The Big Picture – how does IBM provide support

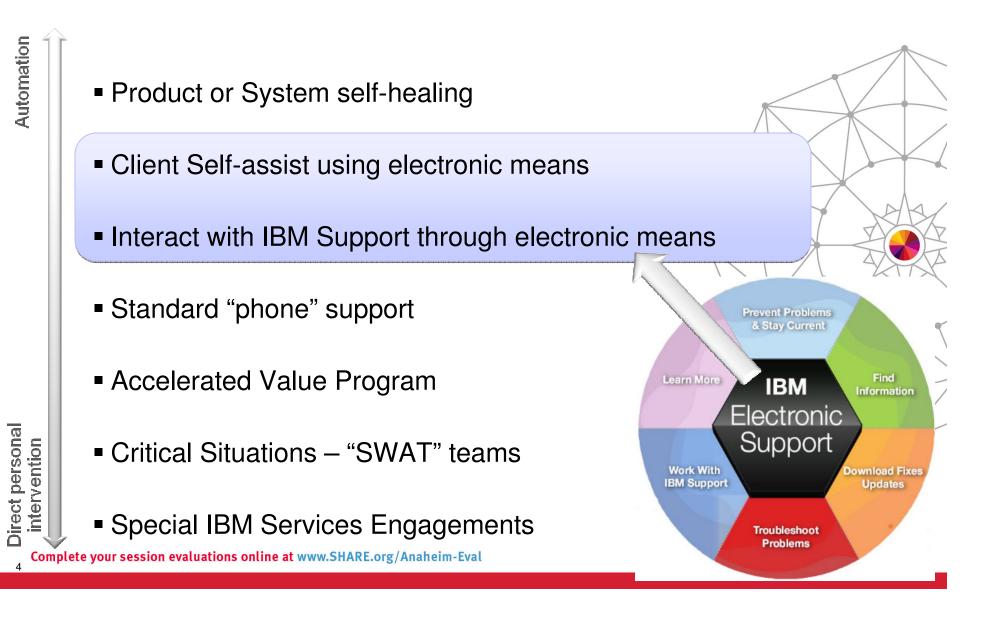

- Problem types and classification
- Key components of the Serviceability Strategy
 - Serviceability Framework / Delivery Platforms
 - Knowledge and Education
 - Problem Determination tools
 - Serviceability features in the product runtimes

Modes of Support Interaction

Key Components of the Serviceability Strategy

- Serviceability Framework / Delivery Platforms
 - Web-based eSupport resources, Support Portal, IBM Support Assistant (ISA), ISA Data Collector, Fix Central, Archive Explorer, ...
- Knowledge and Education
 - Technotes, Knowledge Engineering, IBM Education Assistant, WAS Support Technical Exchange, Problem Determination Courses, ...

Problem Determination Tools

 Java Health Center, Memory Analyzer, Automated Analysis, Cross-component Trace Viewer, Trace and Request Analyzer, WebSphere Config Visualizer, ...

Serviceability features in the product

- Log/trace, FFDC, hung thread detection, serviceability defect process, ...

Metrics and PMR Causal Analysis

- RETAIN statistics, OPC, Aged PMR reviews, SWAT debriefs, ad-hoc PMR reviews, ...

Many deliverables are the result of collaboration between many different teams – they are all discussed here without regard to origin

Addressing Common Challenges

in Anaheim

Collecting Key Data

Challenge:

To resolve software issues, analyzing key data is essential, but it is often hard to locate and collect in a timely manner

Shorten time to resolution

Quickly collect diagnostic files or run traces that are predefined for products. View files easily and, optionally, send to IBM swiftly.

-	
-	
	1000

Troubleshooting Problems

Challenge:

Complexity of certain problems and configurations requires specialized tooling

Discover root cause

Problem determination tooling that allows diagnostics and analysis for problem resolution.

