Abstract

Do you have a hard time configuring ISPF? Do you want to create the same ISPF look and feel for your users? Would you like to set up ISPF for better performance? If you answered 'YES' to any of these questions, this session is for you! Come to this session to learn how to configure ISPF for lean and mean operation. Teach ISPF to dance to your tune, for a change! In this session, the speaker will also include an online demonstration and a real-time ISPF configuration session.

Agenda

- ISPF Configuration History
- ISRCONFG - The “Old” Way
- ISPCCONF Dialog Setup
- ISPCCONF - The “New” Way
- Create and Compile the Keyword File
- Convert ISRCONFG to ISPCCONF
- Miscellaneous Topics
- The WAC ISPF Configuration
- Summary
- Finally...

ISPF Configuration History

- In the past, ISPF Configuration was difficult because configuration data was stored in many places and code referencing it was inconsistent
- ISRCONFG load module
- ISPSPROF system default table
- ISREDIT edit profile table ZDEFAULT profile
- Hard-coded defaults in various ISPF load modules

ISPF Configuration History

- Unfortunately, ISRCONFIG, ISPSPROF, and ISREDIT didn't control all ISPF config items
- Problems were difficult to diagnose because you never knew where ISPF would get the information; sometimes a hard-coded default would override your explicit specification
- Configuring ISPF began with creating an SMP/E usermod installing the ISRCONFIG load module, but there were problems with this method

ISRCONFIG - The “Old” Way

- ISRCONFIG was placed in target ISP.SISPLPA by default, so without further SMP/E customization, ISPF defaults only took effect after an IPL with CLPA
- ISRCONFIG did not create defaults for all ISPF settings, so ISPF configuration tables ISP.SISPTENU(ISPSPROF) and ISP.SISPTENU(ISREDIT) had to be customized

ISRCONFIG - The “Old” Way

- To customize these tables, the ISPF administrator would go through each ISPF panel to change ISPSPROF settings (e.g. scroll values, etc.), and ran an edit session using profile ZDEFAULT to change ISREDIT settings
- An SMP/E usermod was then created to add the updated ISPSPROF and ISREDIT to the system
- Unfortunately, some ISPF modules ignored ISRCONFIG, ISPSPROF, ZDEFAULT, etc., so they used their own hard-coded defaults

ISPCCONF - The “New” Way

- Since ISPF configuration was too complex and error prone, the ISPF Configuration Dialog, ISPCCONF, was introduced with OS/390 V2R8
- ISPCCONF was designed to combine ISRCONFG, ISPSPROF, and ISREDIT ZDEFAULT settings into a single load module ISPCFIGU (VSAM configuration load module ISPCFIGV also created if VSAM keywords are specified in ISPCCONF by the ISPF administrator)

ISPCCONF - The “New” Way

- ISPCCONF is half of the solution, the other half is the ISPF code modified to honor ISPCCONF
- While ISPSPROF and ISREDIT are still distributed in ISP.SISPTENU, they are empty members only used as placeholders
- If you still want to use ISPSPROF and ISREDIT, they will override ISPCFIGU module, but not recommended
- Field-level help is available so you can make the correct configuration decision

ISPCCONF Dialog Setup

- To setup the ISPCCONF dialog, allocate a keyword file, a text file of options that will be used to generate load modules ISPCFIGU and ISPCFIGV containing ISPF defaults
- The keyword file must be a PDS, and have a minimum record length of 255 for variable format records, and 251 for fixed format records
- For space, CYL,(1,1,45) should allow enough room and directory space to store multiple members for testing and backup purposes

ISPCCONF Dialog Setup

- Since ISPCCONF is a default part of ISPF and can be executed by any user, be sure to secure LINKLIST, LPA, or any other candidate loadlib datasets to prevent an unauthorized user from either accidentally or deliberately changing ISPF defaults

Create and Compile Keyword File

- After setting up ISPCCONF, you can proceed to creating and compiling the keyword file
- Enter “TSO ISPCCONF” on command line or “ISPCCONF” from ISPF option 6
- The ISPF Configuration Utility menu is displayed, showing the last keyword file you worked with
- NOTE: The following screen shots were taken from a z/OS V1R13 system. Some of the fields shown may not be applicable to lower levels of ISPF.

