Network Problem Diagnosis with Packet Traces

David J Cheng

Applied Expert Systems, Inc.

davec@aesclever.com

August 14, 2013, 11:00AM

Session 13256

SHARE in Boston

Agenda

- z/OS: Using CTRACE
  - Packet Trace
  - Data Trace
  - OSAENTA Trace
- Linux, Unix/AIX: tcpdump (Windows: windump)
- TCP/IP revisited
- Sample Cases
  - OSA - Excessive / Dropped packets, addressing errors
  - DNS, DHCP
  - FTP – Flow analysis, brute force attack
  - AT-TLS – Flow analysis

Using Traces

- Know your protocols - network stack & application flow
  - Check for “errors”
  - Mismatched capabilities
  - Lost packets (congestions?)
- Baseline – normal traffic flow
- Trace comparison
- Trace inventory with annotations
- Multiple trace points – multiple platforms
- Automate taking traces – one-click operation
- Scheduling traces

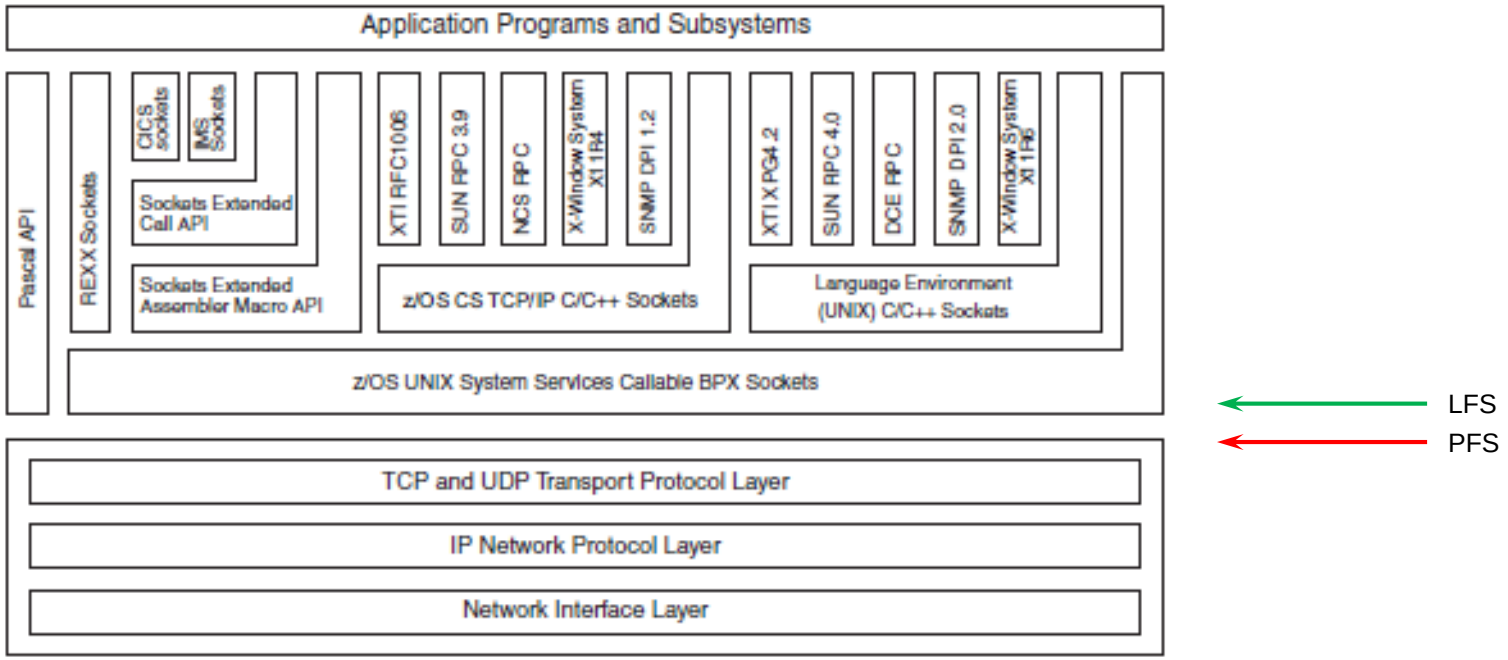
How to Take a Packet Trace?

z/OS CTRACE:

- SYSTCPDA
  - Packet Trace
    - *Scope: TCP/IP stack*
    - *Packets entering or leaving the TCP/IP stack*
  - Data Trace
    - *scope: TCP/IP stack*
    - *Socket data into and out of the Physical File System (PFS)*
    - *Application data (unencrypted)*

- SYSTCPOT
  - OSAENTA
    - *Scope: LPAR or CHPID*
    - *Frames entering or leaving an OSA adapter for a connected host*

TCP/IP Networking API Relationship*



** Comm Server IP Sockets API Guide & Ref*

z/OS CTRACE: SYSTCPDA – Packet Trace

- Set up an External Writer Proc

E.g., SYS1.PROCLIB(AESWRT):

```
//IEFPROC EXEC
  PGM=ITTTRCWR,REGION=0K,TIME=1440,DPRTY=15
//TRCOUT01 DD DISP=SHR,DSN=trace.dataset
```

- Set up tracing parameters

E.g., SYS1.PARMLIB(CTAESPRM):

```
TRACEOPTS ON WTR(AESWRT)
… other trace options …
```

z/OS CTRACE: SYSTCPDA – Packet Trace

- *To Start Tracing:*

```
TRACE CT,WTRSTART=AESWRT
V TCPIP,tcpip,PKT,CLEAR
V TCPIP,tcpip,PKT,LINKN=<link>,ON,FULL,PROT=TCP,IP=<ip addr>
TRACE CT,ON,COMP=SYSTCPDA,SUB=(TCPIP),PARM=CTAESPRM
```

- *To Stop Tracing:*

```
V TCPIP,tcpip,PKT,OFF
TRACE CT,OFF,COMP=SYSTCPDA,SUB=(TCPIP)
TRACE CT,WTRSTOP=AESWRT,FLUSH
```

- *To View Tracing Status:*

```
D TRACE,WTR=AESWRT
```

Verify that the external writer is active

```
D TCPIP,tcpip,NETSTAT,DE
```

Verify that **TrRecCnt** is non-zero and incrementing

z/OS CTRACE: SYSTCPDA Parameters

IPADDR:  *                  SUBNET: *
PORTNUM: *
```

z/OS CTRACE: SYSTCPOT – OSAENTA Trace

- OSA-Express Network Traffic Analyzer (OSAENTA)
  - Trace data is collected (by the device drivers of OSA) as frames enter or leave an OSA adapter for a connected host
  - The host can be an LPAR with **z/OS, z/VM** or **Linux**
  - ARP packets, MAC headers (w/VLAN tags)
  - The trace function is controlled by z/OS Communication Server, while the data is collected in the OSA at the network port

- Pre-Reqs:
  - Require the microcode for the OSA (2094DEVICE PSP and the 2096DEVICE PSP).
  - Update the OSA using the Hardware Management Console (HMC) to:

    Define more data devices to systems that will use the trace function.

    Set the security for the OSA:

    LOGICAL PARTITION - Only packets from the LPAR

    CHPID - All packets using this CHPID
  - Verify the TRLE definitions for the OSA that it has one DATAPATH address available for tracing. Note that **two** DATAPATH addresses are required – one for data transfers and the other for trace data.

TRLE Definition and D NET,TRL,TRLE=

       PORTNUM:  *
```

z/OS CTRACE: OSAENTA ABBREV Parm

- Specify FULL or ABBREV={length | 224 } for the amount of data to be traced.
- ABBREV allows a value up to 64K, why the maximum value is reset to 480?
- "An OSA might limit the amount of data that is actually traced."
  - To conserve the OSA trace buffer space
  - ABBREV value is rounded up to the next 32-byte multiple with a maximum of 480
- To circumvent this limitation, start Packet Trace at the same time.

