

CICS Project Opening and Project Update

Andy Bates

CICS Transaction Server Product Manager

batesan@uk.ibm.com

The world as we know it doesn't exist without Systems of Record

*CICS: Trusted by 1000s of customer in 23 industries, spanning 75 countries
90% of the Global Fortune 100 Banking and Financial Services use CICS*

Even though the world is awash in unstructured data, it's the **transactional data** that decision makers are focused on right now. And since the mainframe holds the vast majority of that data, **it has a real role to play.**

80%

of world's corporate data resides or originates on mainframes

IBM CICS Transaction Server V5

enterprise grade mixed language application serving

Service Agility

Runtime support for production ready web applications.

Integration with mobile applications.

Operational Efficiency

Increased system capacity and capability to achieve more with less.

Automatic control of critical resources using policies.

Cloud Enablement

Simplified system management and rapid application deployment.

On premise pattern based cloud deployment.

Monday

11:15 AM-12:15 PM

V5.2

15564: CICS TS V5.1 Technical Overview

Speaker: Steve Zemblowski

Project: CICS

Room 315 (David L. Lawrence Convention Center)

SHARE is an independent volunteer-run information technology association that provides education, professional networking and industry influence.

IBM CICS Transaction Server V5.2

Announced, 7th April 2014 | GA, 13th June 2014

Service Agility

Integrates mobile capabilities and broadens the web programming model

without requiring additional middleware

Operational Efficiency

Support distributed security standards and automatically safeguard critical runtime resources

without requiring additional system code

Cloud Enablement

Deploy and manage several versions of a multi-program application and run them concurrently

