Session Number 13541
Hines Room 202

**Part 1: Create
Certificates**

In this 1st Document:

- Read Descriptions of 2 required Scenarios (pp. 3-7).
- Find your team’s IPv4 interfaces and addresses (pp. 11-22).

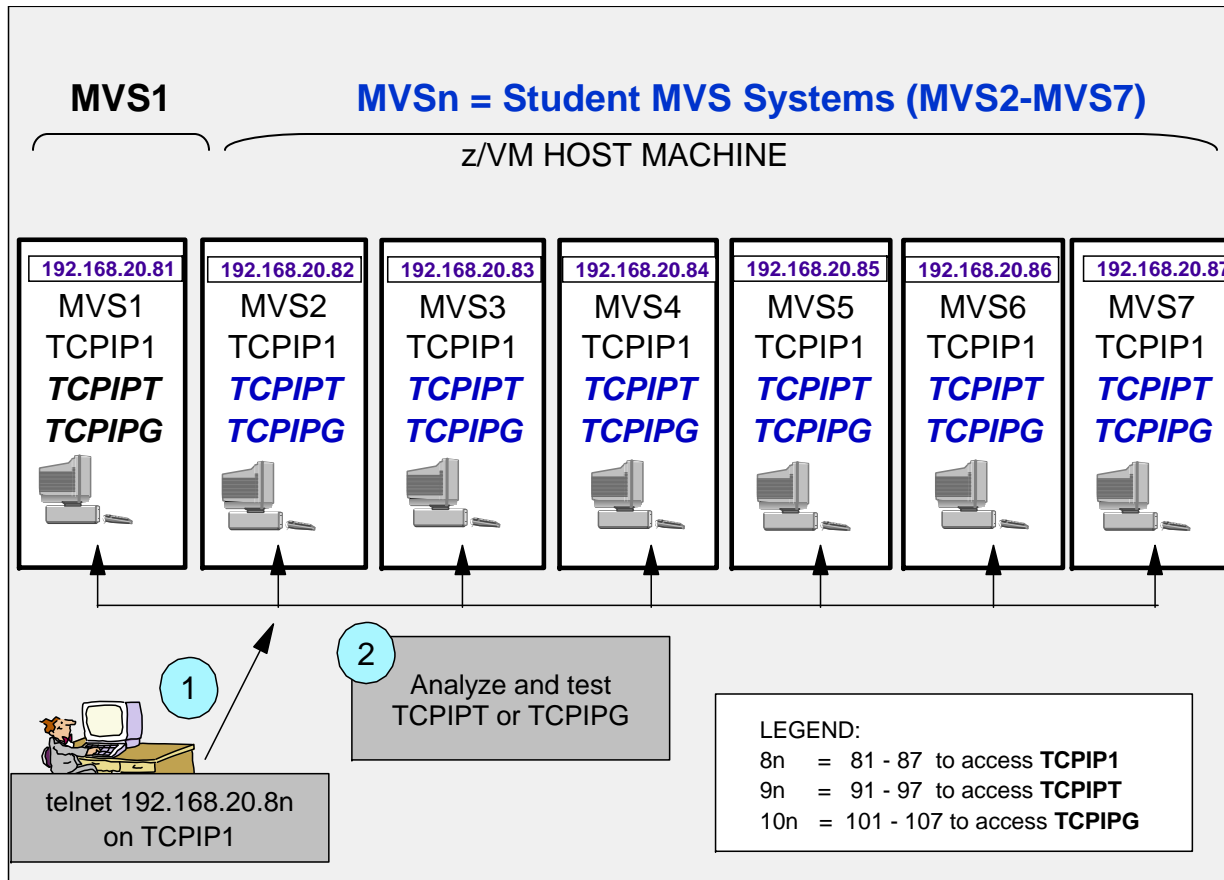

In the 2nd Document:

- Lab starts on page 9.

Abstract

- Many security mandates require that certain types of data, including passwords, be kept confidential.
- In this lab attendees will generate with RACF x.509 digital certificates and test them for an AT-TLS implementation of FTP that has already been configured for them.
- **LAB DIFFICULTY:** INTERMEDIATE
- **PREREQUISITES:**
 - MVS ISPF experience
 - Understanding of x.509 certificate processing during SSL/TLS/AT-TLS connections. That is:
 - Difference between Certificate Authority Certificate and Personal Server or Client Certificates
 - Server Authentication with SSL/TLS/AT-TLS
- **NOTE:**
 - This Certificate Generation lab accommodates up to 12 teams simultaneously. (Teams = 1 to 2 people)
 - 6 teams work on TCPIPT stacks with the FTPTX server;
 - another 6 teams work on TCPIPG stacks with the FTPGX server.