Linux, Unix and AIX: tcpdump (Windows: windump)

- Requires root authority; use the “su” command first
- Output is formatted trace (default) or written to a pcap file
- tcpdump –w xyz.pcap
- tcpdump –v (sample output from SLES 11 on System z)

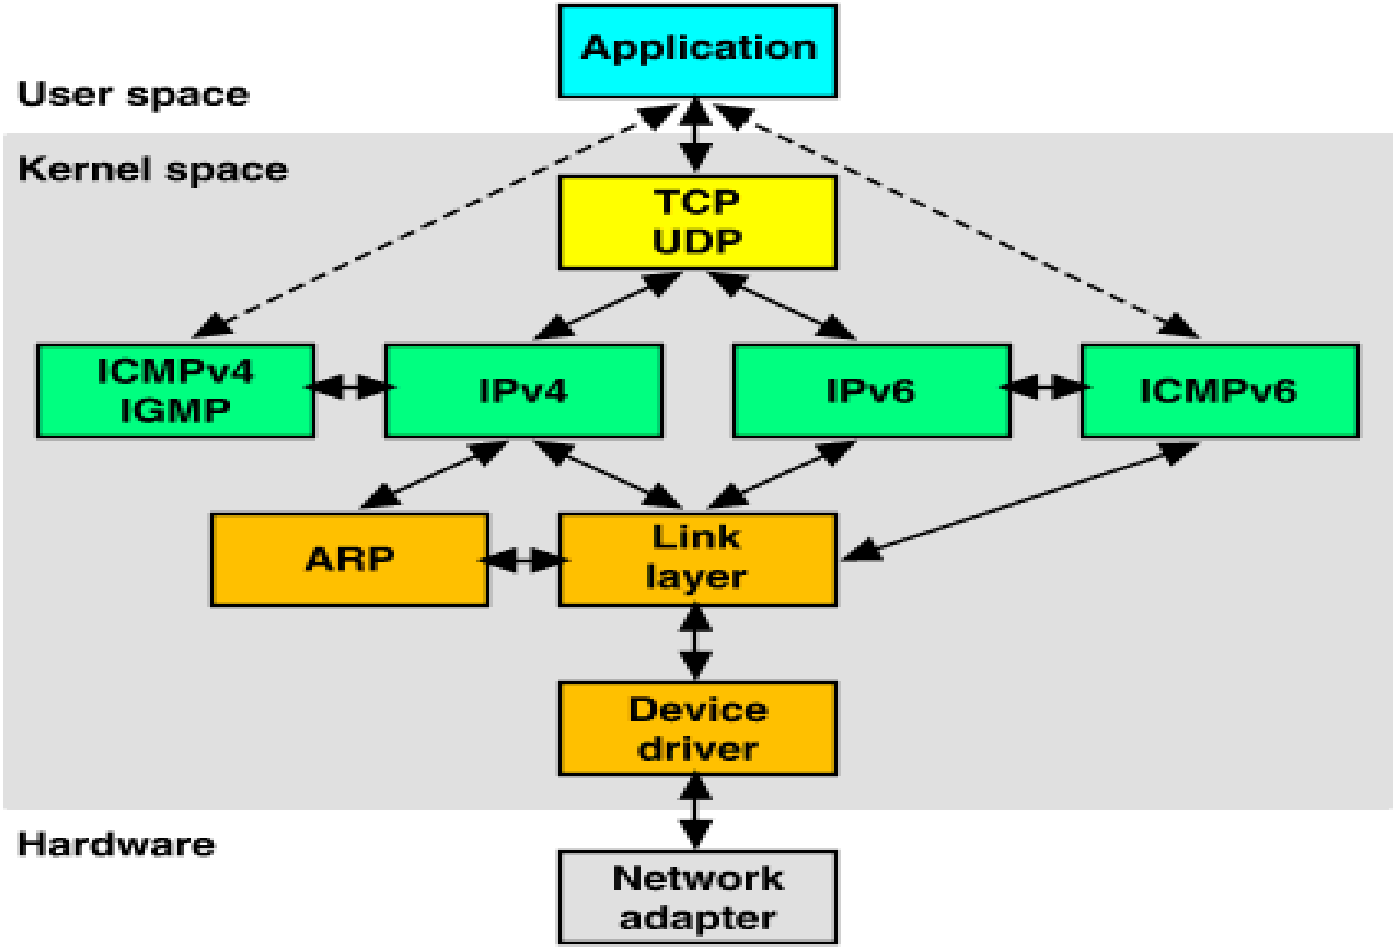
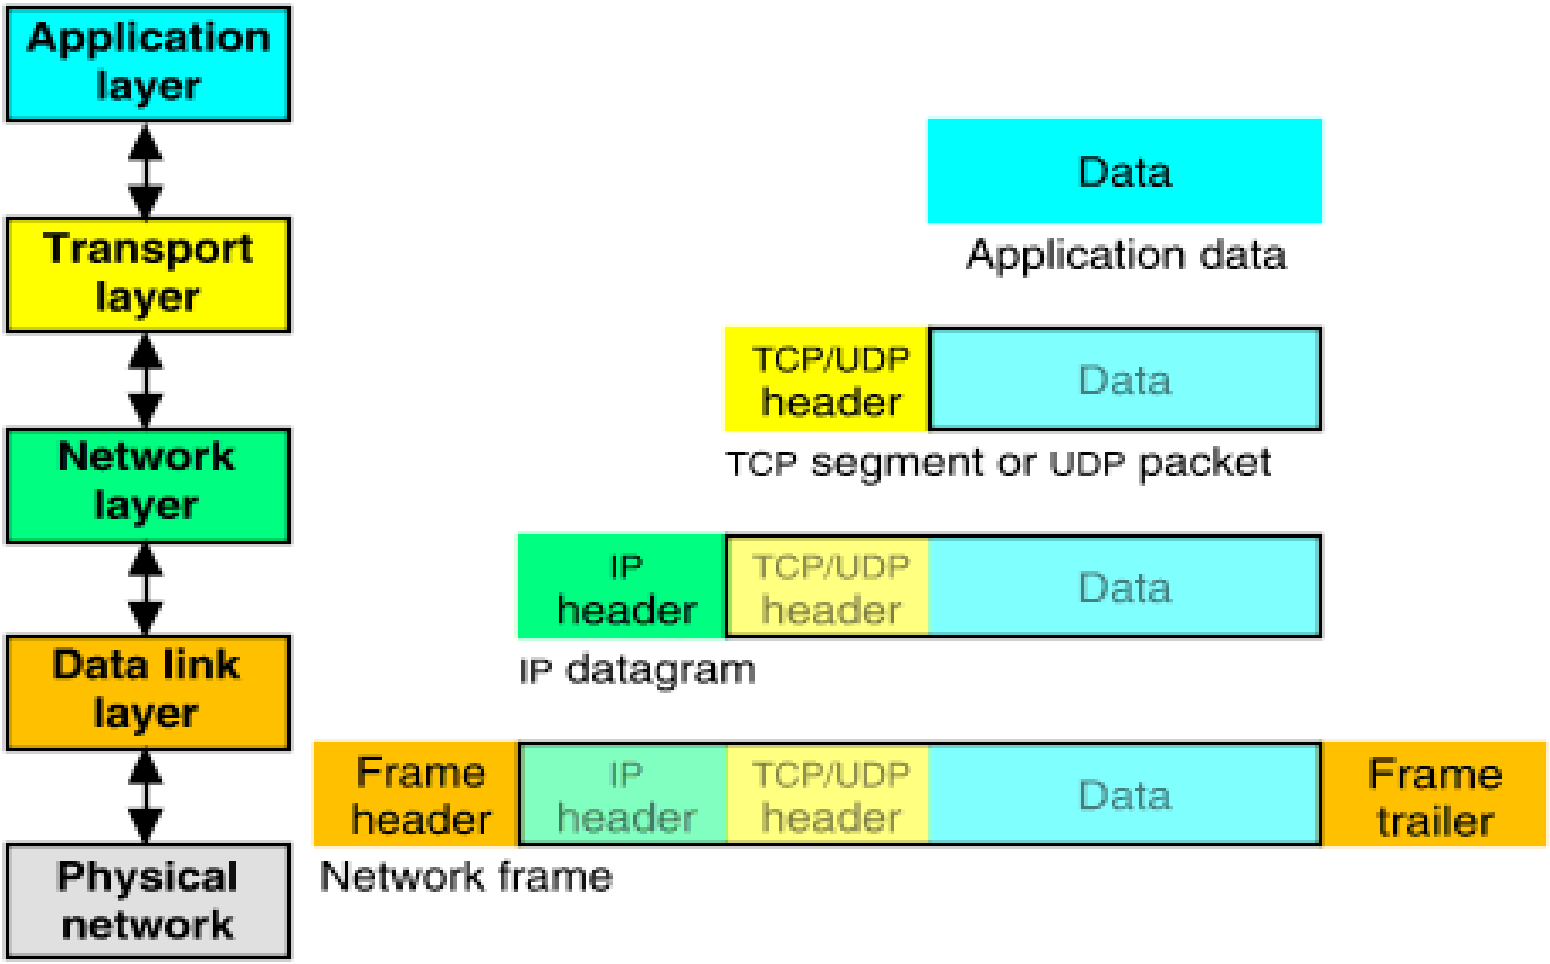
Networking Stack Support for TCP/IP