Troubleshooting problems

- Application coding errors
- Environment variables
- Performance tuning
- Configuration problems

Complex problems

Symptom/solution _ discovery

- Many diagnostic files
- Many messages
- Importance of message

- Goal:
 - -Discover root cause
- Challenges:
 - -Complexity certain problems and configurations require specialized tooling
 - Discovery symptoms can be difficult to uncover and match to knowledge

Some Notes about Problem Determination Tools

The development of Problem Determination tools within IBM is not centralized

- Various product teams, support teams and individuals create their own tools
- The Serviceability Tools Team coordinates these various offerings and manages the platform
- Trying to centralize as many tools as possible in IBM Support Assistant or integrated in a Product

Sometimes there will be several tools with overlapping functions

- Various individuals may have their preferences for one tool over another
- The Serviceability Tools Team will help clarify and designate the tool(s) that are officially "preferred" by IBM for its Clients

Tools evolve over time

- Today's "best-of-breed" tool may be replaced by an even better one someday
- The Serviceability Tools Team manages the orderly deprecation and withdrawal of older tools when appropriate

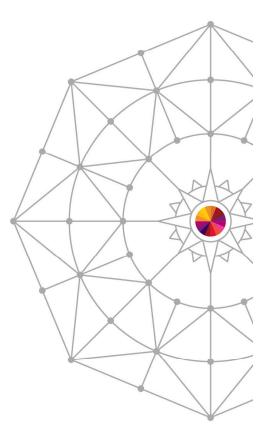

The current strategic push is towards server-based tools

- To facilitate deployment in cloud-type environments, such as IBM Support Assistant 5.0

IBM Support Assistant Workbench 4.1

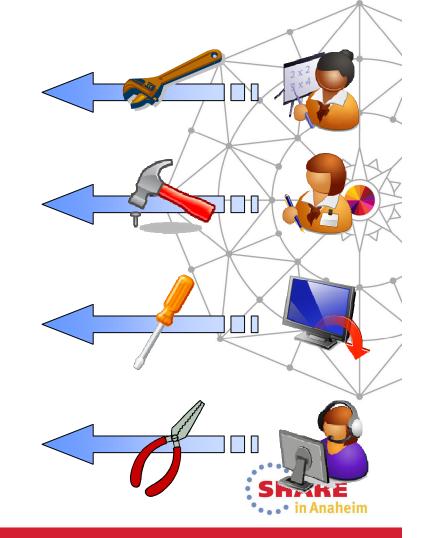

Specialized tool sources

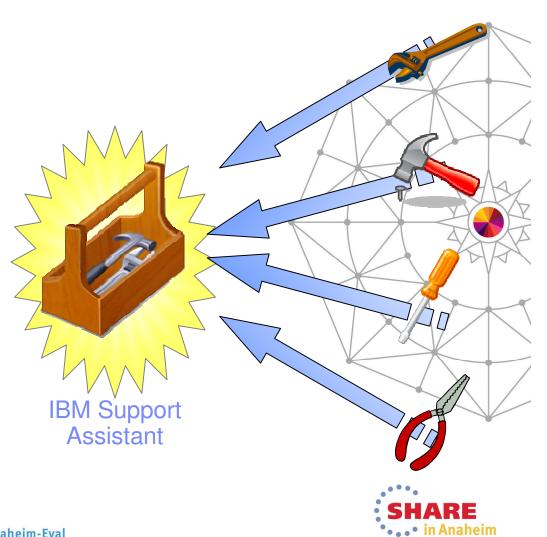

IBM Support Assistant – One-stop toolbox

Today – IBM Support Assistant (ISA) Workbench

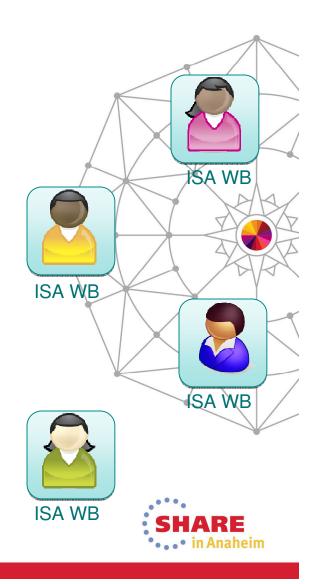

ISA Workbench 4.1

- Eclipse-based client
- •Workbench is installed on each desktop (single user)
- •Collect and organize diagnostic data (logs, traces, etc.)
- •Find and use Problem Determination tools
- •Search and browse support-related information about IBM products
- •Open and manage PMRs (phasing out)

