Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

SDUMP OA41354

- z/OS 1.12 and 1.13
- **New function APAR for System Availability. It reduces SDUMP's system and task non-dispatchable reset intervals. See APAR for details.**
- **PTFs: UA69037 and UA69038 (RSU1306)**

SDUMP OA41994

- z/OS 1.12 and up
- **Problem: partial SVC dumps due to MAXSPACE, or missing high virtual common storage in complete SVC dumps. This is due to incorrect processing of the high virtual common storage ranges in the storage range table.**
- **PTFs: UA69324 to UA69327 (RSU1307)**

RSM OA42391

- z/OS 1.12 and 1.13
- **Problem:** ABENDs or spin loop in RSM due to incorrect processing of the control block representing a high virtual common memory object.

In z/OS 1.13 this problem will occur if RSM component trace is turned off.

- **PTFs:** UA69452 and UA69453 (RSU1307)

System z Security Portal

- Enables you to receive the latest critical service information on security and system integrity APARs for z/OS and z/VM

- See instructions in:

http://www-03.ibm.com/systems/z/advantages/security/integrity_sub.html

- See also **Red Alerts** published on 04/09/11 and 02/27/13

Red Alerts (since last SHARE)

<https://www14.software.ibm.com/webapp/set2/sas/f/redAlerts/home.html>

- **02/27/13** Reminder to access the System z Security Portal
- **03/25/13** DB2 PM79520
- **05/29/13** DFSMS OA42277
 - **05/31/13** Updated alert for OA42277
 - **06/03/13** Updated alert for OA42277