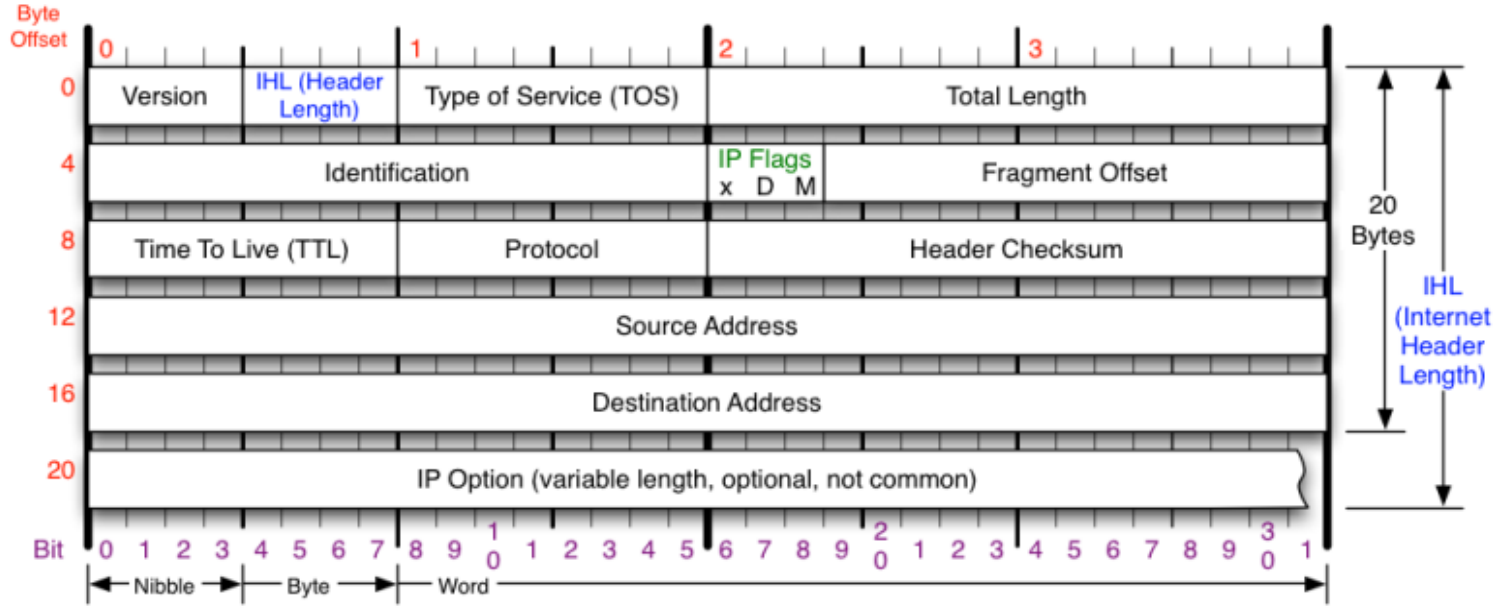
Source: http://uw713doc.sco.com/en/NET_tcpip/tcpN.tcpip_stack.html

Encapsulation of Application Data within a Network Stack



Source: http://uw713doc.sco.com/en/NET_tcpip/tcpN.tcpip_stack.html

IP Header



Version

Version of IP Protocol. 4 and 6 are valid. This diagram represents version 4 structure only.

Header Length

Number of 32-bit words in TCP header, minimum value of 5. Multiply by 4 to get byte count.

Protocol

IP Protocol ID. Including (but not limited to):

1 ICMP	17 UDP	57 SKIP
2 IGMP	47 GRE	88 EIGRP
6 TCP	50 ESP	89 OSPF
9 IGRP	51 AH	115 L2TP

Total Length

Total length of IP datagram, or IP fragment if fragmented. Measured in Bytes.

Fragment Offset

Fragment offset from start of IP datagram. Measured in 8 byte (2 words, 64 bits) increments. If IP datagram is fragmented, fragment size (Total Length) must be a multiple of 8 bytes.

Header Checksum

Checksum of entire IP header

IP Flags

x D M

x 0x80 reserved (evil bit)
D 0x40 Do Not Fragment
M 0x20 More Fragments follow

RFC 791

Please refer to RFC 791 for the complete Internet Protocol (IP) Specification.

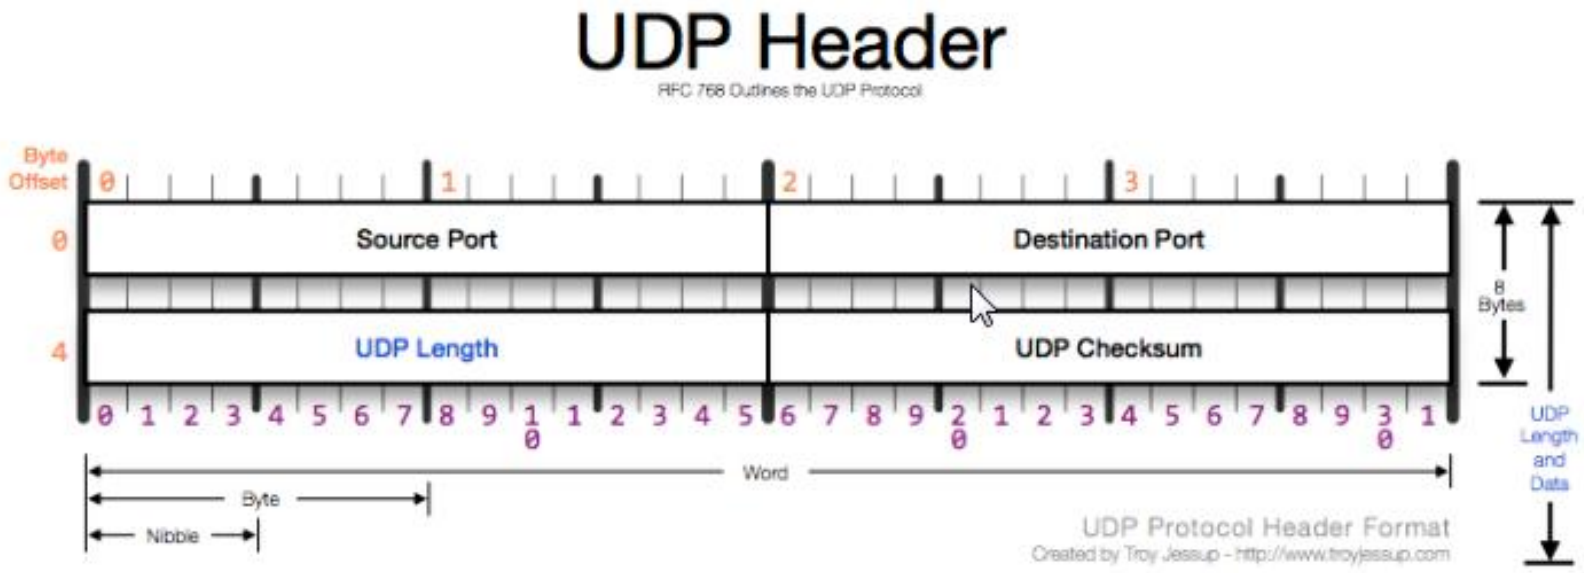
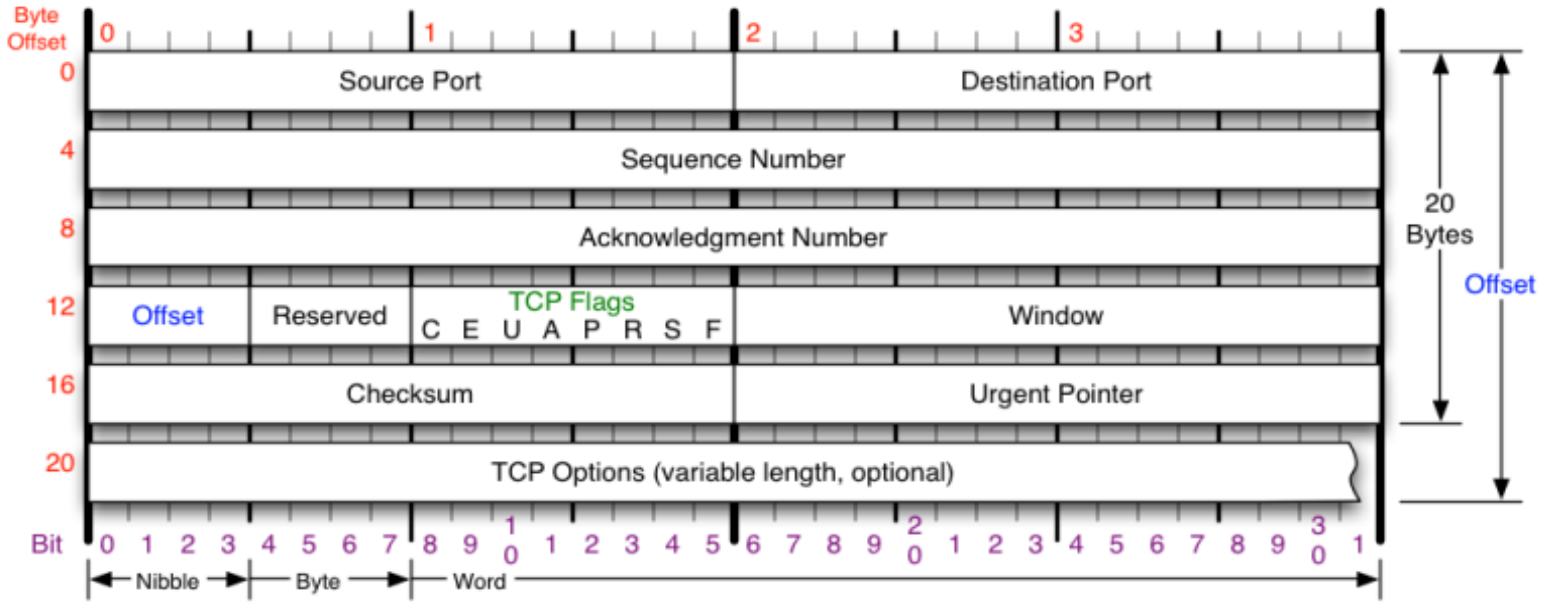
UDP Header Format