IBM Support Assistant Workbench 4.1

Desktop serviceability application

Provides you with the function and tools to analyze and diagnose your software problems

Over one hundred "add-ons" available for various IBM products

Tailored for your needs

IBM Support Assistant 5

IBM Support Assistant 5

What is IBM Support Assistant 5?

- Application targeted toward users responsible for diagnostics and root cause analysis
- A long-range strategy to produce a collaborative problem determination platform
- A convergence and next generation of several tools

Benefit Focus areas

- Cost avoidance through reduction in time to resolution and PMR avoidance
- Saves time installing/updating client software: click "refresh" to get the latest version
- Saves time, ensures completeness and consistency when trudging through large volumes of diagnostic data to find that "needle in a haystack"
- Saves desktop resources by off-loading heavyweight tools to shared servers
- Saves time communicating with customers and collaborating between Support Engineers

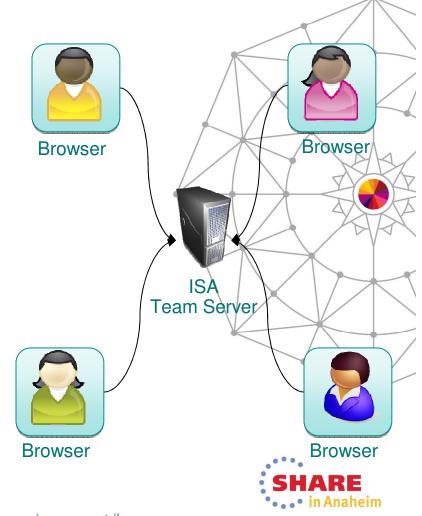

IBM Support Assistant 5 Strategy

ISA 5.0 Team Server

- Server-based model
- Install once shared by many team members via browser
- •Web 2.0 browser interface
- Remote execution of PD tools
- •Off-load analysis processing
- Collaboration on PD
- Case Management
- Tool Management
- •Single-user option available