Student MVS_n Tests with MVS1; 2 Student TCP/IP Stacks (TCPIPT,TCPIPG)

LEGEND:
 "n" represents MVS suffix (1-7)
 Example: MVS_n = MVS1-7
 Example: 8_n = 81-87

NOTE:
 This Certificate Generation lab accommodates up to 6 teams of 1-3 members simultaneously.

USER_n01 works on the TCPIPT Stack and the FTPTX server on PORT 2021 (User101 – User701)

USER_n02 works on the TCPIPG Stack and the FTPTGX server on PORT 2021 (User102 – User702)

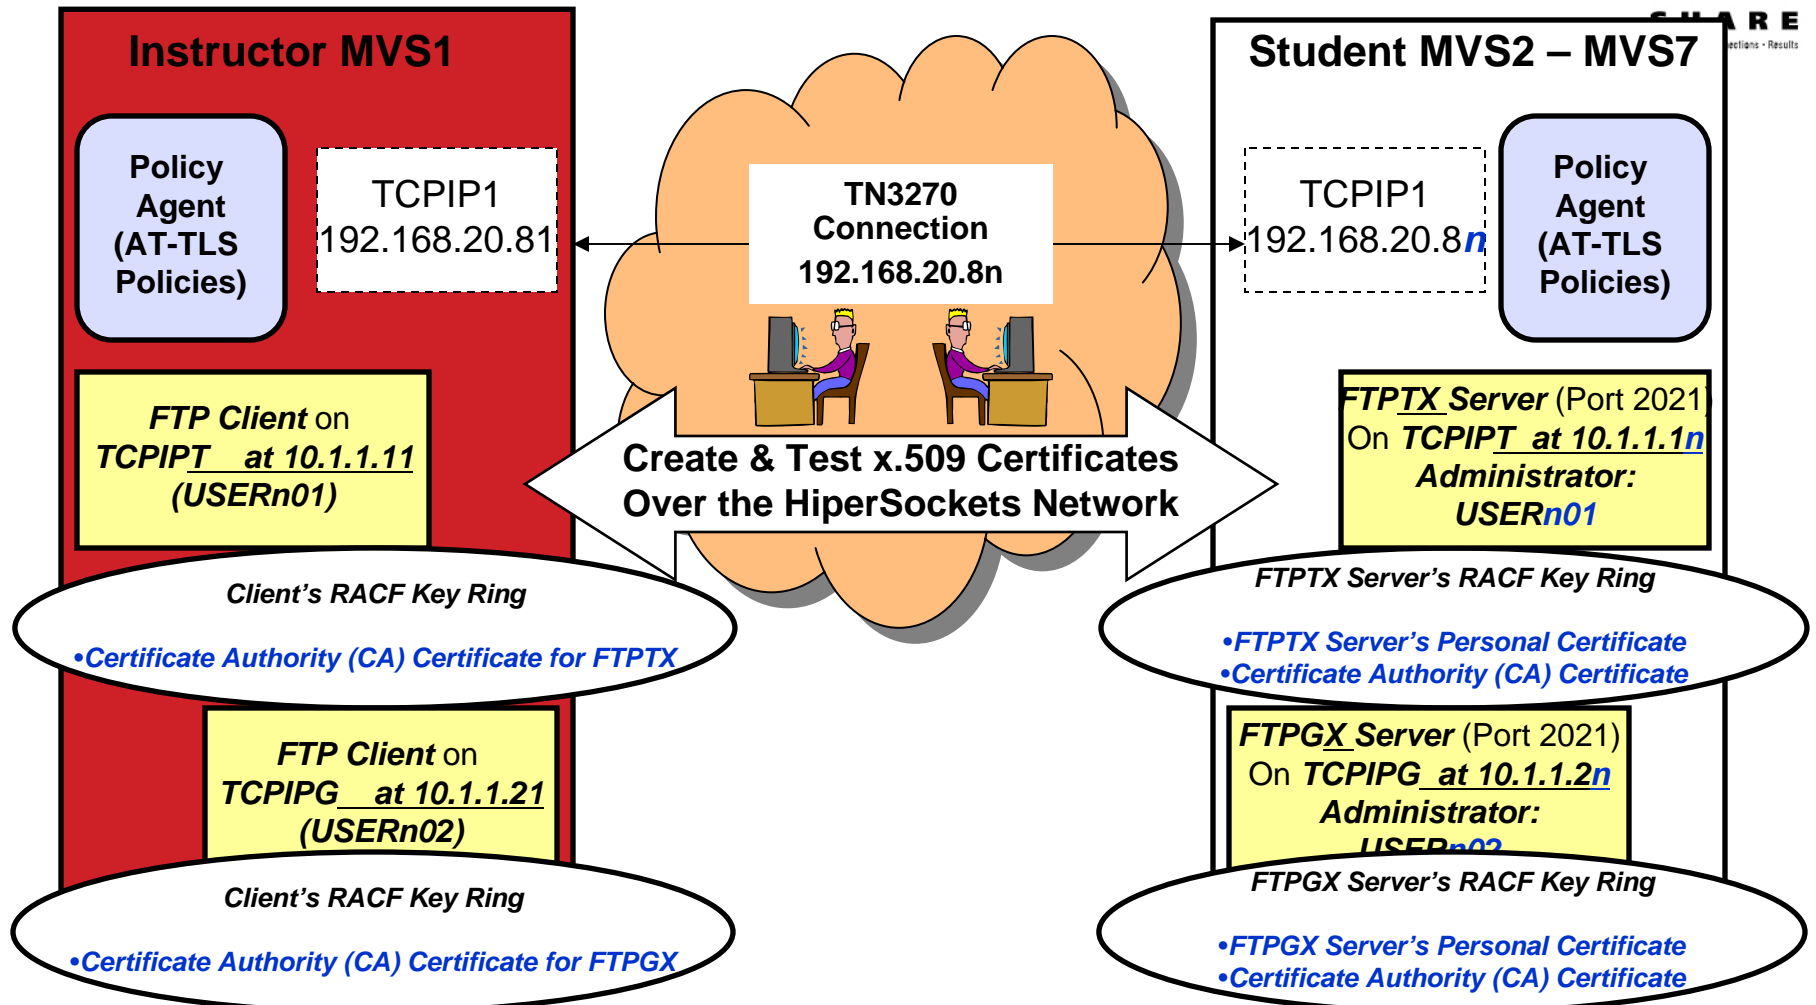

1. Telnet into Maintenance Stack (TCPIP1) at the MVS_n Guest Machine.
 - A. Initialize and Test your TCPIPT or TCPIPG stack with the instructor profile.
 - B. Edit TCP/IP configurations for Test Stack (TCPIPT or TCPIPG) with ISPF editor under TSO
2. Initialize and Test your TCPIPT or TCPIPG with your new profile.
3. You will test your connections against the Instructor MVS: MVS1.