Source http://www.troyjessup.com/headers/UDP_Header.png

TCP Header Format



TCP Flags

C E U A P R S F

Congestion Window
C 0x80 Reduced (CWR)
E 0x40 ECN Echo (ECE)
U 0x20 Urgent
A 0x10 Ack
P 0x08 Push
R 0x04 Reset
S 0x02 Syn
F 0x01 Fin

Congestion Notification

ECN (Explicit Congestion Notification). See RFC 3168 for full details, valid states below.

Packet State	DSB	ECN bits
Syn	0 0	1 1
Syn-Ack	0 0	0 1
Ack	0 1	0 0
No Congestion	0 1	0 0
No Congestion	1 0	0 0
Congestion	1 1	0 0
Receiver Response	1 1	0 1
Sender Response	1 1	1 1

TCP Options

0 End of Options List
1 No Operation (NOP, Pad)
2 Maximum segment size
3 Window Scale
4 Selective ACK ok
8 Timestamp

Checksum

Checksum of entire TCP segment and pseudo header (parts of IP header)

Offset

Number of 32-bit words in TCP header, minimum value of 5. Multiply by 4 to get byte count.

RFC 793

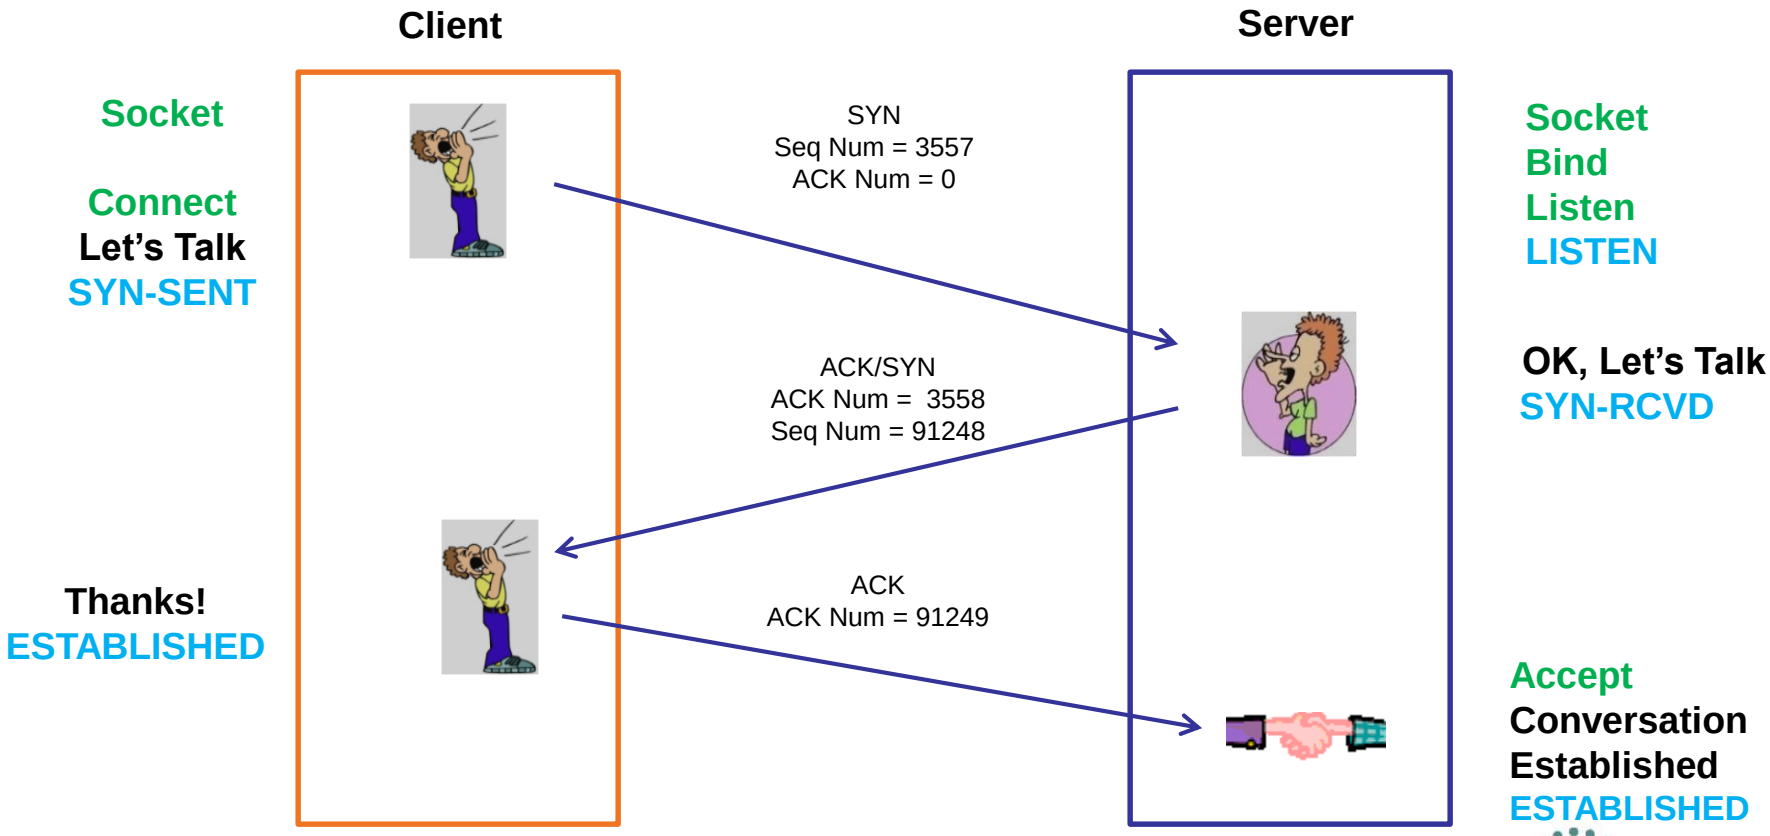
Please refer to RFC 793 for the complete Transmission Control Protocol (TCP) Specification.

Source http://nmap.org/book/images/hdr/MJB-TCP-Header-800x564.png

TCP Flags

- **URG** (Urgent) – Rarely used; indicates the Urgent Pointer field should be examined.
- **ACK** (Acknowledgement) - Segment contains an acknowledgment. Every segment should have ACK except for SYN or RST segments.
- **PSH** (Push) – Bypass buffering and send/receive the data immediately.
- **RST** (Reset) – Abnormal session termination, close the connection explicitly
- **SYN** (Synchronize) - Synchronize Sequence Numbers to establish a connection
- **FIN** (Finish) – Transaction finished, no more data from sender (but doesn't close connection explicitly)

TCP - Establishing a Connection
The 3 Way Handshake (3 segments)



TCP - Establishing a Connection

Selective ACK – Receiver sends ACK ranges so sender can retransmit without guesswork.

- ***What could be the potential Window size?***
- ***What's the actual Window size?***
- ***What's the max number of segments?***

TCP Option – Window Scaling (RFC 1323)

- To take advantage of a network with high bandwidth and high delay. E.g, 10 Mbps with RTT=200ms.