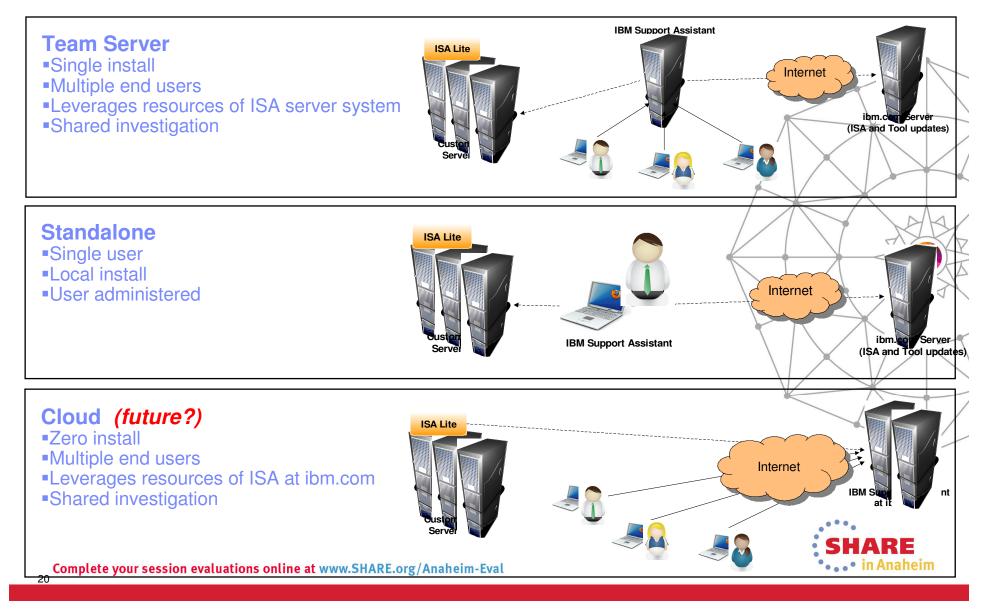

Complete your session evaluations online at www.SHARE.org/Anaheim-Eval

ISA 5 - Tools

Tooling Platform – Reports View

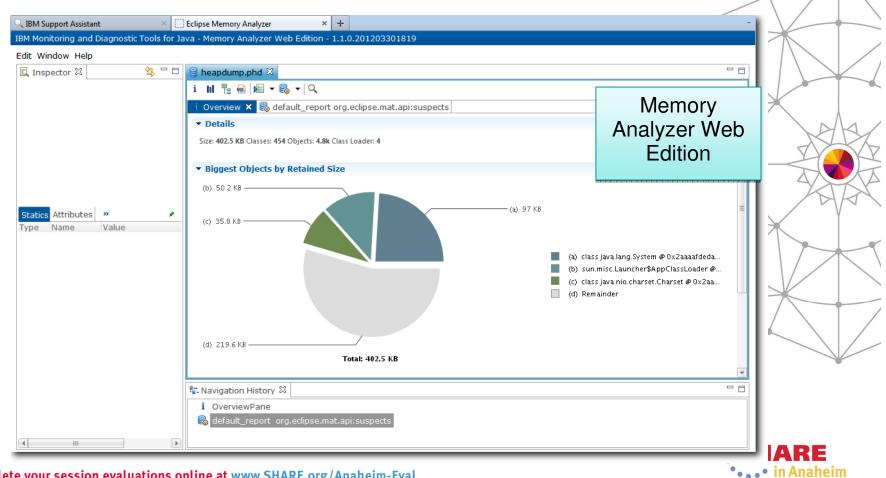

27

🗖 1 Anaheim

Web-based Tool Support

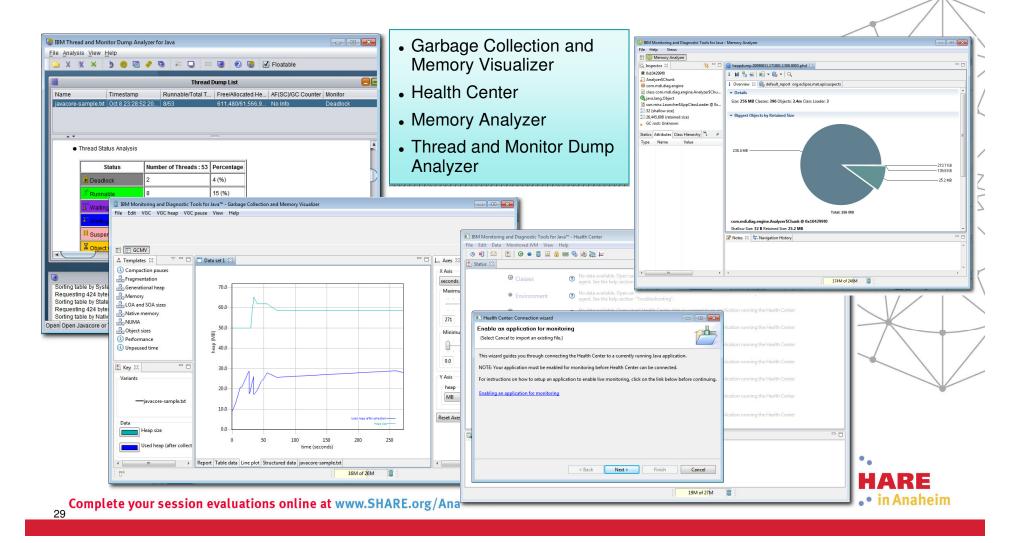

Tool processing runs on the server and the rich, interactive UI runs in the browser

