Our Purpose

The MVS Core Technologies Project is concerned with a broad spectrum of mainframe-related topics that provide in-depth exploration of IBM's flagship platform in both the hardware and software realms. Hardware areas of interest include System z processor, zBX/blades, HMC/zManager, coupling facilities, time services, and I/O connectivity. Software areas of interest include z/OS operating system components, subsystems and applications such as RSM, VSM, IOS, Parallel Sysplex, JES2, JES3, TSO/E, ISPF, z/OS UNIX, zFS, Ported Tools, z/OSMF, and enterprise presentation solutions such as Infoprint. Advanced sessions will discuss architecture, installation, configuration, migration, service, problem determination, and exploitation of the latest System z and z/OS capabilities. Tools such as ServerPac, HCD/HCM, SMP/E, IPCS, and others are regularly discussed. The Project also offers sessions for those who are new to the platform, intended to help them quickly integrate into their environment and acquire mainframe skills and understanding of the platform, especially in z/OS.