without requiring additional regions

+ Continuous enhancements to the solid foundation

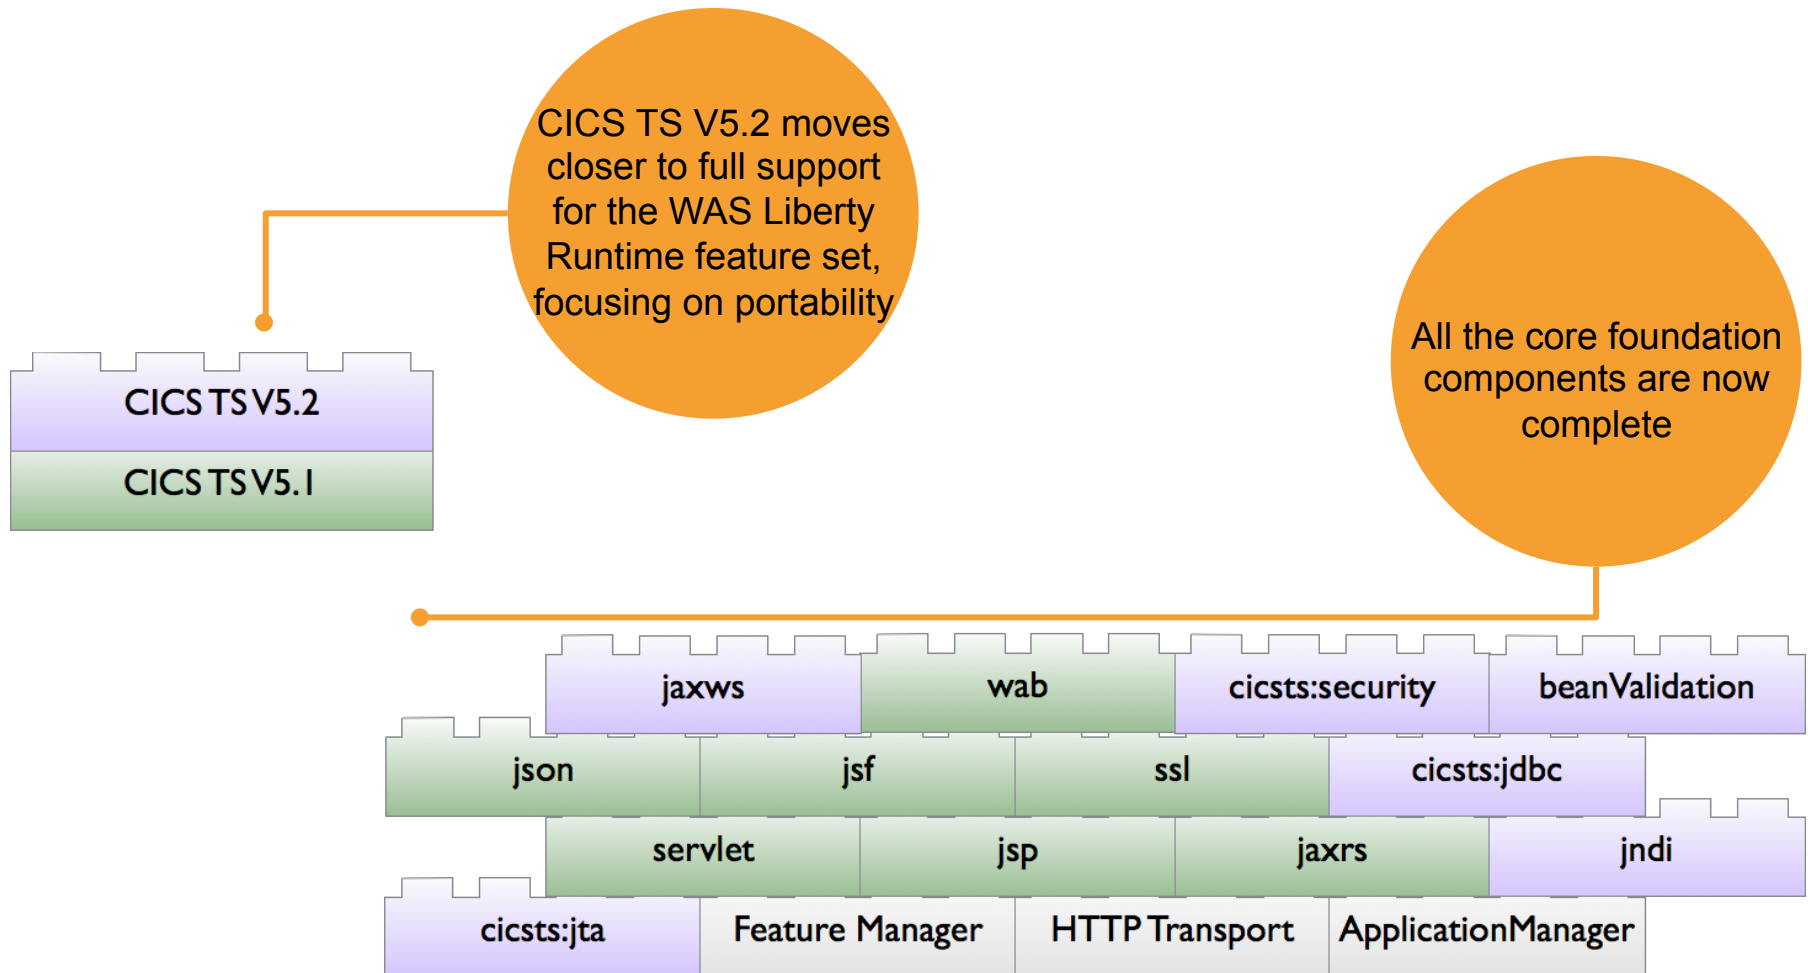

Complete your session evaluations online at www.SHARE.org/Pittsburgh-Eval

Service Agility

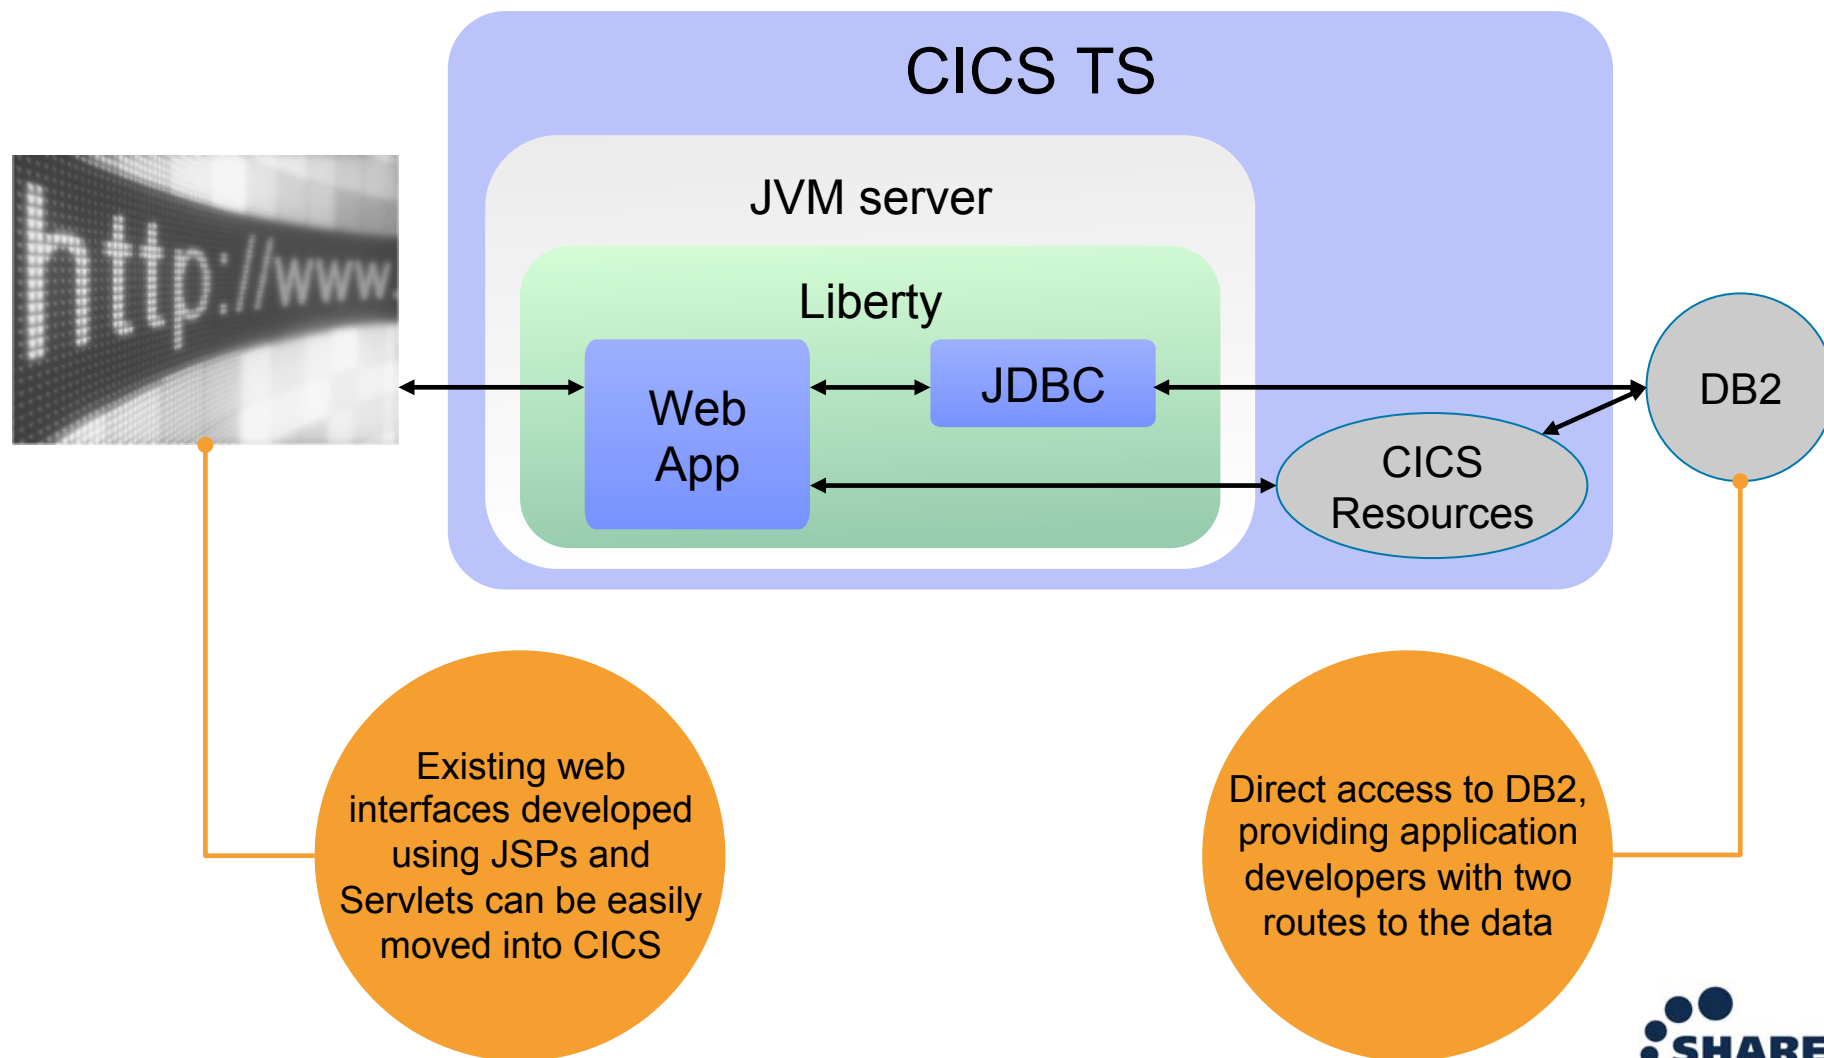

Integrates mobile capabilities and broadens the web programming model, *without requiring additional middleware*

WebSphere Application Server Liberty Profile within CICS TS V5.2

Liberty Web Apps in CICS TS V5.2

Liberty scenario

Move JSP or Servlet presentation code into CICS Transaction Server

```

protected void doGet(HttpServletRequest request, HttpServletResponse response) {
    // obtain the WHERE clause and connection type from the request
    String whereClause = request.getParameter("whereClause");
    String connectionType = request.getParameter("connectionType");

    // set the response contentType and character encoding
    response.setContentType("text/xml");
    response.setCharacterEncoding("ASCII");

    // Cache the Response output stream
    ServletOutputStream out = response.getOutputStream();

    // begin writing XML to the response output stream
    StringBuilder xml = new StringBuilder();

    // Create a DB2 sample with DB2 connection
    CICSDB2DynamicSQLExample db2Sample = null;
    try {
        db2Sample = new CICSDB2DynamicSQLExample(connectionType);
    } catch (Exception e) {
    }
}

```

Step 1

Modify application data logic to make JCICS API calls or direct JDBC calls, if required

Step 2

Package application into a EBA for deployment into CICS Liberty

Step 3

Install CICS application into CICS Liberty Server and enable using the CICS Explorer

Monday

1:30 PM-2:30 PM

15563: Web Apps using Liberty Profile Technology in CICS

Speaker: Ian Mitchell, IBM

Project: CICS

Room 315 (David L. Lawrence Convention Center)