Desktop Tool Support

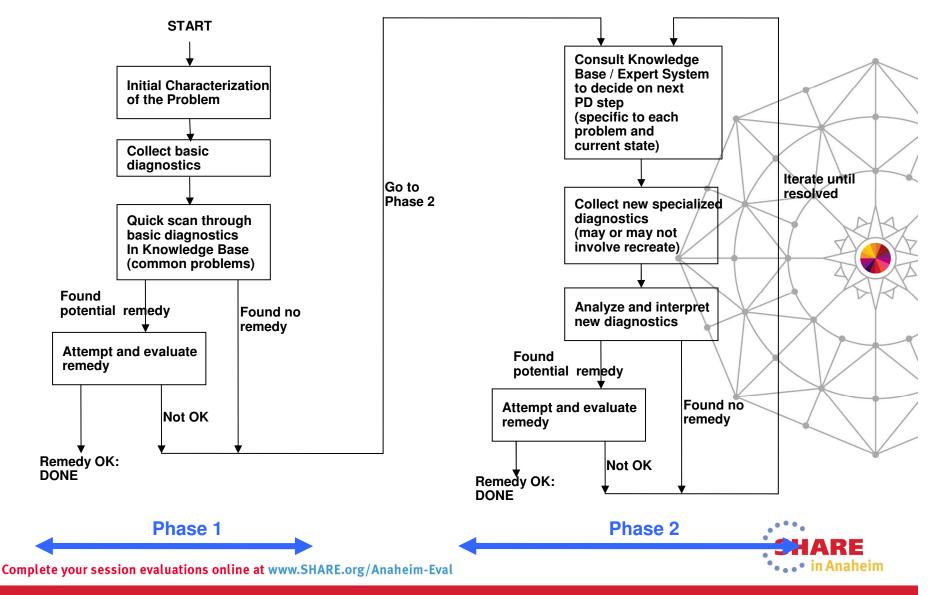

Client tools can be launched directly from the browser in IBM Support Assistant through Java WebStart

"Solve a Problem" Flow – Big picture

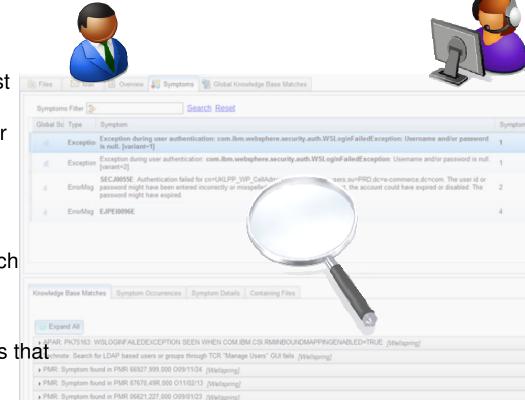

30

Automated Analysis (phase 1)

- Common tasks performed during a "first look"
 - Scan logs and other files looking for anomalies – "What stands out?"
 - Mentally rank symptoms
 - Use keywords to search known repositories
 - Review search hits and decide which seem "most likely"
- IBM Support Assistant automates steps that would probably be done by hand
 - Faster
 - More thorough
- Simplify the process of getting to root cause

Enhanced Files View

Education

- Many problems can be resolved or avoided by ensuring that the Users have the opportunity to learn the appropriate skills
- But Education is hard to deliver efficiently who has time to go through thousands of hours of education materials on every subject that can possibly be useful to them

Hence we need a rich a flexible set of education channels to suit each User's needs

 Education is necessary both for a general range of topics about how to use various aspects of each product, but also specifically about how to perform Problem Determination tasks

Tools and Resources		
Items	Notes	
WebSphere Education Services		
IBM Education Assistant (IEA)	Online, easy-to-consume, smal common questions and probler Available for free.	I granular education materials on ns encountered by Customers.
	Some of the contents of the Wa above are also available in IEA	AS Problem Determination course for self-study.
	Accessible directly through the tool in ISA (allows offline viewir	web, or through the <i>Media Viewer</i>

