

SDSF Beyond the Basics

Bruce Koss
Wells Fargo

February 4, 2013
13031

Objective

- Introduction on how to configure and personalize the screens, execute SDSF in batch jobs and code SDSF REXX programs
- Links are provided to SHARE presentations and IBM manuals to assist in learning SDSF
- May need to adjust Adobe Reader zoom value to view text
- Disclaimer
 - Security may prevent access to panels or executing commands
 - Does not contain information on SDSF Action Bar
 - Does not cover all SDSF and SDSF REXX commands
 - Limited information on JES3, mostly JES2

Agenda

Subject	Topics
Overview	ISPF vs. TSO , Panels
NP Commands	NP Column , NP Commands , NP Example
Primary Commands	? , KEYS , SET ACTION , SET DISPLAY , PREFIX , OWNER , SYSNAME , ARRANGE , FILTER , SORT , SEARCH , WHO
LOG	OPERLOG vs. SYSLOG , LOG OPERLOG , LOG SYSLOG , ACTION , SYSID , FINDLIM , LOCATE , FILTER , PRINT , / , SET CONSOLE
Batch	Status of Jobs , LOG , ULOG
REXX	REXXHELP , COLSHELP , ULOG , DA ALL
Links	SHARE , IBM

Overview

ISPF vs. TSO

- Two ways to invoke SDSF
 - ISPF
 - From ISPF primary menu type in **SD**
 - Or from any primary command line type in **SDSF** or **ZSD**
 - Menu bar displayed at top of screen
 - Can save customization of environment
 - TSO
 - From **TSO READY** screen type in **SDSF**
 - Or from within ISPF type in **TSO SDSF**
 - No menu bar at top of screen
 - Can NOT save customization of environment

Panels

Panel	Means	Description
CK	Health Check	Shows information from IBM Health Checker for z/OS about the active checks
CKH	Health Check History	Shows instances of a check when the “L” command is typed next to a specific health check from the CK panel
DA	Display Active	Shows information about MVS address spaces (jobs, started tasks, and TSO users) that are running
ENC	Enclaves	Shows enclaves
H	Held Output	Shows user information about SYSOUT data sets for jobs, started tasks, and TSO users on any held JES output queue
I	Input Queue	Display information about jobs, started tasks, and TSO users on the JES input queue or executing
INIT	Initiators	Display information about JES initiators defined in the active JES on their CPUs
JC	Job Class	Display information about job classes
JDS	Job Data Set	Display information about SYSOUT data sets for a selected job, started task, and TSO user. When the JDS panel is accessed from the DA, I, or ST panel, the values for all the columns are obtained from the spool data set. When the JDS panel is accessed from the H or O panel, the values for some columns are obtained from in-storage control blocks
JP		Display and control of members in a JES3 JESPLEX. Will display the MAS panel when executed on a JES2 environment
LI	Lines	Display information about JES lines and their associated transmitters and receivers
MAS (JP)	Multi Access Spool	Display and control of members in a JES2 MAS

Panels

Panel	Means	Description
NC	Network Connections	Display information about JES networking connections to an adjacent node
NO	Nodes	Display information about JES nodes
NS	Network Servers	Display information about JES server-type networking devices on the node
O	Output	Display information about SYSOUT data sets for jobs, started tasks, and TSO users on any nonheld JES output queue
OD	Output Descriptor	Display JES output descriptors. In a JES2 environment, columns can be overtyped only if you accessed the OD panel from the O or H panel, or from a JDS panel that was accessed from the O or H panel. When you overtype a column on the OD panel, the change applies to all data sets for that group
PR	Printers	Display information about JES printers printing job, started task, and TSO user output
PS	Processes	Displays information about z/OS UNIX System Services processes
PUN	Punches	Display information about punches
RDR	Readers	Display information about readers
RES	Resources	Display information about WLM resources in a scheduling environment, or in the sysplex
RM	Resource Monitor	Shows information about JES2 resources
SE	Scheduling Environment	Display information about scheduling environments
SO	Spool Offload	Display information about JES2 spool offloaders
SP	Spool	Display and control JES2 spool volumes

Panels

Panel	Means	Description
SR	System Requests	Display outstanding system requests
ST	Status	Display information about jobs, started tasks, and TSO users on the JES queues