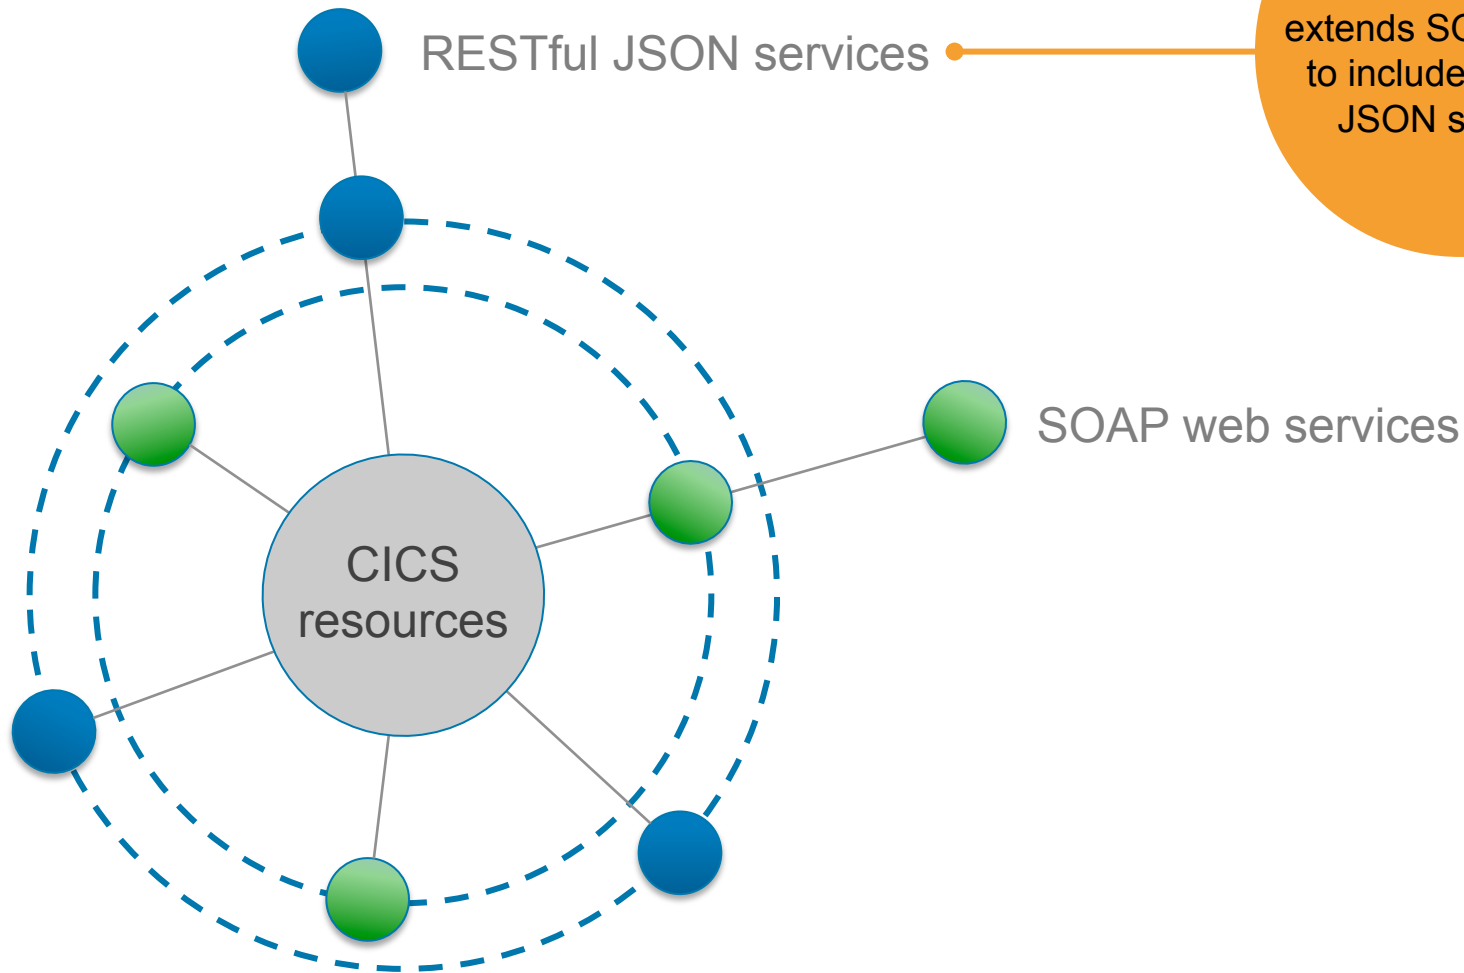

SHARE is an independent volunteer-run information technology association that provides **education, professional networking and industry influence.**

Copyright (c) 2014 by SHARE Inc.  Except where otherwise noted, this work is licensed under <http://creativecommons.org/licenses/by-nc-sa/3.0/>

RESTful APIs and JSON parsing

Mobile scenario

Connect directly to CICS from Worklight using end-to-end JSON

```
file:///C:/Users/andrew/AndroidStudioProjects/req/req.json 11
{
  "schema": "http://schemas.xmlsoap.org/wsdl/2003/06/schematarget",
  "description": "Request schema for the SIMMS2 JSSE interface",
  "type": "request",
  "properties": {
    "SIMMS2operation": {
      "type": "object",
      "properties": {
        "method": {
          "type": "object",
          "properties": {
            "method": {
              "type": "string",
              "value": "getCustomerDetails"
            }
          }
        }
      }
    }
  }
}
```

```
function getCustomerDetails(custNum) {
  var pathURL = "GENAPP/getCustomerDetails";
  var request=
  {
    "LGICUS010operation":{
      "ca": {
        "ca_request_id" : "01ICUS",
        "ca_return_code" : "00",
        "ca_customer_num" : custNum,
        "ca_num_policies" : ""
      }
    }
  }
};
```

Step 1

DFHLS2JS to generate the JSON artefacts for the target CICS service.

Step 2

Mobile developer uses JSON schema to build a Worklight adapter.

Step 3

Frontend mobile developer calls the Worklight adapter which calls the service hosted in CICS.

25 years of continuous operation
On CICS®, DB2®, and System z®

Mobile

“*Mobile banking* is a fast growing channel for Halkbank. As for all other channels, *we run the transactions themselves on our CICS and DB2 for z/OS systems*, which helps *to ensure the highest levels of performance, availability and security*”

Ayhan Yalkut, System z Manager, Halkbank.

Scalable

The Turkish state pays most of the government salaries through the bank, causing a **once-monthly peak in daily transactions, increasing from 25m to 50m**

Reliable

“**In more than 25 years of continuous operations, we have never had any unplanned downtime**”

“Core enterprise applications process transactions — lots of transactions — and so can’t be scaled by adding load balancers and spawning new copies of services. They scale by adding capacity to the transaction processing engine”

Complete your session evaluations online at www.SHARE.org/Pittsburgh-Eval

*Trusted platform for new mobile workload
On CICS[®], DB2[®], and System z[®]*

Trusted

“Trust is crucial, so whenever we launch new services, the challenge is always to ensure that the underlying data and transactions are secure and reliable. We needed a robust and trustworthy platform for our new analytics and mobile capabilities”

Daniele Cericola, ICT Governance Manager at Banca Carige.

Integrated

Banca Carige’s new mobile application runs in the cloud, it hooks back into web services running on the zEnterprise. Mobile transactions are processed through CICS and DB2 on the mainframe.

Secure

“availability and security are business-critical; the fact that these are tried-and-tested features of the mainframe makes it our natural platform of choice for our new initiatives”