WebSphere Support Technical Exchange

IBM developerWorks

Support Authority column on developerWorks

Ongoing series of webcasts on topics of interest for WebSphere Support

Ongoing series of articles on all technical topics, published through the web

Semi-monthly column on topics of interest for WebSphere Support

Published as part of the WebSphere Technical Journal

IBM Redbooks

Extensive collection of books and papers, written by IBM experts

Reference Information

Toolo and Dessuress (continued)

 The investigation of most problems involves finding the appropriate information in a global knowledge base containing instructions about how to troubleshoot each specific problem, and entries about specific known issues and APARs

Tools and Resources (continued)	
Items	Notes
Search engine on the eSupport web sites/portal	Searches through a broad range of online resources, including Information Centers, Technotes, APAR database, developerWorks, Redbooks, forums, Results can be filtered by type and product, and organized in tabs for different types of results.
Product Information Centers	The primary reference documentation for each product.
	Most Information Centers contain a section on troubleshooting tools and techniques for the associated product.
	Searchable directly or through the eSupport web sites/portal or through ISA.
Technotes and related documents	Collection of notes on known issues, APARs, troubleshooting tips, how-to's. Stored in association with each product's eSupport web site/portal
	Managed by the IBM Support Engineers and Knowledge Engineers.
	Most products have a special collection of Technotes with instructions on how to troubleshoot each type of problem: <i>MustGather</i> and <i>Troubleshooting Documents</i> .
Diagnostic Guides	Some products (e.g. IBM Java) have a special <i>Diagnostic Guide</i> document, or other forms of troubleshooting guides. SHARE

Operational Preparation

- Preparation is at least 50% of the battle: define, review and enhance a complete set of procedures to follow and associated resources to use to facilitate problem determination.
- Focus initially on how to best take advantage of the existing tools and techniques, and how to be as efficient as possible in problem determination.
- Several published articles can be used as a starting point for this activity:

Operational Preparation

•••• in Anaheim

Special Activities (continued)	Technology - Connections - Results
Items	Notes
Prepare a detailed Architecture Diagram	Used to identify key monitoring and diagnostic points, to communicate effectively during troubleshooting, and to help identify unexpected changes in configuration.
Prepare a Diagnostic Data Collection Plan	To avoid loss of time and loss of information when a problem does occur.
	Take advantage of automated data collection facilities in ISA.
Prepare a Monitoring Plan	To effectively detect problems as soon as they occurs, or preferably while they are still emerging
Prepare a Relief and Recovery Plan	For mission-critical systems, to minimize down-time when a problem occurs
Prepare a Maintenance Plan	To minimize disruptions and problems due to delayed or improper maintenance
Collect baselines of all major diagnostic data	To compare when a problem occurs and detect anomalies.
sources	May be part of a regular practice to perform <i>health checks</i> .
Document the most likely failure scenarios and the diagnostic collection and analysis procedure for each	To ensure that the necessary diagnostic resources (including tools and knowledge) are ready before they are needed
Maintain a Change Log of all significant changes	To prevent or help diagnose newly-emerged problems.
in the environment	Perform regular checks to ensure the change log remains

Complete your session evaluations online at www.SHARE.org/Anaheim-Eval

Collecting Diagnostic Data

- Most troubleshooting scenarios consist of one or more iterations of collecting diagnostic data from a failed system then analyzing that data
- IBM Support has formalized this process and the set of diagnostic data to be collected for each of many types of problems that occur with each product
- The standardized set of collected diagnostic data is an important part of the exchange of information when working with IBM Support to resolve a PMR, and also when using the procedures and tools developed by IBM Support in a self-help situation at the Client's site

Tools and Resources

Items	Notes
MustGather documents	A collection of special Technotes, each describing the exact set of diagnostics to collect for one particular problem type in one particular product.
ISA Lite / ISA Data Collector – downloadable edition	An alternative for using the same automated data collections scripts provided with ISA 4.1, but without requiring the installation of an agent on each remote system. The user must run the ISA DC tool manually on each target system.
ISA Data Collector – Web-enabled edition (New)	Similar to the downloadable ISA Lite, but run directly as an applet from a browser, without explicit download and installation. Available in ISA 5.0 and directly from the ISA web page on
	ibm.com/support/isa
ISA Data Collectors bundled with products (New)	More and more, the ISA DC or other sophisticated data collectors are bundled with the individual products to which they apply
	(for example in <was-install>/bin/isadc.bat or isadc.sh</was-install>