  Max amount of data in one-way transit = B x D

  10 Mbps x 0.1 s = 1 Mb = 125,000 bytes vs. 65535 (52% utilization)
- Use the *Window Scaling* option to increase the TCP Receive Window size above its max value of 65,535 bytes.
- Specifies a count value (0 to 255) by which the TCP header value should be bitwise left-shifted; i.e., multiply by **$2^{n.}$**

TCP Option – Selective ACK (RFC 2018)

- Cumulative ACK vs. Selective ACK (SACK)
- Cut down # of retransmissions
- Check both sides are supporting SACK

Inferring Packet Loss from ACKs

- Duplicate ACKs tells us:
  - Some new data did arrive but it was not next segment
  - The next segment might be lost
- Treat 3 Duplicate ACKs as a loss
  - Retransmit next expected segment - Fast Retransmit

TCP - Data Transfer (MSS = 1460) ; Slow Start

Why were these packets discarded?

- **Discard Reason Code**
  - *Comm Server IP & SNA Codes:*

Discard Reason Code	Category
1 – 4095	OSA
4096 – 8191	Interface and IP layer
8192 – 12287	TCP layer
12288 – 20479	Reserved

  - 4114 (IP_MAC_BRDCST):
    The MAC broadcast packet not accepted.
- Destination IP = 172.29.191.255 ?

Discarded Packets - continued

- The drop reason code 4114 usually indicates that the packet has a non-broadcast destination IP address and a broadcast media header (the broadcast indicator is on in the media header). This is likely to be caused by an invalid locally administered MAC address.
- Big switched LAN => broadcast flood; use VLAN to preserve bandwidth
- **netbios-ns**
  - NetBIOS Name Service (over UDP port 137)
  - Similar to DNS
  - Name Query request

DNS

- UDP/TCP Port 53
  - Message ID – Transaction ID that associates DNS queries with responses
  - Some of the flags in DNS header
    - Request/Response
    - Recursion Desired (RD)
    - Truncation Occurred (> 512 bytes)
    - Response Code
      - *0 – No Error*
      - *1 – Format Error*
      - *2 – Server Failure*
      - *3 – Name Error*
      - *4 – Not Implemented*
      - *5 - Refused*

Source Port : 10432      Remote Port : 21 ftp control
Seq. Number : 1257181349      Ack. Number : 452077435
Window : 64180      Flags : ACK PSH