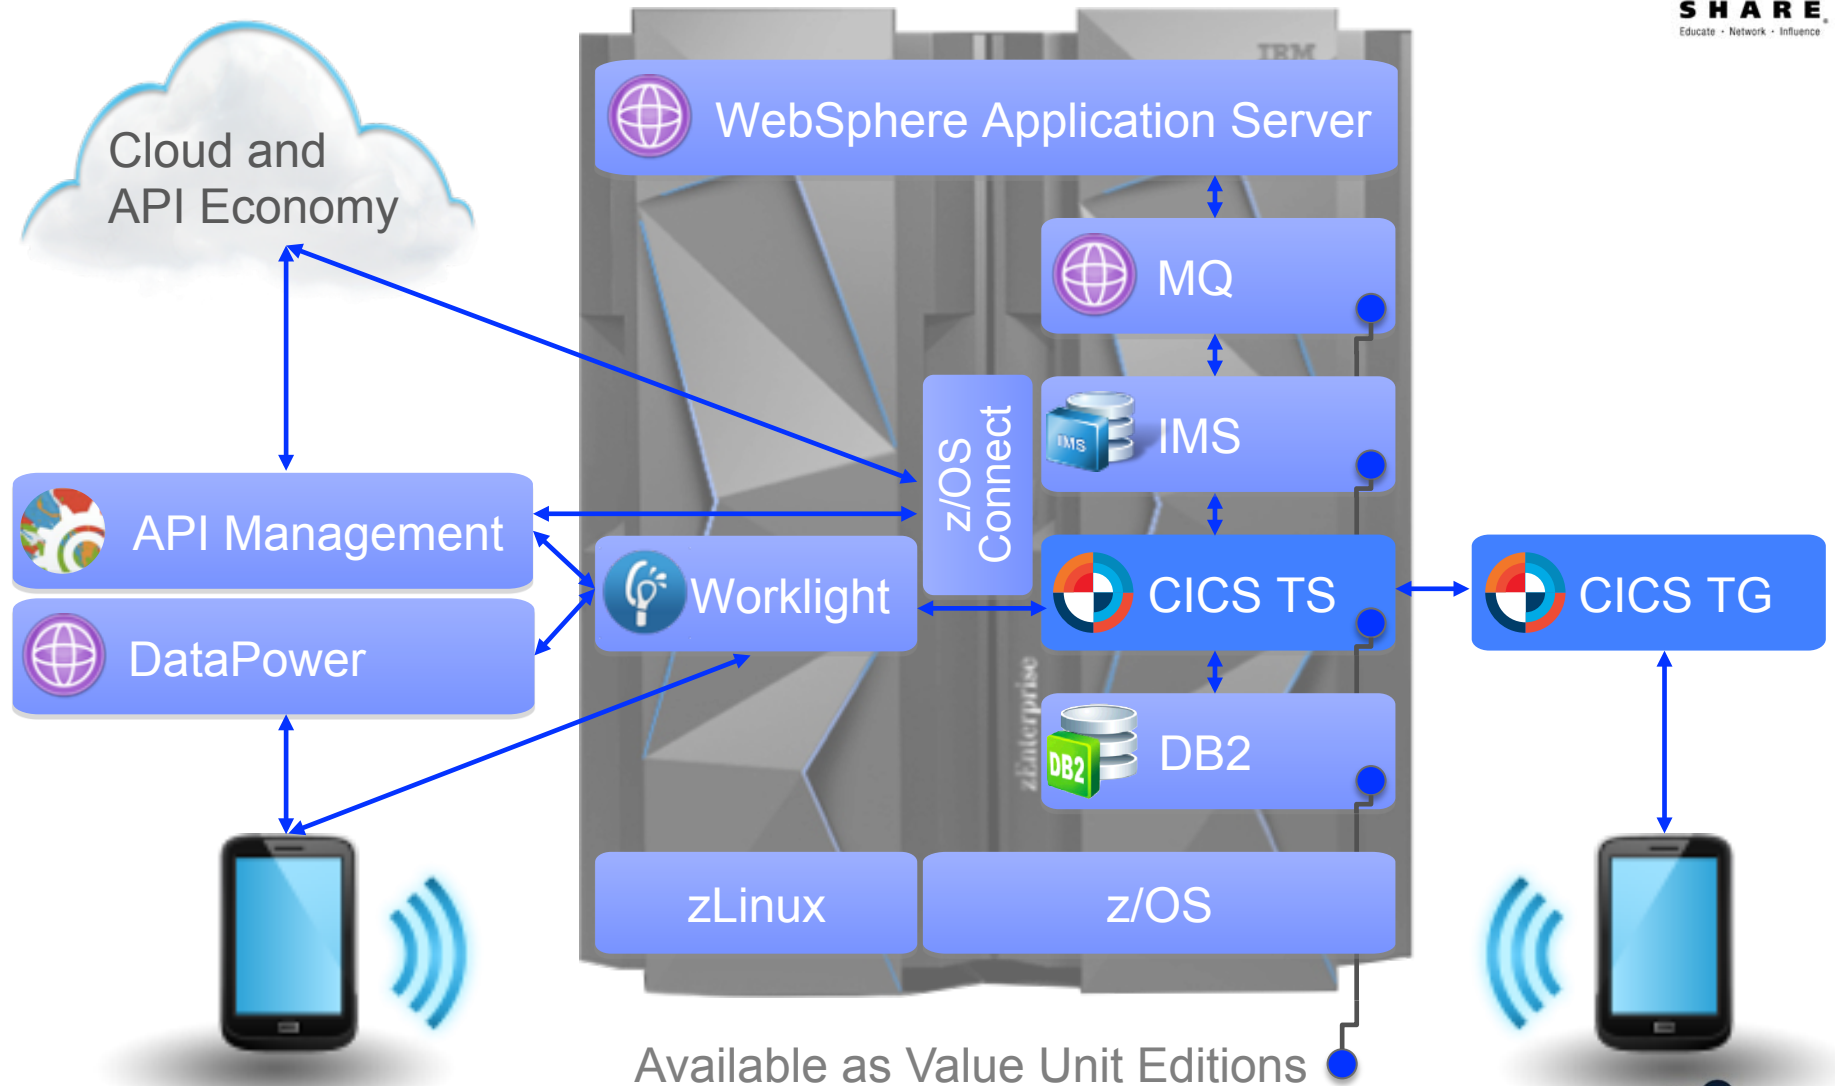

FORRESTER

“97% of executives surveyed said that information security is highly critical to their company’s ability to compete in their market or industry”

No submission of code required, only screenshots.
Entries must be complete and submitted by **17 Sept 2014**.

System z CICS Mobile Test Drive Program

- The CICS Mobile Test Drive provides Independent Software Vendors a remote System z environment for developing and testing mobile applications at no charge for up to 60 days.
- Develop or test a mobile app that interfaces with an IBM Worklight server and to access applications running under CICS TS V5 using the new JSON mobile features
- Participants in the program who are using Worklight Studio for their deployment may also be provided an instance of Linux running on System z.
- The systems are designed to provide a maximum amount of flexibility and authority. As such, system users assume the role of the System Administrator and Security Administrator.
- Questions regarding any aspect of the program can be emailed to ETPADMIN@us.ibm.com