Collecting Diagnostic Data

Tools and Resources (continued)

Items	Notes
Automated data collection function in ISA 4.1 (<i>Phasing out</i>)	ISA includes a collection of collection scripts that correspond to many of the most common MustGathers for each product
	Each script performs all the necessary actions with minimal user intervention, and packages the result as a jar file that can be sent directly to IBM Support, or analyzed locally.
	The ISA workbench can connect to an agent on each system in the Client's environment to collect the date from a remote system.
ECuRep file repository	A special repository hosted by IBM, to which Clients upload their diagnostic artifacts in connection with a PMR (normally via FTP)
	IBM Support has special tools to facilitate the management and analysis of artifacts on this repository.
Case Manager function in ISA	A function in ISA to help keep track and manage the various diagnostic artifacts collected during a troubleshooting sessions.
	Includes the capability to easily examine the contents of collection archive files created by the automated data collection facilities.
IBM Java Diagnostic Collector Tool	A special utility that can be installed with a IBM JDK to facilitate the generation and collection of diagnostics when that JDK crashes.

Collecting Diagnostic Data

Special Activities Items Notes Create specialized collection scripts customized for the Client's environment Image: Client's environment

High-level log analysis and "Phase 1 Problem Determination"

- A very substantial fraction of all problems encountered by Customers are relatively readily identifiable by examining logs and recognizing a key symptom in a database of known problems
- We have defined a process called "Phase 1 PD" to take advantage of this situation

Runtime Features		
Items	Notes

Working with Java and WebSphere Trace

Tools and Resources	
Items	Notes
Cross Component Trace Viewer (XCT) (New)	Viewer for cross-component trace (XCT)
IBM Trace and Request Analyzer	Specialized tool for analysis of delays in request processing
IBM Database Connection Pool Analyzer	Specialized tool for analysis of problems related to the WebSphere connection pool
Trace Analyzer for WebSphere Application Server	General-purpose tool to facilitate sophisticated trace analysis by experts
Server Logs Viewer in WebSphere Integration Developer	Currently used for WPS only. Viewer for cross-component trace (XCT)
Special Activities	
Items	Notes
Document the process for diagnosing common problems in the Client's environment from examination of traces	Collect baseline traces during normal operation for comparison
Write specialized trace analysis scripts for common problems	
Complete your session evaluations online at www.SHARE.org/Ana	heim-Eval

Working with Java and WebSphere Dumps

- Dump analysis is complementary to trace analysis; it focuses on taking a snapshot of the state of system, and trying to determine if anything is abnormal and how we got to that state.
- There are many different types of "dumps", with varying degrees of completeness and cost

Runtime Features	
Items	Notes
Javacore / thread dumps	Most common JVM artifact; simple text file with most commonly-used information. No detailed information about individual objects.
Heap dumps	Special dump used to diagnose memory conditions; smaller than system dump but less complete information
System dumps / svcdump	Most expensive but most comprehensive dump; an effort is underway to standardize on this type of dump for most cases.
Diagnostic Tooling Framework for Java (DTFJ)	Runtime support and API for producing and analyzing system dumps from a JVM
WebSphere Diagnostic Providers (<i>Phasing out)</i>	Provides specialized dumps, tests of individual components