NP Commands

NP Column

- What does the “NP” column stand for/mean?
 - Possibly “Non-Protected” or “iNPut” field
 - This is not documented anywhere in the SDSF manual
 - Manual refers to NP commands as Action characters

```

NP Commands

- Next few slides list all NP commands in alphabetical order with
 - SDSF action or MVS/JES2 commands being issued
 - Valid panels
 - Command level
- Command Level
 - Distinguishes the security access required when using ISFPARMS
 - Wells Fargo and other companies no longer use ISFPARMS
 - Instead ACF2, RACF, TSS or a SAF-compliant External Security Manager (ESM) is used to control access to SDSF commands
 - Each command level is inclusive of all those with a lower number
 - For example, a user with a command level of 3 can perform the functions requiring a command level of 3, 2, 1, and 0
- Highlighted in yellow are probably the most used NP commands

NP Commands

NP Command	SDSF Action or MVS/JES2 Commands Issued	Valid Panels	Command Level
+	Expand NP column width	All tabular panels except OD	0
//	Block command	All tabular panels except OD	0
=	Repeat command	All tabular panels except OD	0
?	List job data sets	DA, H, I, O, OD, ST	0
A	\$TO (Set output)	H, O	2
A	F (Modify activate)	CK	3
A	\$A (Release)	DA, I, ST	3
AI	SETAUTOR	SR	3
Bx	\$B (Back space)	PR, PUN	3
C	\$C (Cancel)	DA, H, I, JDS, O, ST, LI, NO, PR, PUN, RDR, SO	2
C	\$CO (Cancel)	H, O	2
C	C	NC	3
C	C (Cancel)	PS	3
C	KC	SR	3
CA	\$C,ARMRESTART	DA, I, ST	2
CD	\$C (Cancel, dump)	DA, I, ST	2

NP Commands

NP Command	SDSF Action or MVS/JES2 Commands Issued	Valid Panels	Command Level
CDA	\$C,D,ARMRESTART	DA, I, ST	2
D	\$D (Display)	DA, I, ST, INIT, JC, LI, MAS, NC, NO, NS, PR, PUN, RDR, RM, SO, SP	1
D	D (Display)	PS, RES, SE, SR	1
D	F (Modify display)	CK	3
DA	\$D (Display)	NS	1
DC	\$D (Display)	NO	1
DL	\$D (Display)	DA, I, ST, INIT, NC, NS, PR, PUN, RDR, SP	1
DL	F (Modify display)	CK	3
DP	\$D (Display)	NO	1
DP	F (Modify display)	CK	3
DPO	F (Modify display)	CK	3
DS	\$D (Display)	NS	1
DS	F (Modify display)	CK	3
E	Erase output descriptors	OD	2
E	\$E (Restart)	DA, I, ST, LI, NO, PR, PUN, SO	2
E	F (Modify refresh)	CK	3

NP Commands

NP Command	SDSF Action or MVS/JES2 Commands Issued	Valid Panels	Command Level
E	\$E (Restart)	NC, NS	3
ES, ESH	\$E (Restart)	DA, I, ST	2
Fx	\$F (Forward space)	PR, PUN	3
H	\$H (Hold)	DA, I, ST	2
H	\$TO (Set output)	H, O	2
H	SSI	JDS	2
H	F (Modify deactivate)	CK	3
H	\$H (Hold)	JC	3
I	Display more information	ENC, I, ST	0
I	\$I (Interrupt)	PR, PUN	3
I	\$T (Set)	LI	3
J	\$J	MAS	1
J	\$D (Display)	SP	1
J	\$SJ (Start)	I, ST	3
JD	\$J	MAS	1
JH	\$J	MAS	1
JJ	\$J	MAS	1

NP Commands

NP Command	SDSF Action or MVS/JES2 Commands Issued	Valid Panels	Command Level
JS	\$J	MAS	1
K	C (Cancel)	DA	3
P	\$P (Stop)	NC, NS	3
PC	\$P (Stop)	SP	3
PF	F (Modify delete, force)	CK	3
PP	\$C (Purge protected)	DA, I, ST	2
Q	Display output descriptors	DA, H, I, JDS, O, ST	0
Q	\$T (Set)	LI	3
R	Display WLM resources	SE	0
R	F (Modify run)	CK	3
R	RESET (RMF)	DA	3
R		ENC	3
R	R (Reply)	SR	3
RQ	RESET (RMF)	DA	3
RQ		ENQ	3
S	Display check results or job data sets	CK, CKH, DA, H, I, JDS, O, OD, ST	0
S	\$S (Start)	INIT, LI, MAS, PR, PUN, RDR, SO, SP	3

NP Commands

NP Command	SDSF Action or MVS/JES2 Commands Issued	Valid Panels	Command Level
S	\$S (Start)	NC, NS	3
SB	Display check results or browse job data sets	CK, CKH, DA, H, I, JDS, O, OD, ST	0
SBI	Browse REXX input data set using ISPF browse	CK	0
SBO	Browse REXX output data set using ISPF browse	CK	0
SE	Display check results or edit job data sets	CK, CKH, DA, H, I, JDS, O, OD, ST	0
SEI	Edit REXX input data set using ISPF browse	CK	0
SEO	Edit REXX output data set using ISPF browse	CK	0
SJ	Display check results or job data sets	DA, H, I, JDS, O, OD, ST	0
SN	\$S (Start)	NC, NO	3
SR	\$S (Start)	SO	3
ST	Display associated jobs	JC, SE	0
ST	Display ST	JC	1
ST	\$S (Start)	SO	3
T	F (Modify)	PS	3
U	F (Modify update, repcat)	CK	3
V	View CSR_-mode data	JDS, OD	0
W	\$T (Set)	DA, I, JDS, ST	2

NP Commands

NP Command	SDSF Action or MVS/JES2 Commands Issued	Valid Panels	Command Level
X	Print data set	CK, CKH, DA ,H, I, JDS, O, OD, ST	0
XC	Print data set and close print file	CK, CKH, DA ,H, I, JDS, O, OD, ST	0
XD, XDC	Print data set using Open Print Data Set panel	CK, CKH, DA ,H, I, JDS, O, OD, ST	0
XF, XFC	Print data set using Open Print File panel	CK, CKH, DA ,H, I, JDS, O, OD, ST	0
XS, XSC	Print data set using Open Print panel for SYSOUT	CK, CKH, DA ,H, I, JDS, O, OD, ST	0
Y	P (Stop) (RMF)	DA	3
Y	STOP	NS	3
Z	\$Z (Halt)	INIT, PR, PUN, RDR, SP	3
Z	FORCE	DA	3
Z	FORCE	NS	3

NP Example

- Save four reports to a data set using the XD, X and XC commands

