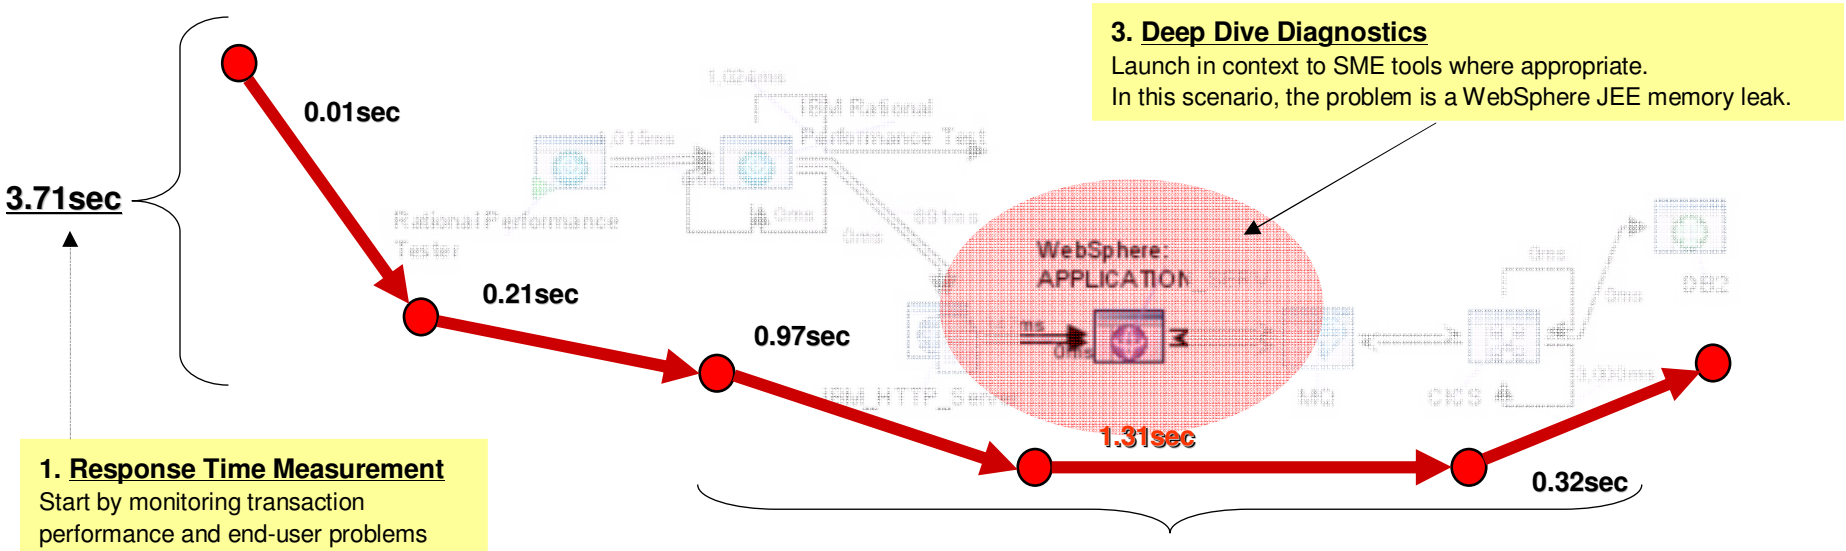
Collect History For Trending And Analysis

- Collect history data at multiple levels
  - System/LPAR level
  - Application level
  - Interface/adapter level
  - Connection level
- Frequency and retention will vary by type
- Useful for trending and alert threshold analysis