Scenarios: Testing FTP Secured with AT-TLS between MVS1 & Student MVS_n

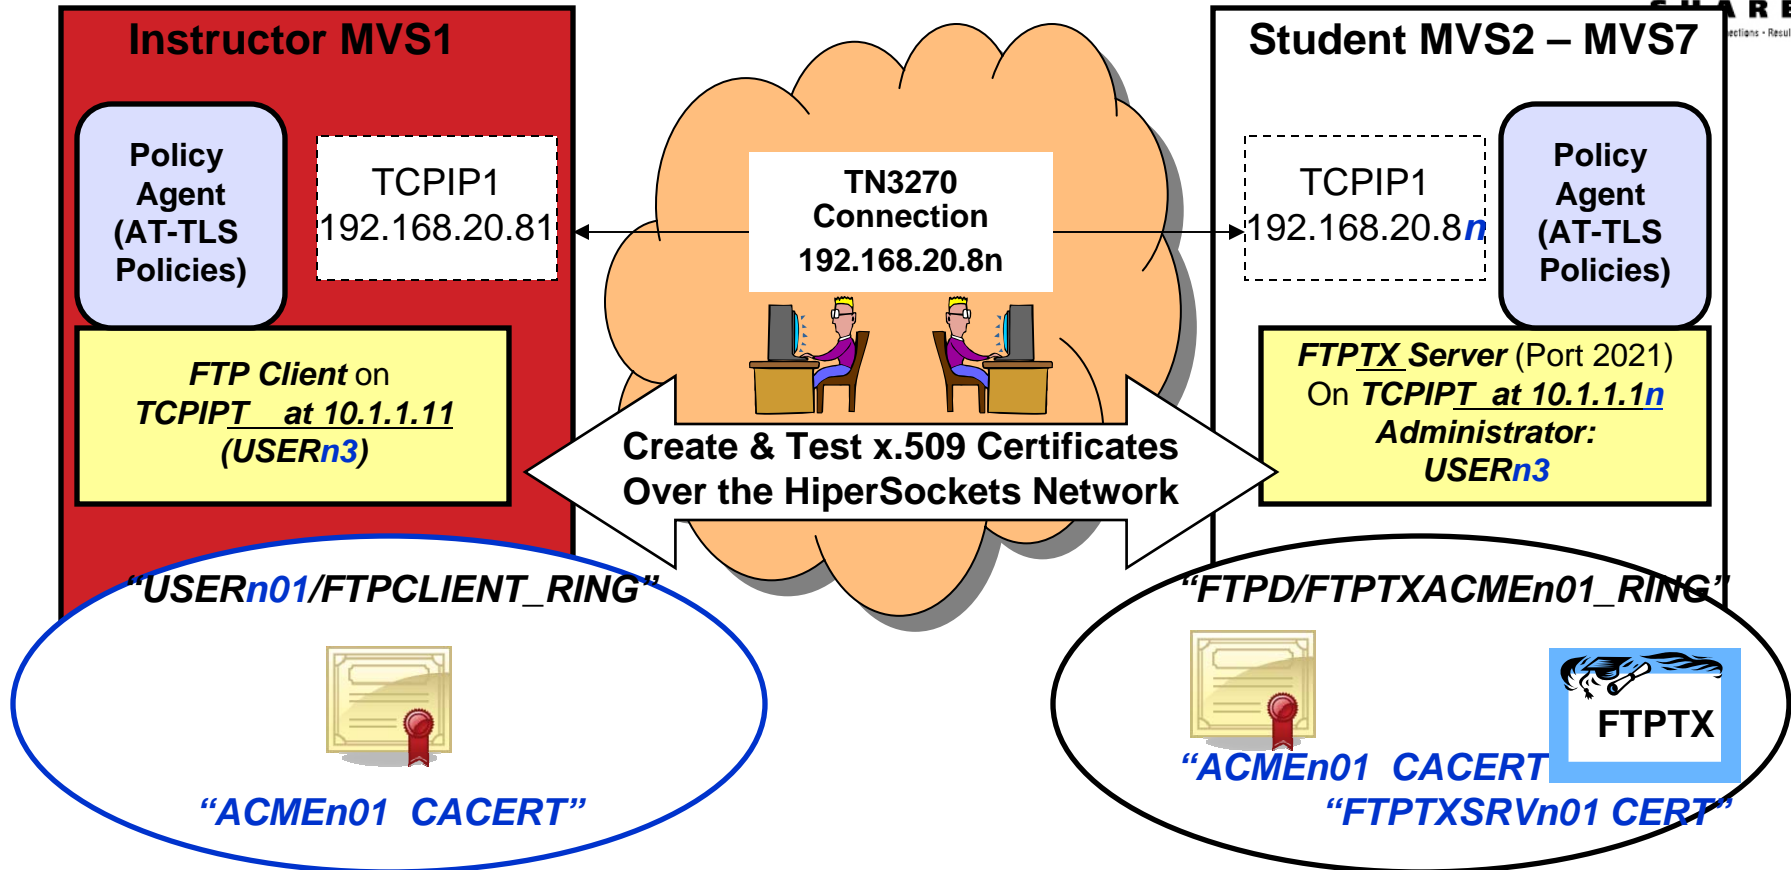

SHARE
Sessions • Results

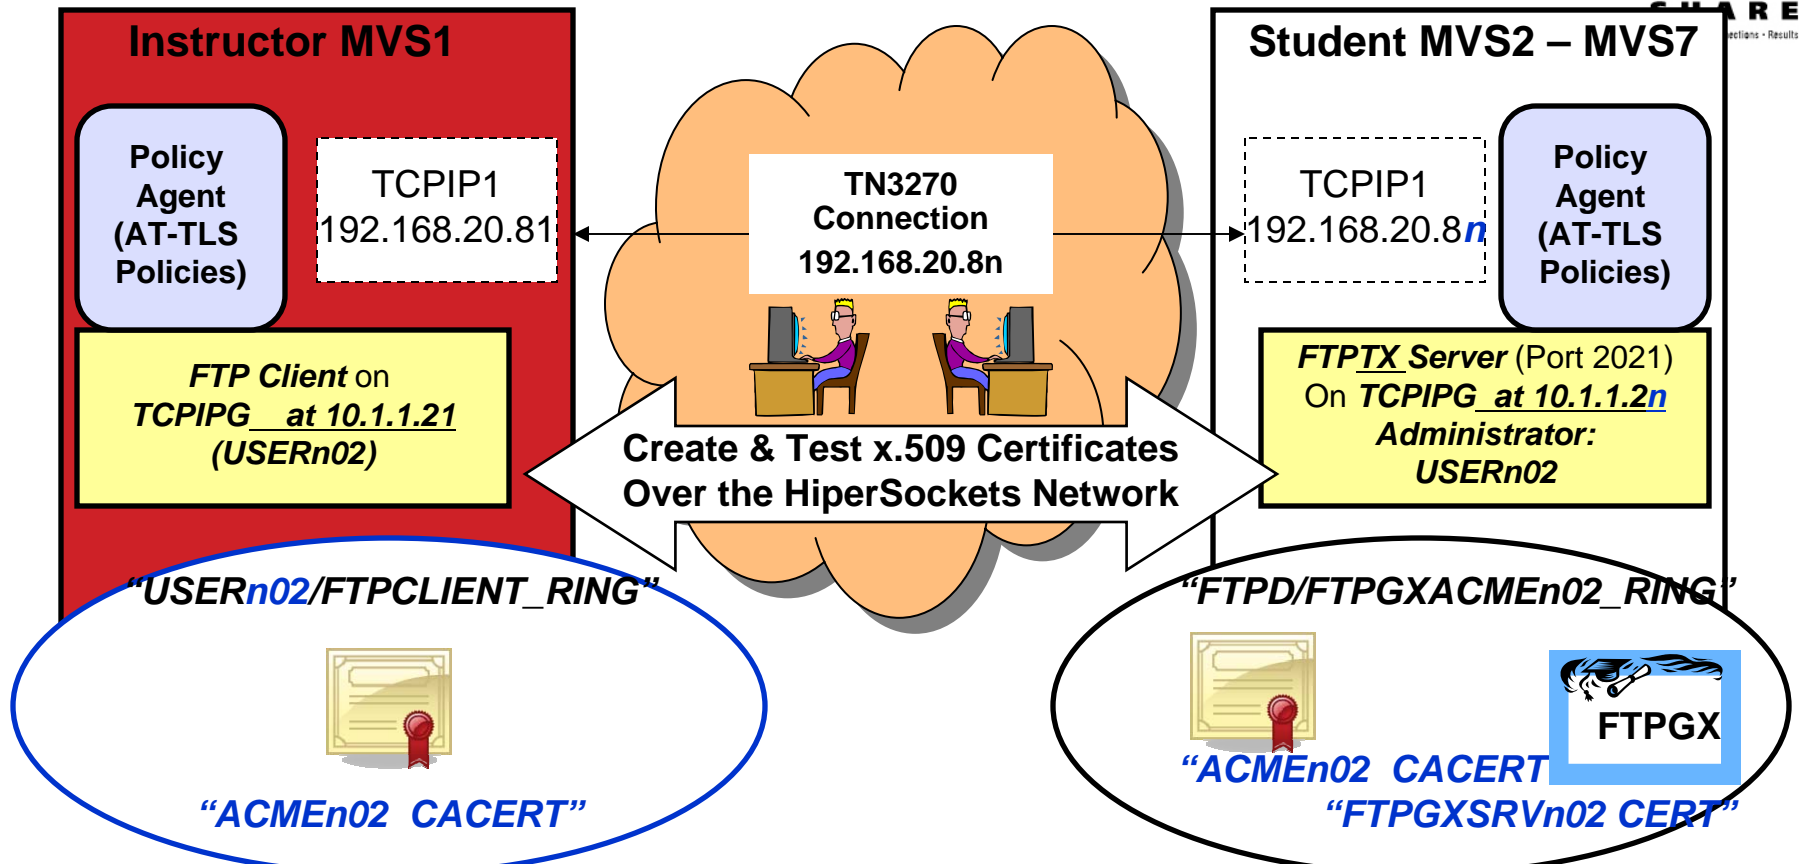

1. A different MVS_n Image (MVS2 through MVS7) is assigned to each Student Team (USER_{n0x}).
 - (“n” = MVS Suffix)
2. Each Student Team creates the x.509 certificates and Key Rings to secure the userids, passwords, and traffic between an FTP client at MVS1 and the FTP Server (“FTPTX” or “FTPGX”) on the team’s assigned MVS_n.