```

```

Primary Commands

Primary Commands

- Next few slides demonstrate how to customize the SDSF screens
- These commands can be executed from any panel or accessed from the action bar, located above the primary command line
- A question mark (?) can be passed as a parameter to display a pop-up panel on most commands
- After executing these commands, suggest terminating SDSF to ensure settings are saved

KEYS

- Validate PF5 is IFIND and PF12 is CRETRIEV
→ KEYS
- Results

```

LOG

OPERLOG vs. SYSLOG

- OPERLOG
 - Operations log (OPERLOG)
 - Is a merged, sysplex-wide system message log
 - It is provided by a log stream
 - Which is a collection of log data used by the MVS System Logger
- SYSLOG
 - Systems log (SYSLOG)
 - Contains a logical partition's (lpar) message log
 - It is a SYSOUT data set produced by job entry subsystem (JES2/3)
 - SYSOUT data sets are output spool data sets on direct access storage devices (DASD)
- SDSF LOG command
 - Used to display OPERLOG or a single-system's SYSLOG

LOG OPERLOG

- Display OPERLOG, this is the default
→ LOG

FILTER – Columns

Column	Description
<code>SYSNAME</code>	MVS system name
<code>DATE</code>	Date the message was logged, in character format. Enter the date as it is displayed
<code>TIME</code>	Time the message was logged, in character format. Enter the time as it is displayed
<code>DATETIME</code>	Date and time the message was logged, in date/time format. This column accepts the date format set with SET DATE. Use operators with > or <
<code>JOBNAME</code>	Originating job name
<code>JOBID</code>	Job ID
<code>CONSOLE</code>	Console name
<code>MSGID</code>	Message ID (first 8-character token of the message text)
<code>MSGTEXT</code>	Message text (includes message ID). Note that because this column includes the message ID, you may want to include a leading generic pattern matching character in your filter command, for example, <code>FIL MSGTEXT EQ *STARTED*</code>

PRINT to SYSOUT

- Print to SYSOUT messages from 01:00:00 to 02:00:00
 → PT S; PT 01:00:00 02:00:00; PT CLOSE