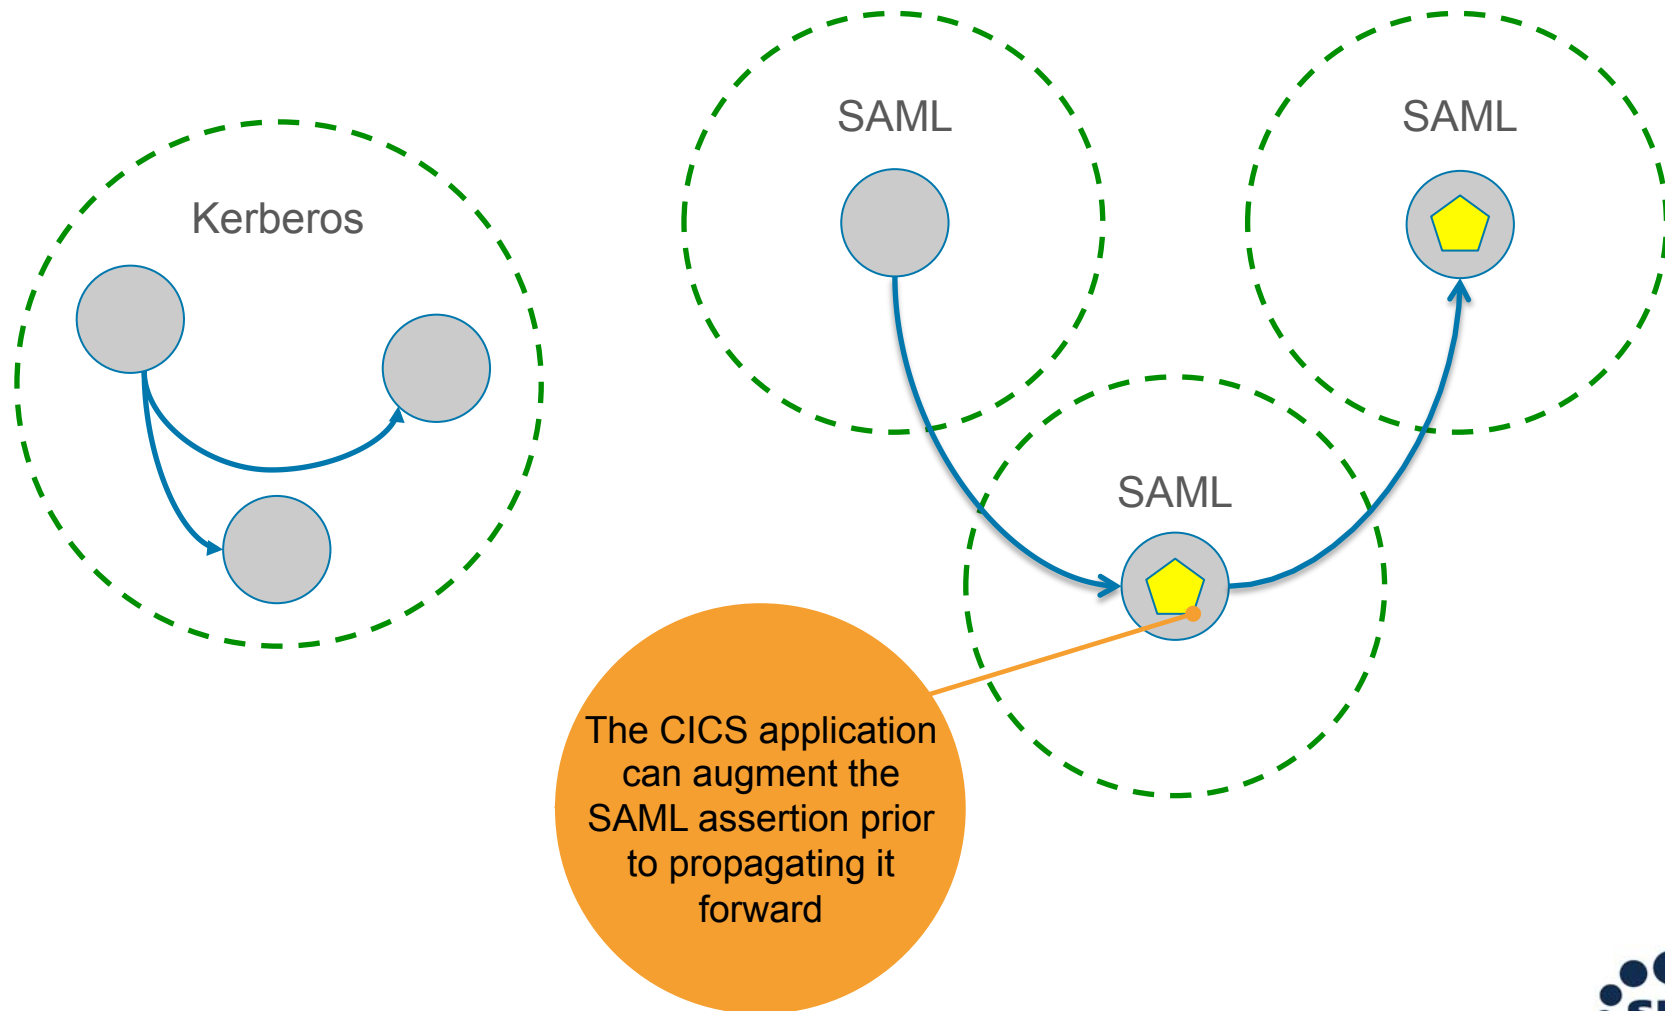

<http://dtsc.dfw.ibm.com/MVSDS/%27HTTPD2.ENROL.PUBLIC.SHTML%28MOBILE%29%27>

Operational Efficiency

Support distributed security standards and automatically safeguard critical runtime resources, ***without requiring additional system code***

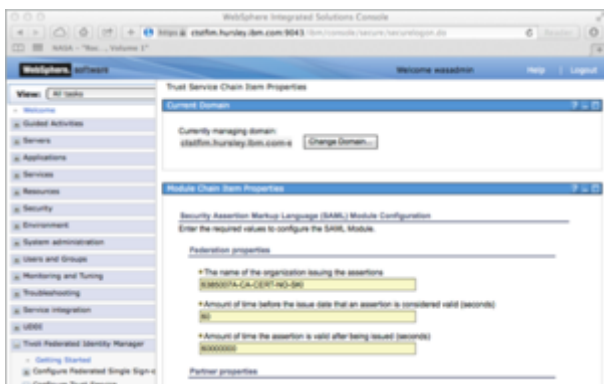

SAML and Kerberos security

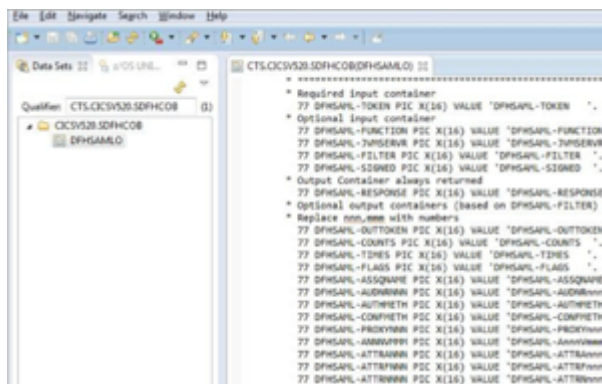

SAML Security scenario

A CICS application developer writes a COBOL program with behavior that's dependent on the SAML security token

Step 1

Client requests SAML assertion from Tivoli Federated Identity Manager or Datapower

Step 2

CICS COBOL application extracts SAML containers from DFHSAML channel

Step 3

The application can add additional attributes to the assertion for downstream components

Thursday

11:15 AM-12:15 PM

15551: CICS - Identity and Security

Double the number of policy triggers

<i>New V5.2 Triggers</i>	Cumulative Time	Syncpoint	Start	TSQ	TDQ
<i>CICS V5.1</i>	DB2 SQL	Files	Storage	CPU Time	Prog. Link

Double the number of policy triggers

New V5.2 Triggers

Cumulative Time	Syncpoint	Start	TSQ	TDQ
-----------------	-----------	-------	-----	-----

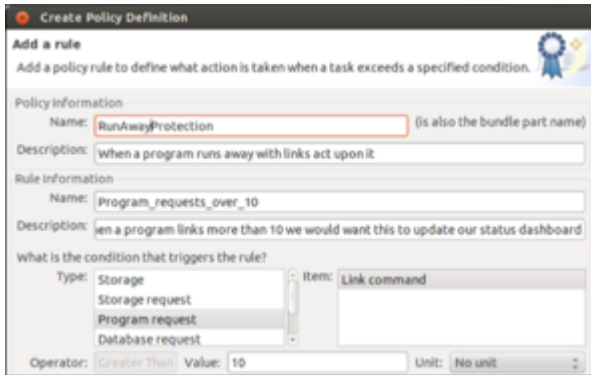

CICS V5.1

DB2 SQL	Files	Storage	CPU Time	Prog. Link
---------	-------	---------	----------	------------

Policy scenario

Define a policy to trigger an event when an application consumes too much total elapsed CPU time

Step 1

Define the policy thresholds and trigger action that CICS should take

Step 2

Associate the policy with the appropriate platform or application and deploy

Step 3

When the threshold is breached, CICS triggers an event, updating an operations dashboard

Complete your session evaluations online at www.SHARE.org/Pittsburgh-Eval

Thursday

15884: Using Policies to Manage Critical CICS Resources

Speaker: Matthew Webster

Project: CICS

Room 315 (David L. Lawrence Convention Center)

SHARE is an independent volunteer-run information technology association that provides **education, professional networking and industry influence.**

Copyright (c) 2014 by SHARE Inc.  Except where otherwise noted, this work is licensed under <http://creativecommons.org/licenses/by-nc-sa/3.0/>

Cloud Enablement

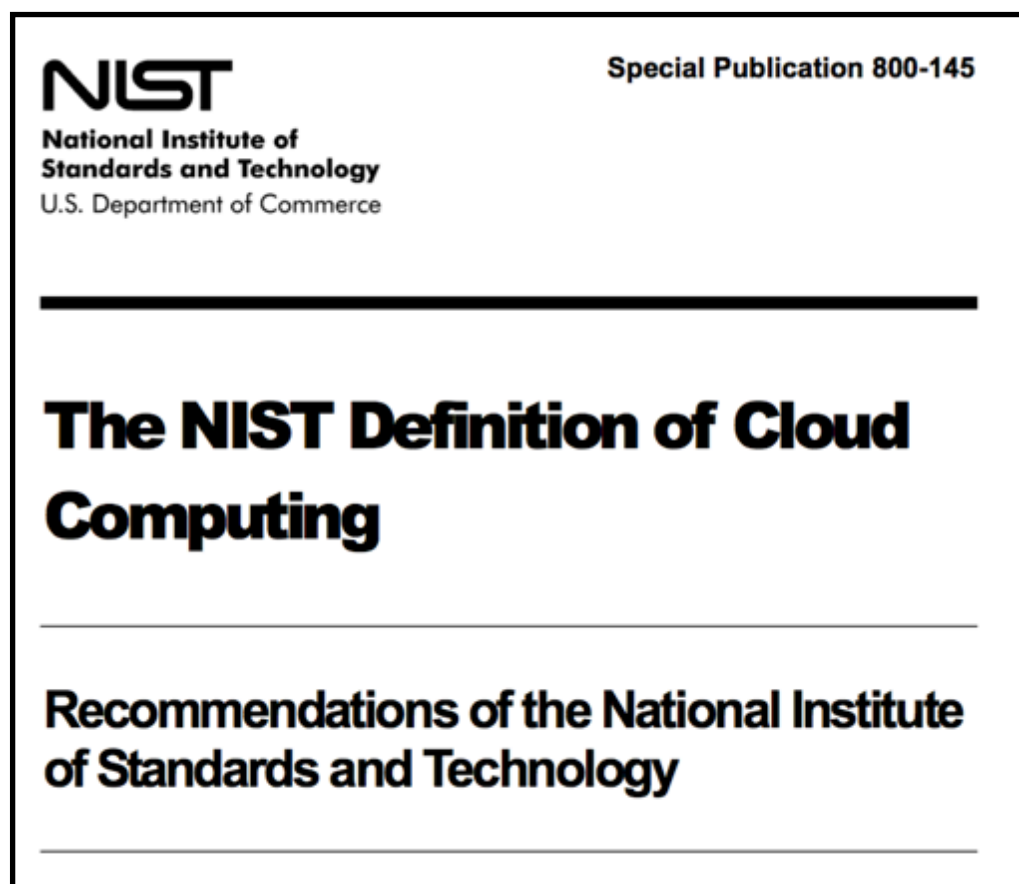

Deploy and manage several versions of a multi-program application and run them concurrently, ***without requiring additional regions***

What is a CICS Cloud?