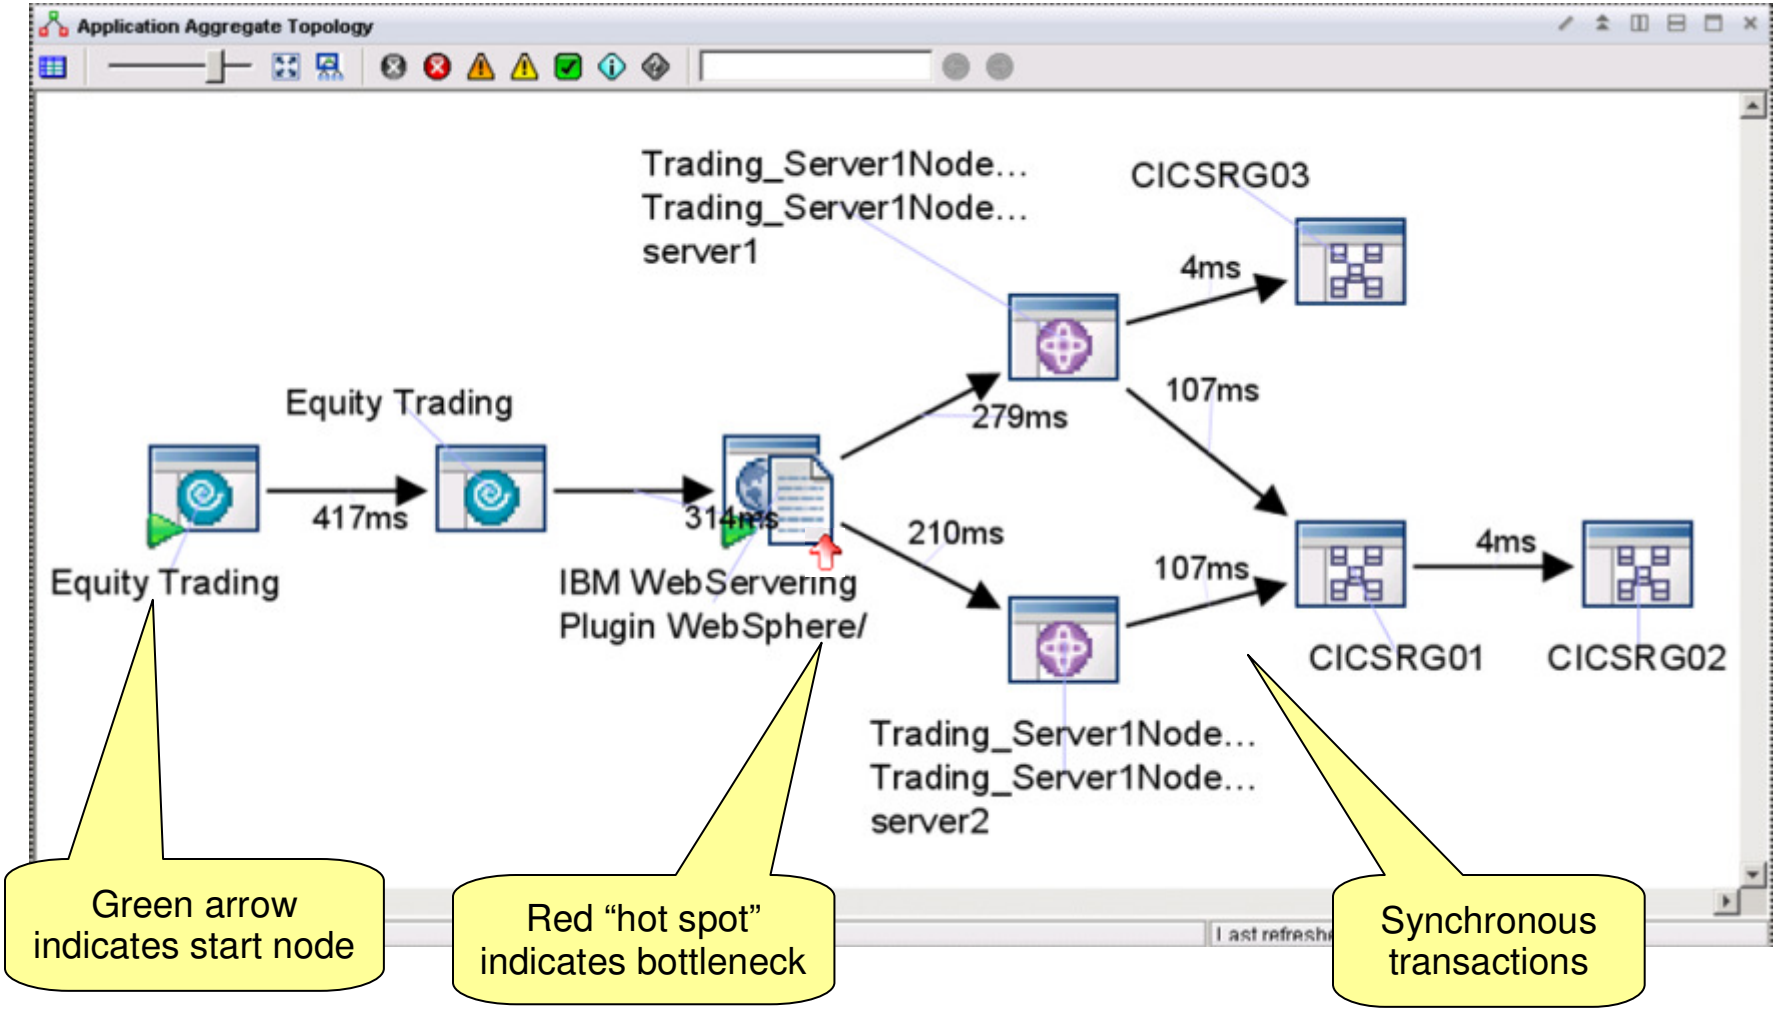
End-to-End Monitoring, Tracking and Diagnosis



Transaction Root Cause Analysis

1. **Sense** End User Experience and alert on threshold violation	2. **Isolate** by measuring performance data against baseline through entire infrastructure	3. **Diagnose and repair** through launch-in-context into deep-dive diagnostics

End To End Monitoring Enables The Isolation of "Hot Spots"



Summary

- The network is an essential part of the overall mainframe application time line
  - Each network application/subsystem has interactions with the network
- It's important to understand how the mainframe interacts with the network
  - Application/subsystem configuration and options
- It is useful to have an integrated monitoring strategy that pulls together core mainframe and network monitoring information
  - Integrated dashboard views, integrated analysis, integrated alerts and automated corrections
  - Defining an end to end analysis strategy

Thank You!