Create and Compile Keyword File

Ma a 2,14
```

Create and Compile Keyword File

- This menu also displays current ISPF configuration table, keyword file that generated it, and date and time it was compiled
- Enter dataset name and member name of keyword file
- Enter option 1, Create/Modify Settings and Regenerate Keyword File
- Recommend default for Output File Content for Keyword File, option 2, so that all ISPF configuration options are displayed in keyword file, with defaults commented out
- This will clearly show customized configuration items
- Hit enter to display Create/Modify ISPF Configuration

Create and Compile Keyword File

Modify ISPF Sitewide Defaults

Command ==> _____ More: +

If you select any RESET fields in the sections: ISPF Site-wide Defaults, CUA
Color Settings, Log and List Defaults, Terminal and User Defaults, Workstation
Defaults, or Workstation Download Defaults you must increment the Sitewide
Defaults Version Level field to enable the RESET fields you have selected.
Increment only the last 3 digits of the Sitewide Defaults Version Level. ISPF
is always shipped with the Sitewide Defaults Version Level field set to 43000.
This value does not change with new versions or releases of ISPF.

Sitewide Defaults Version Level . . . 43000

General settings
Enter "/" to select option
[ ] Tab to Point and Shoot
[/] Tab to Action Bars
[ ] Use Session Manager
[/] Jump From Leader Dots
[/] Always Show Split Line
[/] Long Messages in Pop-ups
[ ] Edit PRINTDS Command
[/] Restore Test/Trace Options
[/] Display Panels in CUA Mode
[/] Use Keylists
[/] Show Pfkeys

Select Option 7.1 Dialog Test Panel
1 1. ISPYFP
   2. ISPYFPA
   3. ISPYFPB

Reset flags
Enter "/" to select option
[ ] Reset Tab to Point and Shoot
[ ] Reset Tab to Action Bars
[ ] Reset Use Session Manager
[ ] Reset Jump From Leader Dots
[ ] Reset Show Split Line
[ ] Reset Long Messages in Pop-ups
[ ] Reset Edit PRINTDS Command
[ ] Reset Restore Test/Trace Options
[ ] Reset Display Panels in CUA Mode
[ ] Reset Use Keylists
[ ] Reset Show Pfkeys
[ ] Reset LOG Data Set Process Option
[ ] Reset LIST Data Set Process Option
[ ] Reset Command Line Placement

Ma 16,4
```

Create and Compile Keyword File

- After going through all ISPF options, hit PF3 (END) to save keyword file
- A View screen is then displayed showing the keyword file and all customized options
- Hit PF3 (END) to leave keyword file display
- Message "Keyword file saved" is displayed on ISPF Configuration Utility menu