- ▶ CICS implementation of cloud principles
'Pre-defined **application** architectures, and required **platform** services, that are deployed and managed by the system according to a set of **policies**.'
IBM PureSystems - Product Family overview homepage, Apr 2014
- ▶ Enabling creation of private CICS clouds
'The cloud infrastructure is provisioned for exclusive use by a **single organization** comprising **multiple consumers** (e.g., business units)'
NIST Special Publication 800-145, Sept 2011
- ▶ Bringing Cloud benefits to CICS
CICS TS V5 delivers a **pattern based, policy managed, private CICS cloud** environment, **improving the agility** of CICS application deployments whilst **reducing the risk** of implementation errors.

The Essential Characteristics of Cloud Computing

- On-demand self-service
- Broad network access
- Resource pooling
- Rapid elasticity
- Measured service

<http://www.nist.gov/itl/cloud/> or search 'NIST Cloud'

15855: Modernizing CICS for Cloud

Speaker: Matthew Webster

Project: CICS

Room 315 (David L. Lawrence Convention Center)

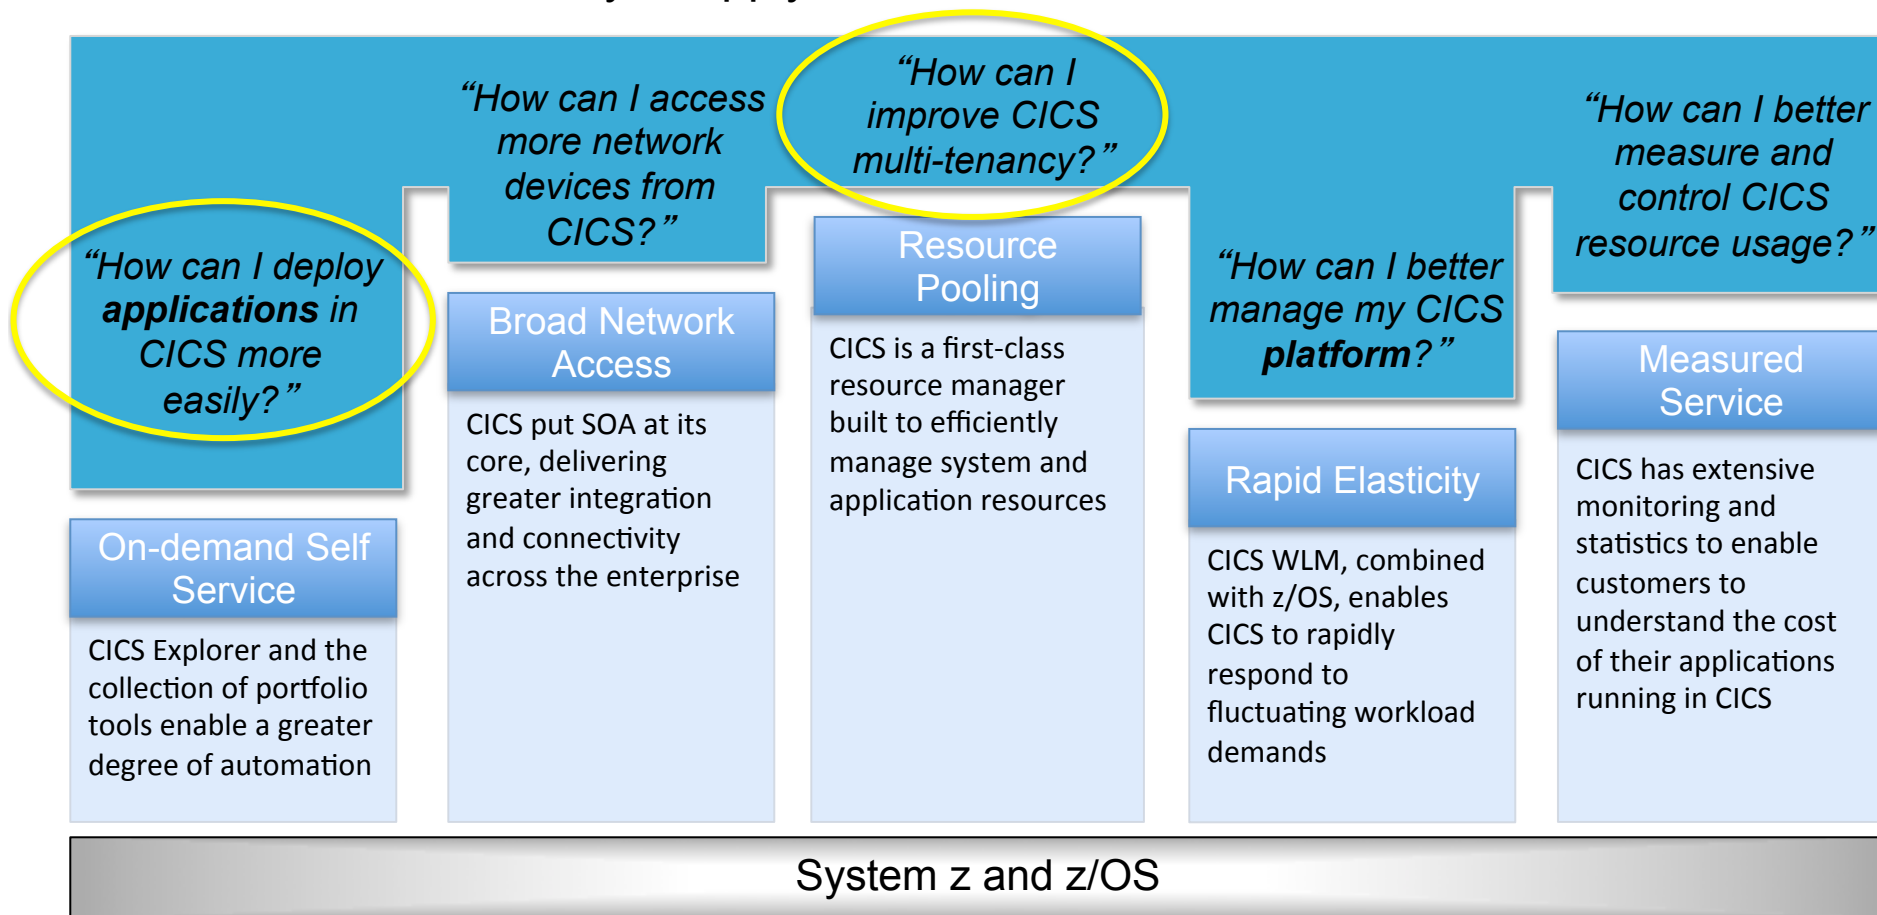

SHARE is an independent volunteer-run information technology association that provides **education, professional networking and industry influence.**

Copyright (c) 2014 by SHARE Inc.  Except where otherwise noted, this work is licensed under <http://creativecommons.org/licenses/by-nc-sa/3.0/>

