Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

System Trace OA37996

- z/OS 1.11 and up
- **Problem:** high CPU or storage usage by the TRACE address space, due to repeated SNAPTRC or COPYTRC requests, resulting in slow system performance. These requests are generally due to repetitive errors in the system causing heavy RTM or dumping activity.
- **PTFs:** UA64891 to UA64893 (RSU1205)

RSM OA38243

- z/OS 1.11 and up
- Problem: hang in RSM GETSTOR processing for large pages.
- Note: see DOC APAR OA34024 for information on exploitation of large pages.
- PTFs: UA65482 to UA65484 (tentatively RSU1207)

WLM OA38755

- **z/OS 1.13**
- **Problem: ABEND878 in WLM due to orphaned storage in SP252. This can also lead to a WAIT08C.**
- **PTF: UA64377 (RSU 1206)**

OMVS OA38842

- **z/OS 1.13**
- **Problem: CICS socket activity hang due to ASYNC I/O completion exit not driven.**
- **PTF: UA64875 (RSU1205)**

LOGGER OA39822

- z/OS 1.12 and up
- **Problem: CICS regions cannot be started after moving CICS log streams datasets with DFSMSDSS. Problem is introduced by PEs from OA37972.**
- **PTFs: UA65918 to UA65919 (tentatively RSU1208)**

Allocation OA39831 SMF OA39735

- z/OS 1.11 and up
- OA39831: ABEND0C4 in Allocation when there are more than 32K of TCTIOT entries, resulting in DB2 outages.
- OA39735: spin loops after an ABEND in SMF. One possibility of such an ABEND is due to OA39831.
- PTFs:
 - OA39831: UA65996 to UA65998 (tentatively RSU1208)
 - OA39735: APAR closed 08/02/12