Working with Java and WebSphere Dumps

53

Tools and Resources	
Items	Notes
IBM Thread and Monitor Dump Analyzer (TMDA)	Analyzes javacores/thread dumps
Memory Analyzer (MA or MAT)	Expert tool for analyzing heap dumps and system dumps, with special focus on issues related to memory usage
Heap Analyzer (HA)	Analyzes heap dumps, with strong heuristics for memory leaks
Interactive Diagnostic Data Explorer (IDDE) (New)	Expert tool for analyzing system dumps; lighter-weight and more extensible than Memory Analyzer
Dump Analyzer (DA) <i>(Phasing out)</i>	Analyzes system dumps; extensible collection of analysis modules to diagnose different problems.
WebSphere Application Server modules for Dump Analyzer, Memory Analyzer and/or IDDE (New)	Specialized modules to examine WSAS-level information
IBM Whole-system Analysis of Idle Time Tool (WAIT) (New)	Cloud-based tool for analyzing a sequence of javacores, with special emphasis on performance issues
Memory Dump Diagnostic for Java (MDD4J) / Yeti (Phasing out)	Analyzes heap dumps; positioned as tool for non-experts.
Special Activities	
Items	Notes
Promote and organize the systematic collection of dumps during incidents	
Implement specialized modules for Memory Analyzer or IDDE for the Client's environment Complete your session evaluations online at www.SHARE.org/Analyzer	neim-Eval

Working with WebSphere Performance Sensors

 Performance sensors are not typically thought of for problem determination, but they can be used to detect various anomalies that are important clues for diagnostics

Runtime Features	
Items	Notes
Performance Monitoring Infrastructure (PMI)	Many sensors/counters for key performance indicators
Advanced Request Metrics	Allows fine-grained tracing of the progress of a transaction
WebSphere Runtime Performance Advisor	Dynamically monitors PMI metrics and warns of anomalies
Tools and Resources	
Items	Notes
Items Tivoli Performance Viewer	Notes Basic viewer for PMI data
	Basic viewer for PMI data
Tivoli Performance Viewer	Basic viewer for PMI data Embedded in the WebSphere Admin Console Advanced viewer for PMI data; can perform live monitoring and

Working with WebSphere Performance Sensors

Special Activities		
Items	Notes	
Collect baselines and review PMI sensors during normal operation, to help recognize common problems		

Using "pings" for Monitoring and Diagnostics

- Most troubleshooting techniques are based on observing and extracting information that already exists in the system as part of its normal (or abnormal) operation.
- Another technique, which is used relatively rarely but which can be extremely powerful, consists of actively exercising parts of the system with known inputs to observe the resulting outputs.
- For example, by injecting artificial requests at regular intervals, whose processing is completely
 predictable if the system is healthy. By observing how the actual processing of these requests happens,
 we can learn a lot about what is going on in the system.
- By carefully choosing different requests that each exercise only a portion of the overall system, we can
 also identify which portions of the system are currently healthy or un-healthy.

Runtime Features	
Items	Notes
Advanced Request Metrics	Use primarily for performance, but can also be used in some cases for "ping" style health checks
Tools and Resources	
Items	Notes
Tivoli tooling	Tivoli has a collection of tools that monitor systems through synthetic transactions
Ad-hoc scripts	Often, Clients implement their own ad-hoc "ping" scripts based on specific understanding of their particular system architecture
Complete your session evaluations online at www.SHARE.org/Ana	aheim-Eval ••••• in Anaheim

Using "pings" for Monitoring and Diagnostics

Special Activities		
Items	Notes	
Design and implement a collection of ad-hoc "ping" scripts for the Client's environment		

Specialized runtime features for common problems

- The WebSphere runtime is steadily being enhanced to include special diagnostics for common problems
- This type of feature makes is most easy to detect a particular problem, but they typically can only be implemented with new product releases, i.e. on a relatively long cycle

Runtime Features Items Notes Simple function in the WebSphere Admin Console to test that Database connection test function a database connection is currently working Hung Thread Detection Notifies when threads have been unresponsive Notifies when database connections are "leaked" Connection Leak Detection Runtime checks that warns when it appears that information Session data crossover detection is unintentionally "leaking" between two HTTP sessions First Failure Data Capture (FFDC) Captures information for all unexpected exceptions Captures information about how classes are loaded in Classloader Viewer **WebSphere** Viewer is embedded in the WebSphere Admin Console Memory leak detection and protection (New) Detect/fix common causes of leaks associated with app stop ... others ...