Create and Compile Keyword File

Ma a 2,14
```

Convert ISRCONFIG to ISPCCONF

- Option “5” on ISPCCONF menu converts ISRCONFIG to a keyword table
- The assembler source **MUST** be assembler source; if you try to use a usermod with JCL and SMP/E wrapped around it, ISPCCONF will not recognize the source
- Not really relevant today, but if you have ISRCONFIG source laying around and you’ve never run ISPCCONF....

Miscellaneous Topics

- Unfortunately, option “6”, the “Build SMP/E USERMOD” option, is not suitable for use
- The FMID, target, and DLIB datasets must be specified manually, and are not checked for accuracy
- While a syntactically correct USERMOD is built, the ++DATA and ++PROGRAM elements ISPCFIGx are not shipped by ISPF, so the USERMOD will not notify you of a regression when ISPCCONF maintenance is applied

Miscellaneous Topics

- Dialog uses superseded USERMODs, but USERMODs are RESTOREd and re-APPLY'd, not superseded
- A PRE field should be supplied for the prerequisite ISPF maintenance, but you have to add that manually
- Do not use the USERMOD option; rely on ISPF service to issue HOLDDATA for PTFs requiring ISPCCONF to rebuild ISPCFIGx; open a PMR if they forget

The WAC ISPF Configuration

- Following is the WAC (World According to Conley) method for configuring ISPF, a set of recommendations for settings to improve ISPF performance and usability
- If these settings work for you and you agree with them, great; but if not, don't hesitate to do something else if it's appropriate for your installation (Your Mileage May Vary!)

The WAC ISPF Configuration

- Option 1, Editor Settings
 - Enter "/" for Enable Extended Statistics
 - Change edit recovery dataset blocksize to 32760 for better performance and space utilization
 - For edit options, enter "/" for STATS EXT to get extended statistics, RECOVERY ON (safety, recovery, investment protection), uncheck NUMBER ON and change NULLS to NULLS ON ALL (increase user productivity in EDIT)
 - Consider entering "/" to force RECOVERY ON setting (this is the only ISPF config parm that I recommend forcing or overriding)

The WAC ISPF Configuration

- Option 1, Editor Settings
 - In Edit Highlighting, enter "/" for HILITE ON, Highlight DO/END logic, Highlight IF logic, and Match parentheses (user productivity, but there is higher overhead; testing shows about an 8X increase in service units for HILITE, but to the naked eye there's no degradation)
 - Uncheck highlight FIND strings (personal preference, a lot of hits on one screen make data hard to read)

The WAC ISPF Configuration

- Option 3, PDF Exits and Other PDF Settings
 - Specify 0 (zero) for Outlist Utility Block Size to get SDB OUTLIST datasets
 - Specify "/" for Enable RM/Tape Commands, and specify appropriate RM/Tape Command and APPLID
 - If running a storage manager other than HSM, modify the Volume for Migrated Data Sets and Delete Command for Migrated Data Sets fields for correct values

The WAC ISPF Configuration

- Option 4, ISPF Sitewide Defaults
 - Uncheck Tab to Action Bars, uncheck Use Keylists, uncheck Show Pfkeys
 - Set Select Option 7.1 Dialog Test Panel to ISPYFPA, set Command Line Placement to Asis, set Scroll Default to CSR, set Status Area Default to Calendar
 - For Empty Member List support, check Allow Empty Member List and Allow Empty Member List (nomatch)

The WAC ISPF Configuration

- Option 4, ISPF Sitewide Defaults
 - Set List Data Set Records per Block to 231 for a 3390 (LRECL 121 * 231 = 27951, half-track for a 3390)
 - Specify 0 (zero) for all ISPF dataset blocksizes to get SDB
 - For LOG Data Set Process Option and LIST Data Set Process Option, specify "3" to Delete Without Printing (eliminates LOG/LIST prompt upon exiting ISPF)
 - Enter "/" for Use Additional Qualifier for PDF Output Data Sets

The WAC ISPF Configuration

- Option 4, ISPF Sitewide Defaults
 - For multisystem and multiple logon support, specify SYS&SYSNAME Additional Temporary Data Set Qualifier to create LPAR-unique temporary dataset names and eliminate need for ISPF exit 16
 - Specify "/" for Multi-logon Profile Sharing (required to support OSMF's multiple ISPF window facility)
 - If enabling multiple logon support, create shared ISPF profile dataset and modify logon exec, etc., to allocate
 - For more information regarding multiple logon, refer to http://home.roadrunner.com/~pinnccons/TSO_LOGON_with_the_Same_Userid_on_Multiple_LPARs_in_a_Sysplex.pdf

The WAC ISPF Configuration

- Option 5, ISPDFLTS, CUA Colors, and Other DM Settings
 - Set SITE for Site Command Table 1
 - Set USER for User Command Table 1
 - Set Retrieve Command Stack Size to 4096
 - Set the Default Primary Panel to ISR@PRIM
 - Set the Default LIBDEF Processing Option to STACK
 - Change Action Bar Separator Line to color to Yellow

The WAC ISPF Configuration

- Option 6, Log and List Defaults
 - Create valid Log/List job cards
 - Set the Log Primary and Secondary Quantity to 0
 - Enter "/" for Message ID
 - Set the List Primary and Secondary Quantity to 1
- Option 7, Terminal and User Defaults
 - Set Screen Format to MAX (take advantage of larger screen sizes), set Terminal Type to "6" for 3278T (better character set for square brackets, etc.
 - Set Number of Keys to "2" for 24
 - Enter "/" for Message Identifier field to assist debugging

The WAC ISPF Configuration

- Option 8 Workstation Defaults can remain unchanged
- Option 9 Workstation Download Defaults can remain unchanged
- That's the WAC ISPF Configuration!

DEMO TIME!

- This demo will create an ISPCFIGU module in a private user loadlib
- TSOLIB will be used to activate the private user loadlib and enable the new ISPF configuration
- Existing profile dataset will be renamed (assumes that LOGON exec or exec invoking ISPF will allocate a new profile so that ISPCFIGU will populate new defaults)
- Synchronize your watches
- Time me
- GO!

Summary

- Discussed ISPF Configuration History
- Reviewed ISRCONFIG methods for customizing ISPF
- Introduced ISPCCONF dialog for customizing ISPF
- Demonstrated how to Create and Compile keyword file
- Showed how to convert from ISRCONFIG to ISPCCONF
- Discussed Miscellaneous Topics such as SMP/E usermod
- Discussed WAC (World According to Conley) method for configuring ISPF

Finally...

- Please fill out an evaluation, your comments help me to deliver a better presentation
- <https://share.confex.com/share/120/sessionevaluation.cgi>
- I'm interested in hearing about your ISPCCONF experiences, positive or negative; if you encounter any unique situations or problems using ISPCCONF to configure ISPF, please let me know about them by sending an Email to pinncons@rochester.rr.com