Key Rings and Certificates for Testing: FTPTX at TCPIPT on Student MVS_n

1. The Certificate Authority Certificate for each Team's MVS_n image is named "ACME_n01 CACERT."
2. Each FTPTX Personal Certificate at each Team's MVS_n image is named "FTPTXSRV_n01 CERT."
 - The OMVS Segment of "TCPIP" is assigned to the FTPX started task. Therefore, "TCPIP" must be defined as the owner of the FTPTX Server Certificate.
3. The FTP Server Key Ring is named "FTPD/FTPTACME_n01_RING." It contains the FTPX Server's Personal Certificate and the MVS_n's CA Certificate which has signed the Server's Certificate.
4. The FTP Client Key Ring is named "USER_n01/FTPCLIENT_RING." It contains the CA Certificate that has signed the FTPTX Server Certificate.

Key Rings and Certificates for Testing: FTPGX at TCPIPG on Student MVS_n

1. The Certificate Authority Certificate for each Team’s MVS_n image is named “ACME_{n02} CACERT.”
2. Each FTPGX Personal Certificate at each Team’s MVS_n image is named “FTPGXSRV_{n02} CERT.”
 - The OMVS Segment of “TCPIP” is assigned to the FTPX started task. Therefore, “TCPIP” must be defined as the owner of the FTPTX Server Certificate.
3. The FTP Server Key Ring is named “FTP_{n02}/FTPGACME_{n02}_RING.” It contains the FTPGX Server’s Personal Certificate and the MVS_n’s CA Certificate which has signed the Server’s Certificate.
4. The FTP Client Key Ring is named “USER_{n02}/FTPCLIENT_RING.” It contains the CA Certificate that has signed the FTPGX Server Certificate.

Configuration Assistant BINARY file with AT-TLS Policies is:
Tch2013_CreateandREFRESHLabs-01

Instructor-run Jobs Prior to Lab

At one MVS: UNIX Copy Jobs for Policy Agent Setup and Policies at all systems

- /BACKUP/CSPOLICY/CERTREFRESH/ussCERTCreateRefresh.sh (is for both the CREATE and REFRESH lab)

At one MVS: EMPTYSRC Delete of contents of USER.CS.SOURCE and of CERT REQUEST FILES from CERTRefresh Lab (Both Labs)

At one MVS: Copy of jobs into user.cs.source from SYS1.CS.CNTL(EMPTYCRE)

At MVS1:

- **SYS1.CS.CNTL(ACMED100)** – to delete the certificates and keyrings from previous class (MVS)
- SYS1.CS.CNTL(RACFPSEC) -- against shared RACF Database from one system
- SYS1.CS.CNTL(RACFP100) -- against shared RACF Database from one system
- SYS1.CS.CNTL(RACFSIZE) -- against shared RACF Database "*****"
- NOTE: Your instructor will already have initialized the following procedures at MVS1 – the system from which you will be testing:
 - /s TCPIP1 and /s TN3270 and /s FTPCCL
 - /s PAGENTT
 - /S TCPIPT,PROF=TCPSn1,CS=SYS1
 - /V TCPIP,TCPIPT,O,SYS1.CS.TCPPARMS(TLSON)
 - /s FTPTX,cs=sys1,data=dat1a
 - /S TCPIPG,PROF=TCPSn2,CS=SYS1
 - /V TCPIP,TCPIPT,O,SYS1.CS.TCPPARMS(TLSON)

 - /S tn3270t
 - TN3270T PROC PARMS='CTRACE(CTIEZBTN)',PROF=TN&CL1.A,CS=SYS1, DATA=DAT&CL1.A

FTP.DATA of FTPSAUTH specifies

Server Authentication Only

WARNING: If you are running both the create lab and the renew certificate lab, run the jobs EMPTYCRE and EMPTYSRC only once – it will copy what is needed for both labs

On Your MVS:

- 1) Your Instructor will have run these
 - 2) /s TCPIP1 and /s TN3270 and /s FTPCCL
 - 3) /s PAGENTT
- /S TCPIPT, CS=SYS1,PROF=TCPSn1
 - /V TCPIP,TCPIPT,O,SYS1.CS.TCPPARMS(TLSON)