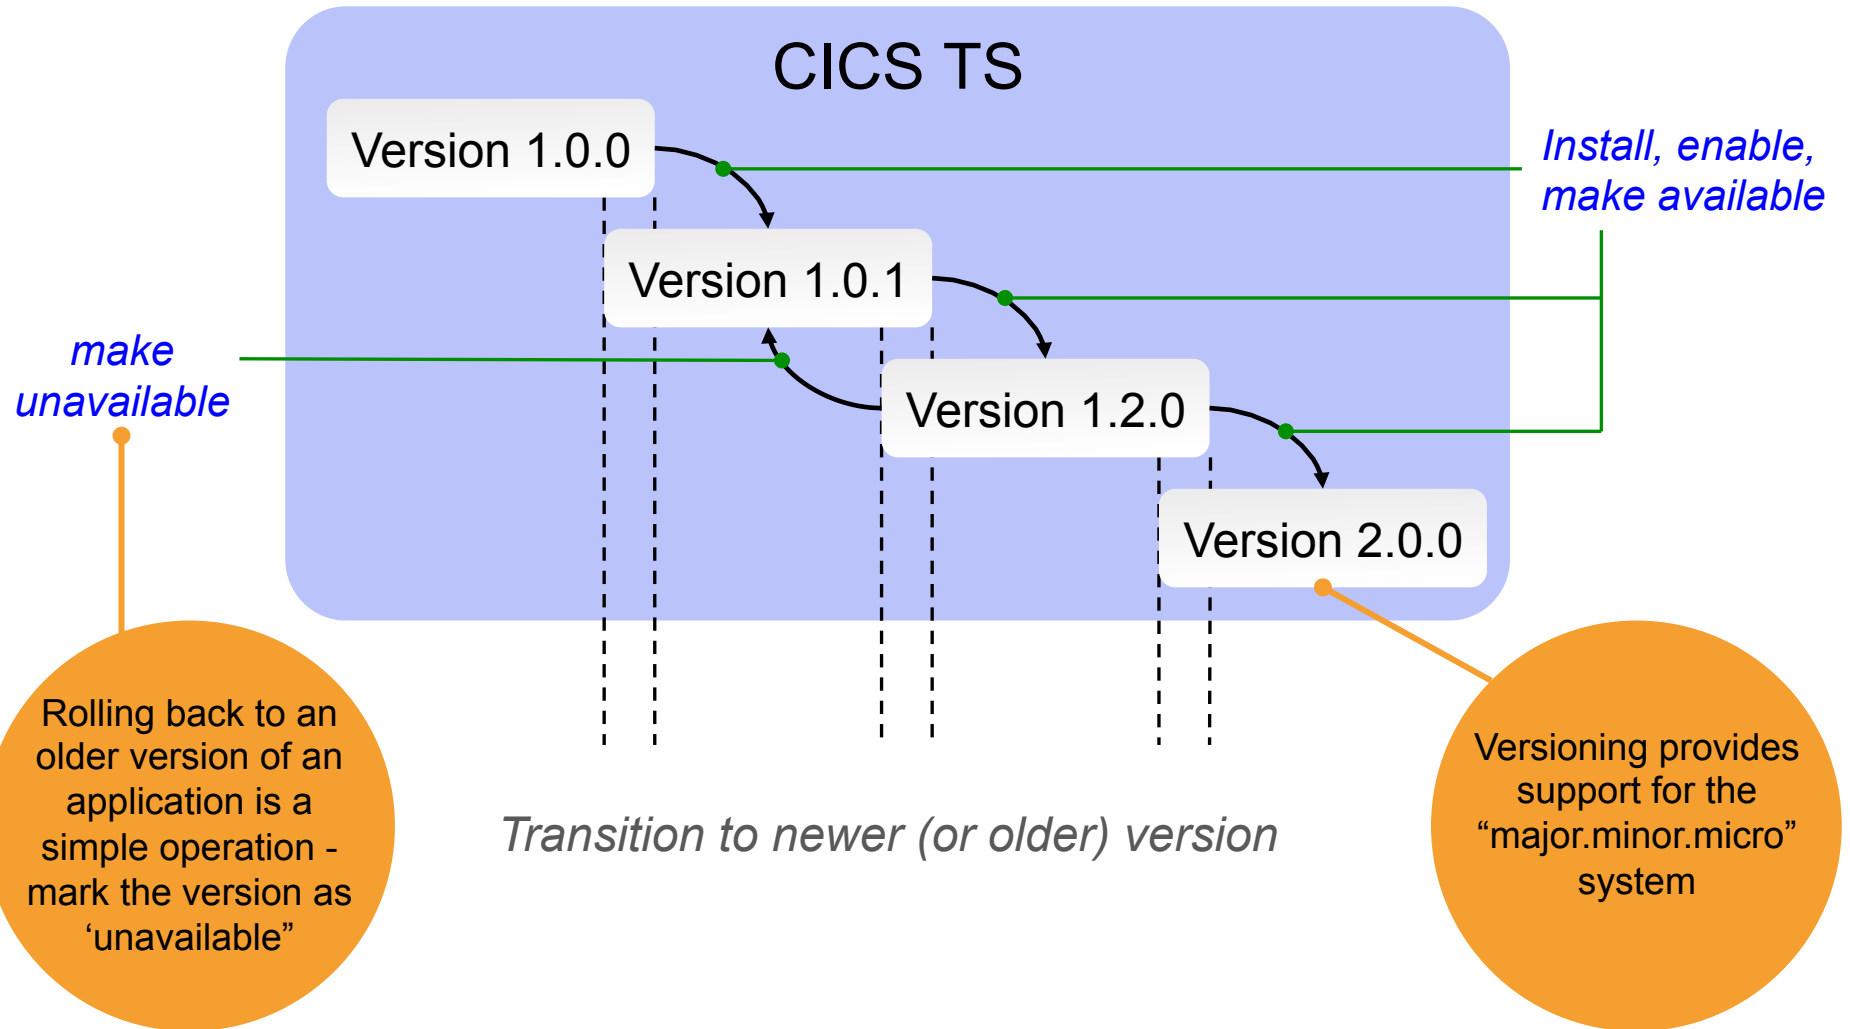

The Essential Characteristics of Cloud Computing

Question : How can you apply the 5 essential cloud characteristics to CICS?

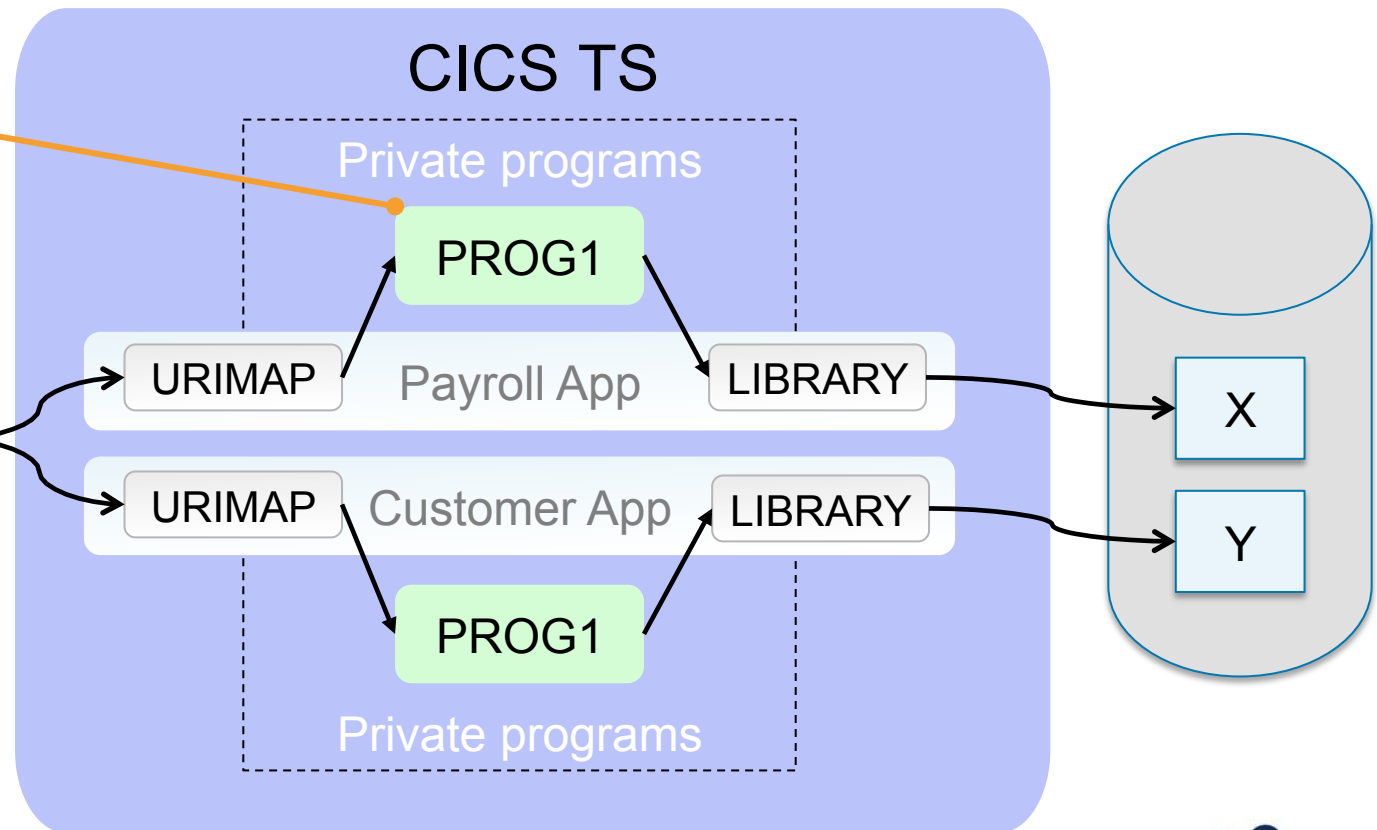

(Hint : Adding more CICS regions is probably not the best answer!)