FTP Data
Command : PORT
Parameters : 137,72,43,137,40,196
```

FTP Analysis – PORT command continued

Active FTP

- Server initiates the data connection
- PORT command contains the data connection listening port

PORT 137,72,43,137,40,196

- Specifies that the FTP Server will initiate the data connection
- Client's IP Address: 137.72.43.137
- Client's Port: 40 * 256 + 196 = 10436
- Expect to see a SYN packet:
  - from server (137.72.43.207, port 20)
  - to client (137.72.43.137, port 10436)

FTP Analysis – check the corresponding Sniffer trace

FTP Analysis

Sniffer trace shows the PORT command was sent to the server but there was no SYN packet coming in – SYN packet was "lost"

Might be related to firewall issues - check firewall setting, FTP.DATA and TCP PROFILE settings.

Passive FTP:

- Client initiates the data connection.
- Check the reply to the PASV command to determine the IP address and Port number of the server for the data connection.

FTP Analysis – a Good PASV

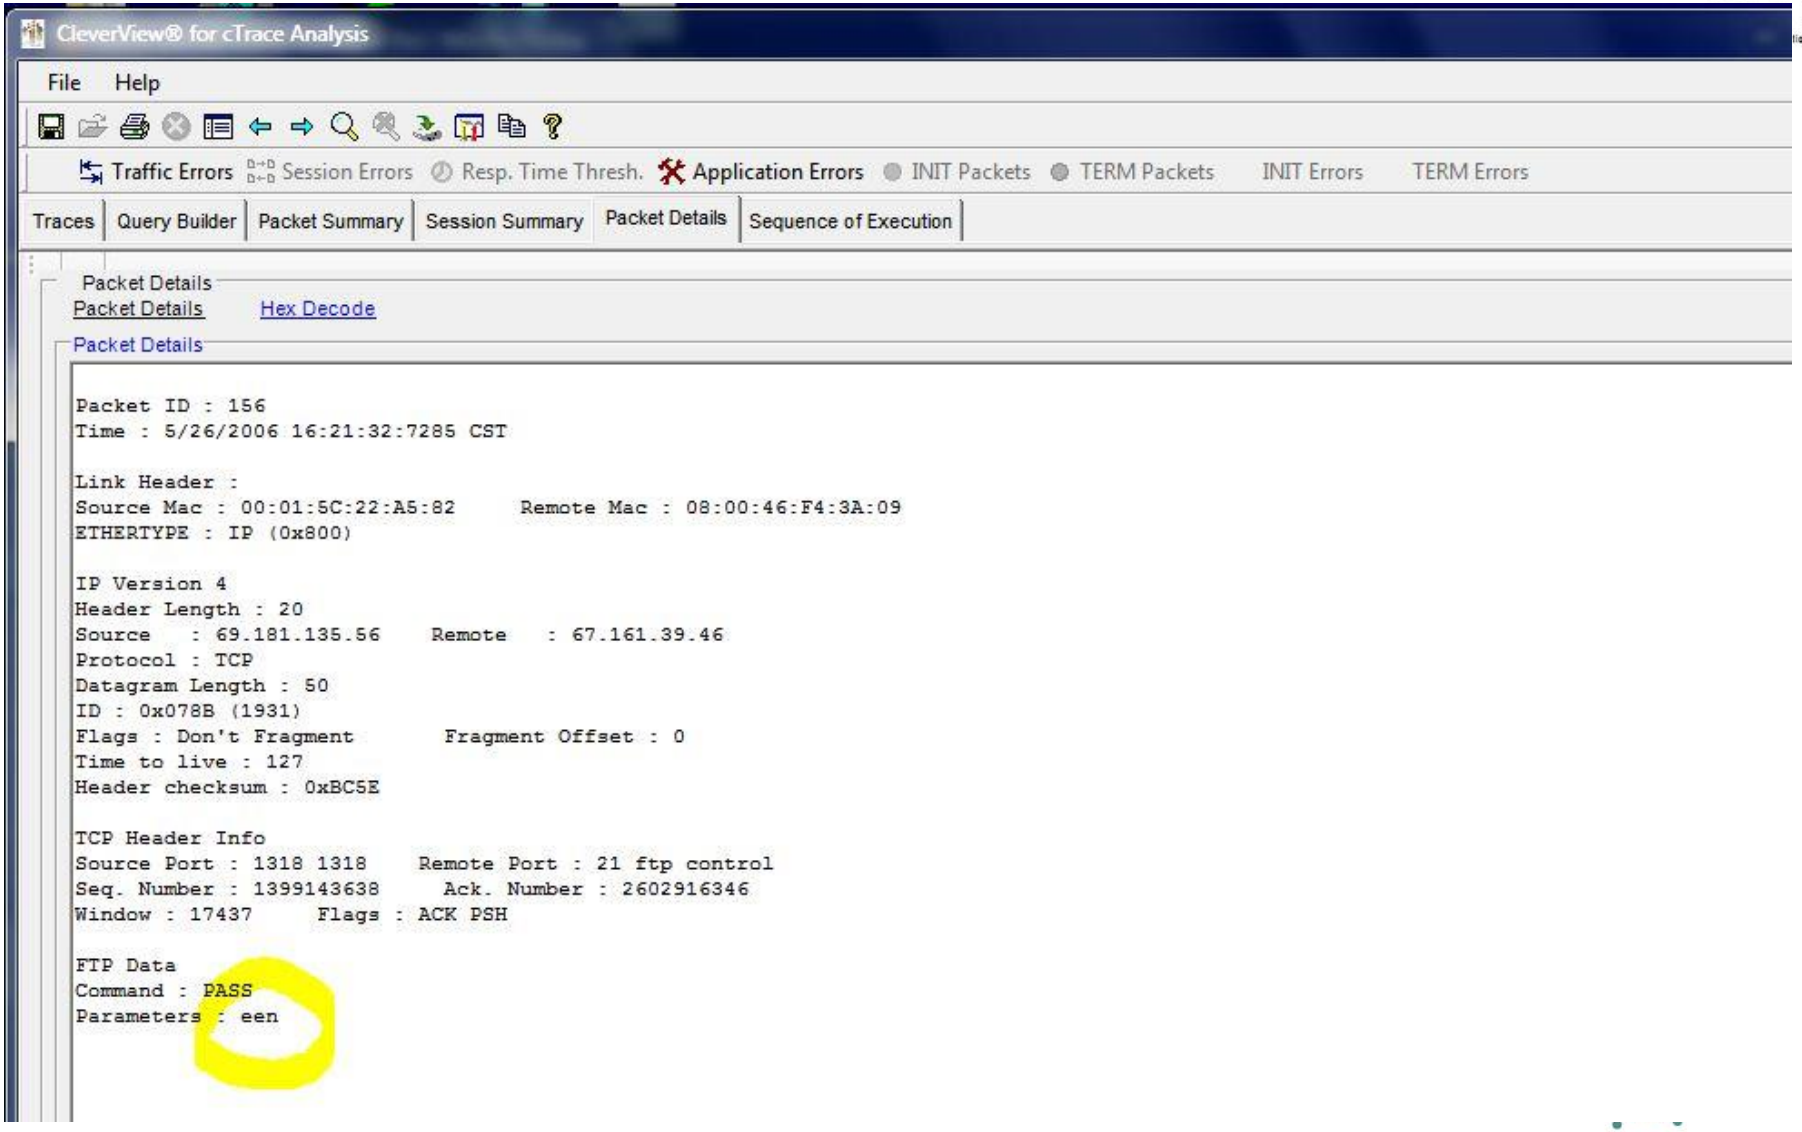
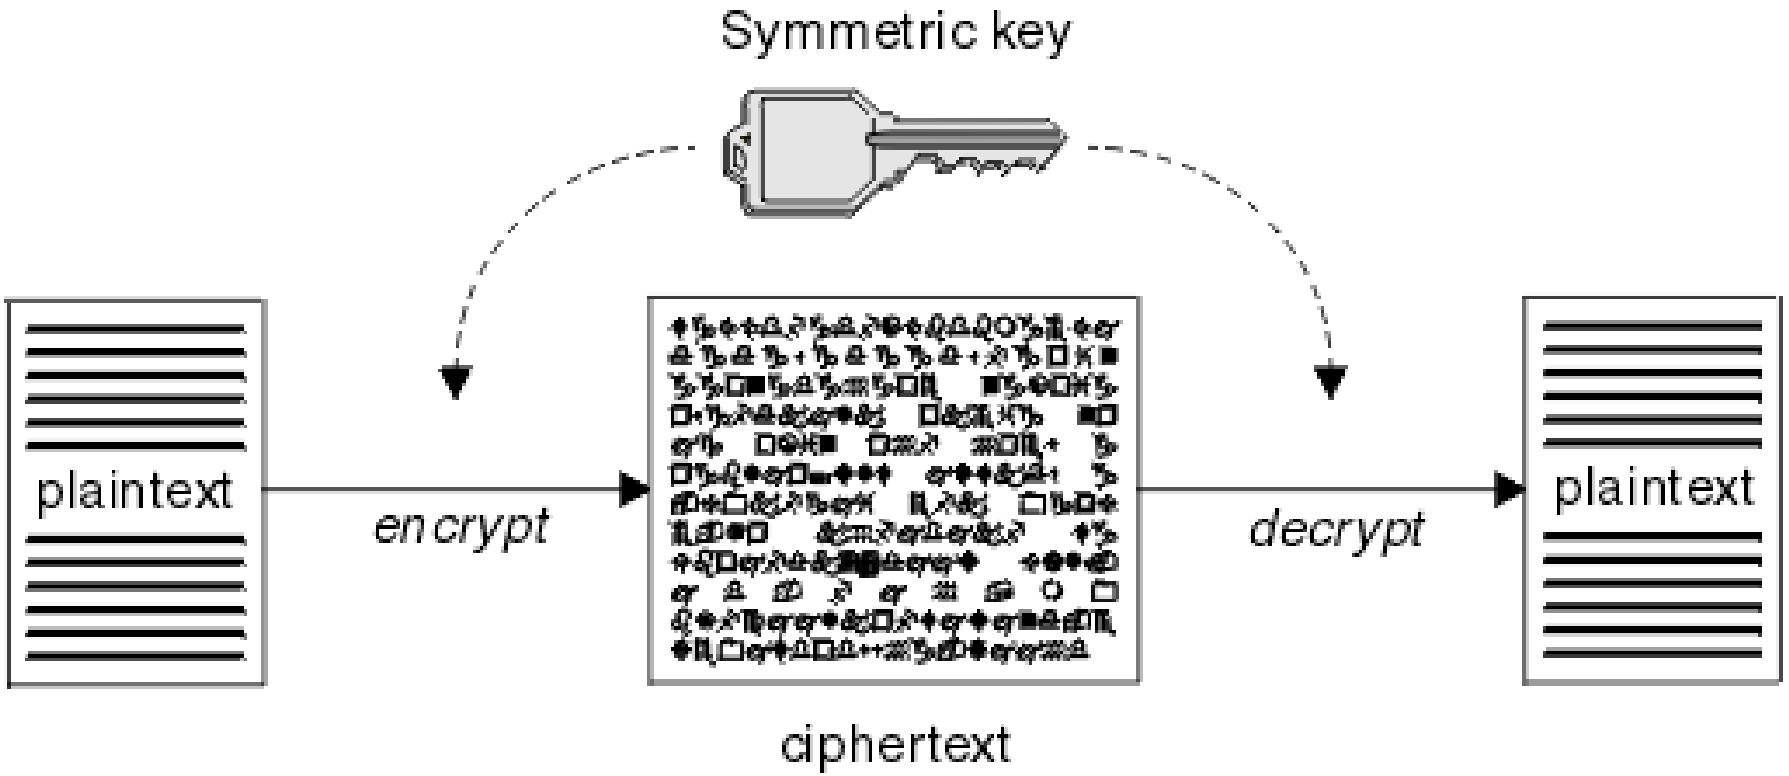
FTP Brute Force Attack – Check PASS Command Packet Details



TLS/SSL
https (Port 443), AT-TLS (appl. port)

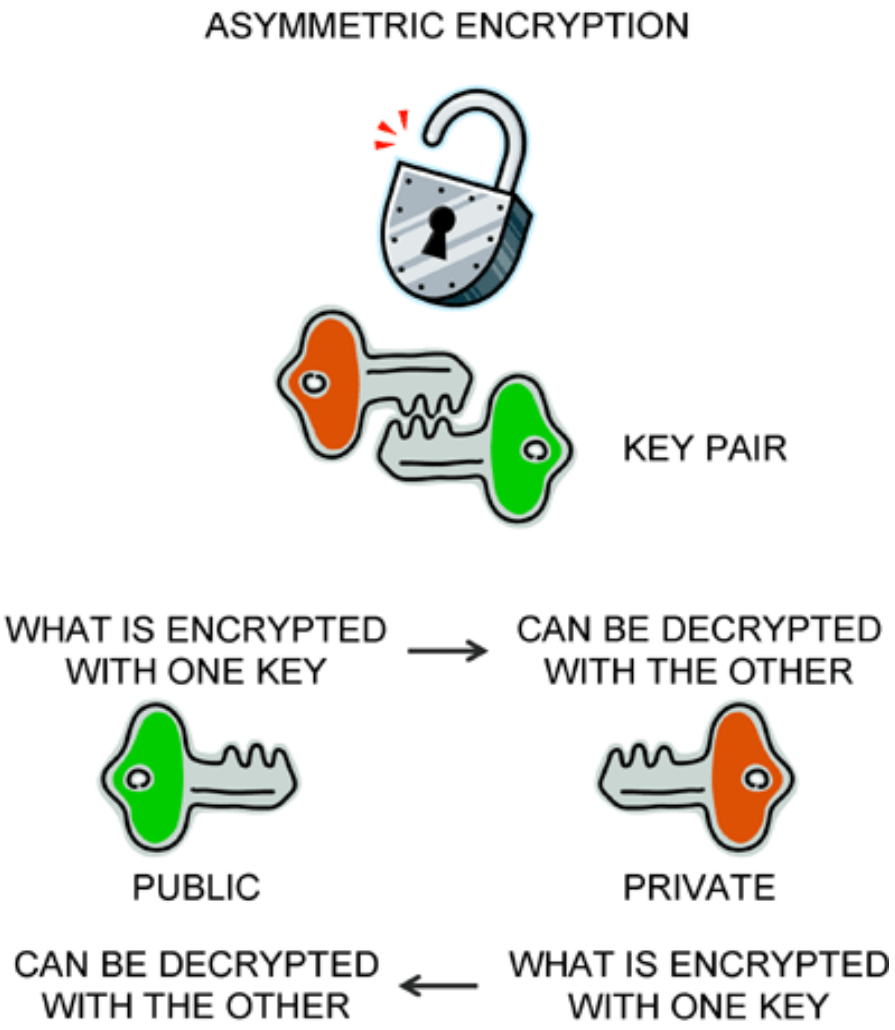
- Transport Layer Security provides security for communications over networks by encrypting the segments at the transport layer end to end.
- TLS V1.0 (RFC 2246) is based on SSL V3.0.
- It does not require the client and the server to arrange for a secret key to be exchanged *before* the transaction.
  - Asymmetric keys (public/private) for handshaking and secret key exchange.
  - Secret key (symmetric) mechanism for subsequent communication.

TLS/SSL, AT-TLS – Secret Key (Symmetric)



Source: http://middleware.its.state.nc.us/middleware/Documentation/en_US/htm/csqzas00/csq01skc.gif

TLS/SSL, AT-TLS – Public/Private Keys

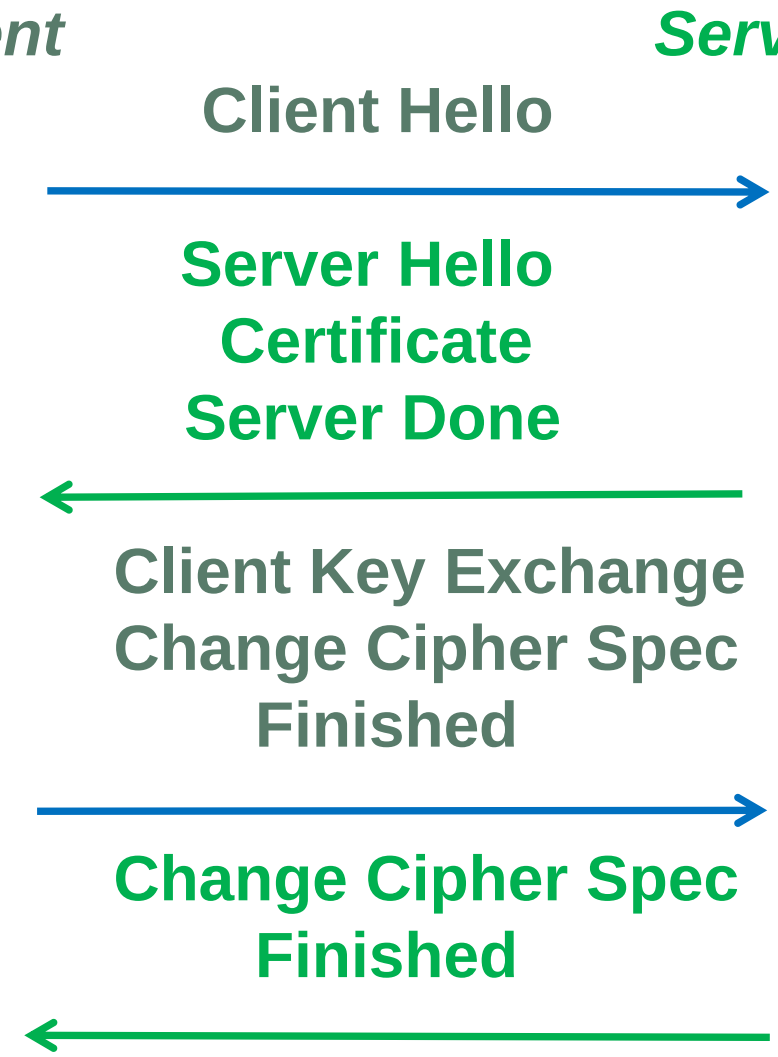


Source: http://www.teracomtraining.com/tutorials/teracom-tutorial-asymmetric-encryption.gif

TLS/SSL Basic Flow

- Negotiate cipher suites and compression algorithms.
- Authenticate the server (and optionally the client) through certificates and public/private keys.
- **Server -> Client:** The server uses its private key to encrypt and the client uses the public key to decrypt.
- **Client -> Server:** the client uses the public key to encrypt and the server uses its private key to decrypt.
- Exchange random numbers and a pre-master secret, which is used with other data to create a shared secret key – the **Master Secret** is used to encrypt/decrypt the data.

TLS/SSL Handshake – Server Authentication



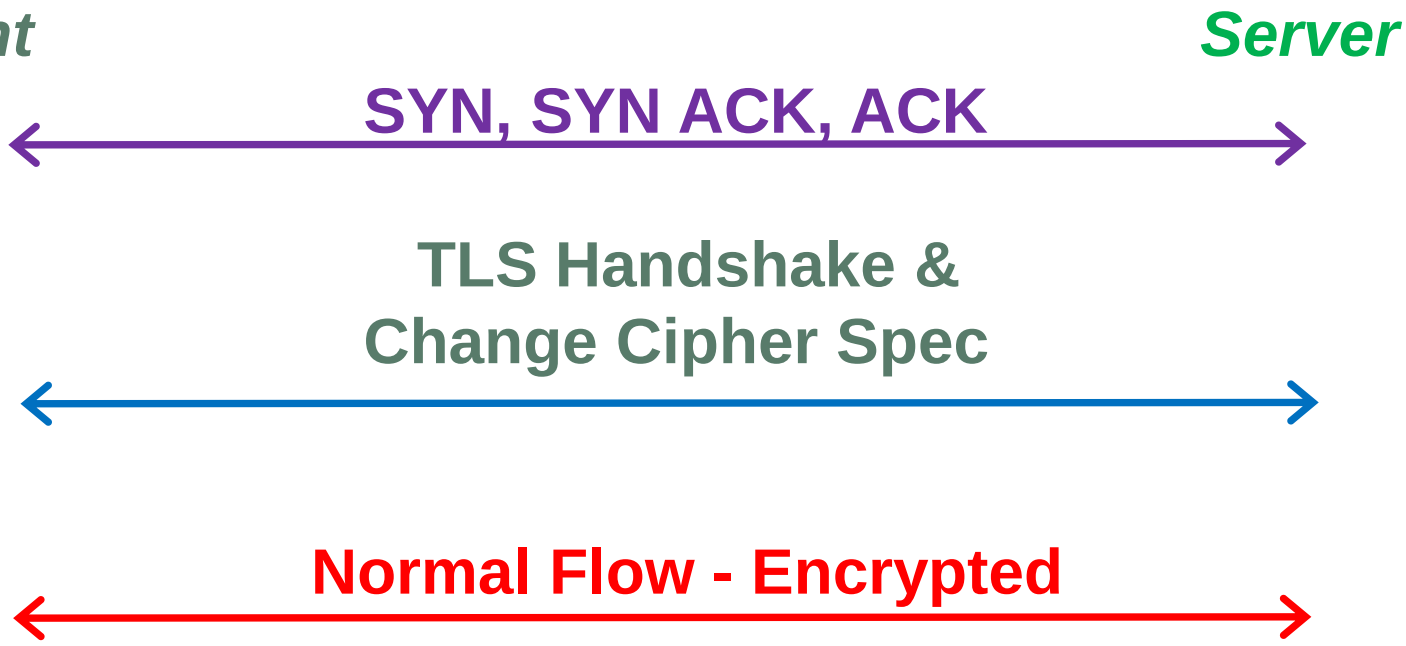
Hello
Highest SSL/TLS version supported
Ciphers and Compression Method
Session ID
Random data for key generation

Certificate:
Server Certificate – contains server's public key.

Client Key Exchange
Client generates the pre-master secret and encrypt it with server's public key.
Both the client and the server generate the Master Secret key (symmetric) on their own using the pre-master secret and the random data that is generated from the SERVER_HELLO and CLIENT_HELLO commands.

Change Cipher Spec
Indicates that all subsequent data will be encrypted.

AT-TLS Flow



HTTPS (Port 443)

TLS Header

Offset	Length	Description	Decimal Value	Meaning
0	1	Content Type	20 (0x14)	Change Cipher Spec
			21 (0x15)	**Alert**
			22 (0x16)	Handshake
			23 (0x17)	Application
1	2	Version		
1	1	Major Version	3	
2	1	Minor Version	0	SSLv3
			1	TLS 1.0
			2	TLS 1.1
			3	TLS 1.2
3	2	Length	N	The length of the Protocol Message
5	N	Protocol Message		

TLS Alert Protocol (Content Type = 21)

Offset	Length	Description	Decimal Value	Meaning
5	1	Level of alert	1	Warning – connection or security may be unstable
			2	Fatal – connection or security may be compromised, or an unrecoverable error has occurred.
			Others	Encrypted alert
6	1	Alert Description Type	0	Close notify
			10	Unexpected message
			20	Bad record MAC
			21	Decryption failed
			22	Record overflow
			30	Decompression failure
			40	Handshake fail
			41	No certificate
			42	Bad certificate
			43	Unsupported certificate
			44	Certificate revoked
			45	Certificate expired
			46	Certificate unknown
			47	Illegal parameter
			48	Unknown CA (Certificate Authority)
			49	Access denied
			50	Decode error
			51	Decrypt error
			60	Export restriction
			70	Protocol version not supported
			71	Insufficient security
			80	Internal error
			90	User cancelled
			100	No renegotiation
			110	Unsupported extension

Sample TLS/SSL Decoding

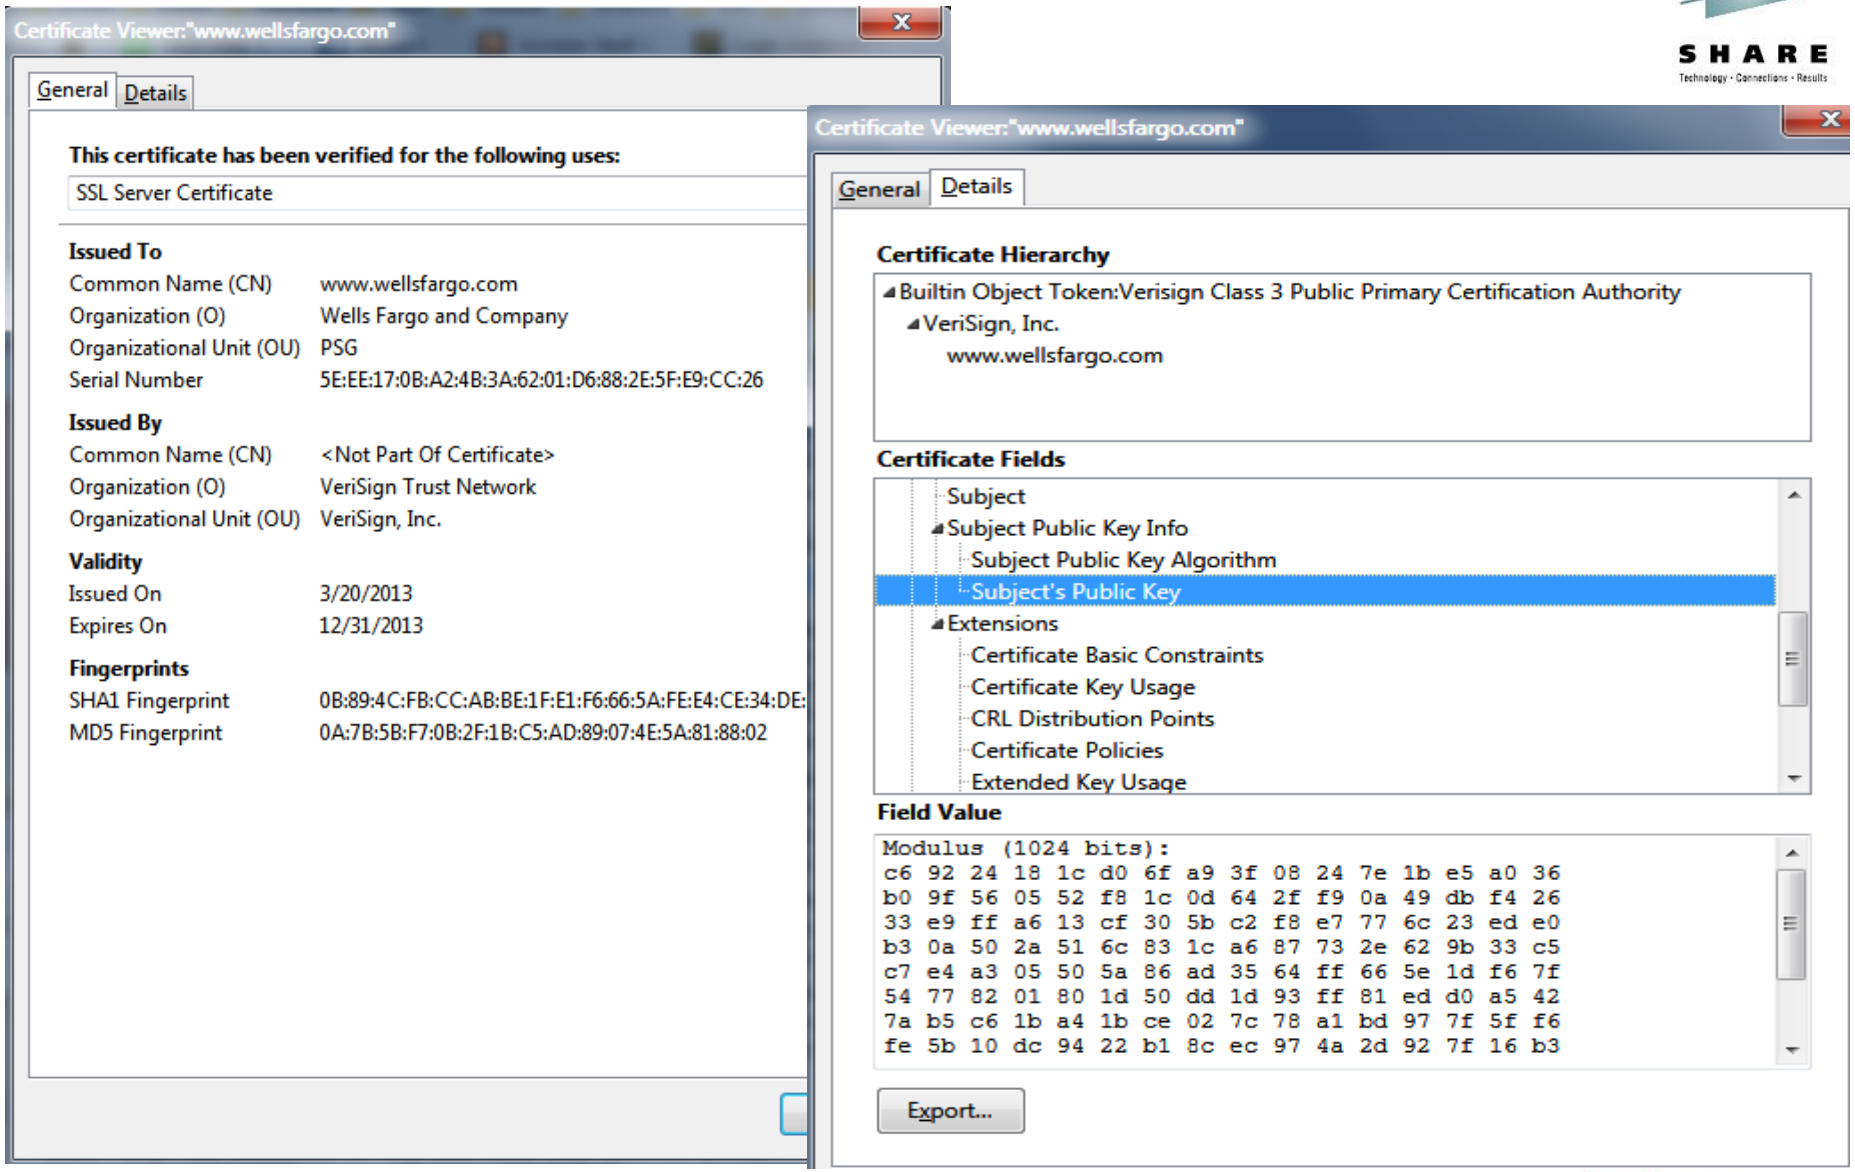
Hex Data:
16 03 01 00 C1 01 00 00 BD 03 01 4B 71 F1 69 DA 10 ….

Secure Socket Layer
- TLSv1 Record Layer: Handshake Protocol: Client Hello
  - Content Type: Handshake (22)
  - Version: TLS 1.0 (0x0301)
  - Length: 193
  - Handshake Protocol: Client Hello
    - Handshake Type: Client Hello (1)
    - Length: 189
    - Version: TLS 1.0 (0x0301)
    - Random
      - GMT Unix Time: Feb 9, 2010 15:36:09.0000000000
      - Random Bytes: DA10 …
    - Session ID Length: 32
    - Session ID: 2D585DAEF198D9BB951DD9F58D7766465B88A493B98ACC3C...
    - Cipher Suites Length: 70
    - Cipher Suites (35 suites)
      - Cipher Suite: TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA
      - Cipher Suite: TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA
      - Cipher Suite: …….

28 Random Bytes - to be used with the premaster secret to generate the symmetric key.

Ciphers are listed in order of preference – from the strongest to the weakest

Sample Digital Certificate



AT-TLS Data Decryption

- AT-TLS data is always encrypted in the packet trace. By default, Data Trace does not show unencrypted AT-TLS data either for security reason.
- However, user can configure AT-TLS policy to turn on the CtraceClearText parameter to trace the unencrypted application data.