Multi-versioning

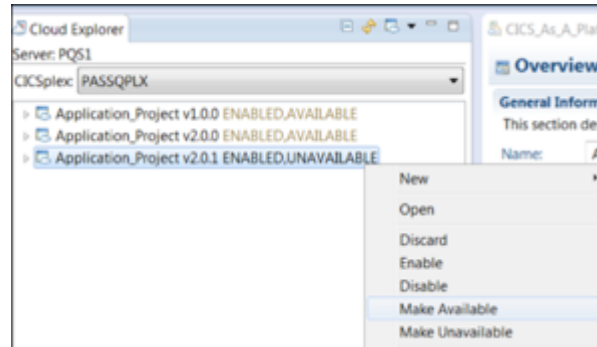

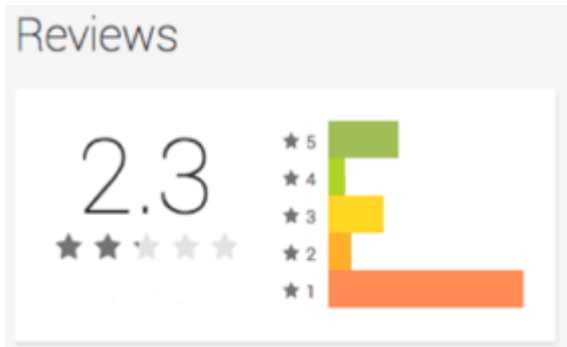

Multi-versioning

Application packaging helps you consolidate onto fewer regions by providing private program definitions

Multi-versioning scenario

A bug has been found and an urgent fix is required immediately

Step 1

After fixing the bug in the code, repackage it with a new micro version number

Step 2

Once installed, switching to a new version of the application is simply a case of making it “available”

Step 3

CICS takes care of moving clients to the new version of the application across all regions within a platform

Wednesday

4:15 PM-5:15 PM

15882: Managing Multi-version Applications in CICS

Speaker: Matthew Webster

Cloud technology is driving change: cloud integration becomes key

Faced with diverse workload requirements, organizations are coming to realize that the **future of cloud computing lies in the hybrid space**, and private clouds are an integral part.

76% of business users, IT leaders and cloud vendors **expect hybrid clouds to be the core of their cloud strategy**, overtaking public and private clouds in the next five years.²

<http://www-935.ibm.com/services/us/en/it-services/server-services/private-modular-cloud-infographic01/index.html>

Cloud platforms & integration

Instant services, runtimes,
and infrastructure for
cloud based applications.

Integration with existing
Systems of Engagement

Clients using TXSeries who
need to balance costs
against growth.

TXSeries on Softlayer for
cloud-style scalability

Simplified system
management and rapid
application deployment.

On premise pattern based
cloud deployment.

CICS TS V5.2 Developer Trial. No cost. No fuss.

- Try before you buy the latest edition of CICS Transaction Server
- No charge license, no single version charging period, no reason to wait
- Easy ordering via IBM ShopzSeries, with internet or physical delivery options
- CICS TS V5.2 Developer Trial is fully supported
- CICS TS V5.2 Developer Trial can be upgraded to production CICS TS V5.2 versions

Evaluate the Value

Explore the Capability

Create the business case

CICS TS Developer Trial

Trial the future

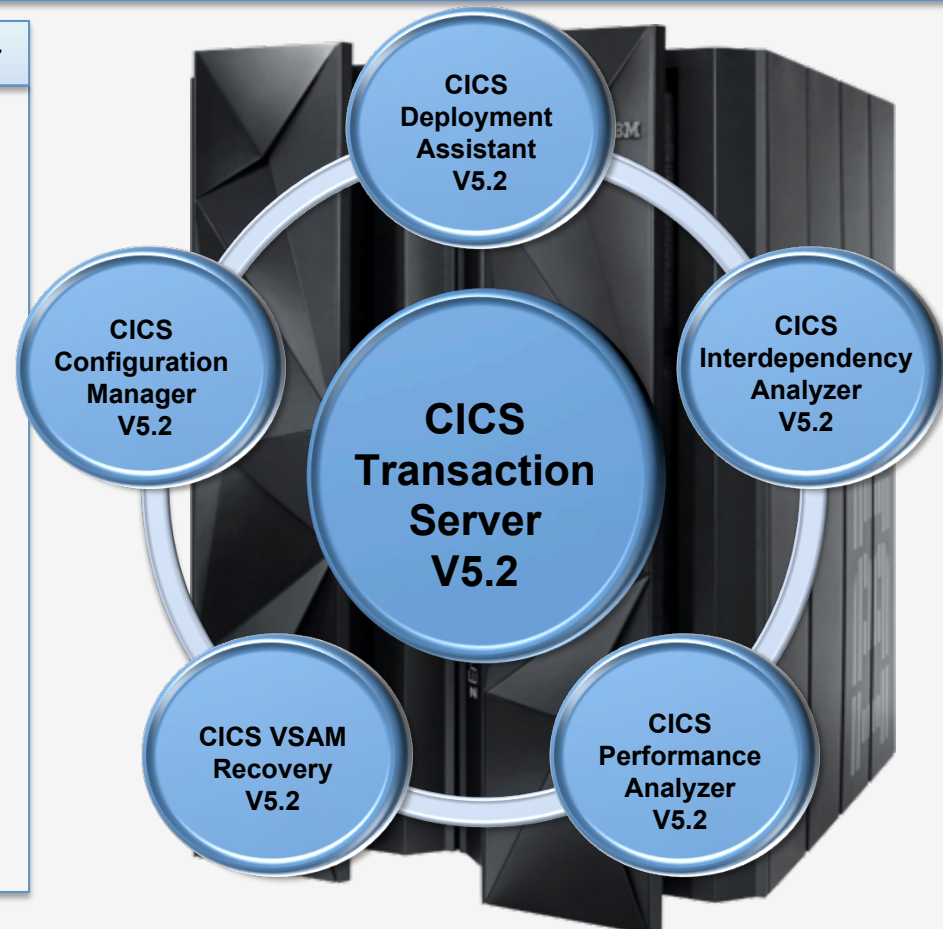

Upgraded and integrated core foundational tools suite

Five core CICS Tools – All updated for V5.2

Fully integrated with CICS TS & CICS Explorer

- Discovery and visualization aids insight into application and platform dependencies
- Automation speeds service delivery and ensures standardization and governance
- Modern, integrated user interfaces lower skills barrier
- Day-1 exploitation of CICS TS V5.2 new capabilities reduces time to value
- Five core tools support and extend the CICS runtime

OMEGAMON Performance Suite v5.3

- Announced on July 15th 2014, the OMEGAMON Performance Suite includes;
 - OMEGAMON XE for CICS on z/OS v5.3.0
 - OMEGAMON XE for CICS TG on z/OS v5.3.0
 - OMEGAMON XE for Messaging v7.3.0
 - OMEGAMON XE for Storage v5.3.0
- SHARE presentations
 - Monday, August 4, 2014: 11:15 AM-12:15 PM Room 311
 - Tuesday, August 5, 2014: 11:15 AM-12:30 PM Room 311
 - Tuesday, August 5, 2014: 3:00 PM-4:00 PM Room 311

CICS Transaction Gateway V9.1

Simple and rapid mobile integration for your enterprise

NEW: CICS Transaction Gateway V9.1

- The headline act? **Mobile integration** (with JSON web services)
 - Quickly bring mobile to any version of CICS TS using CICS TG, without disrupting existing setup
- Enhancements to **connectivity, security & request monitoring**, + **Java 7.1** support
- Announced 1 July 2014, GA 5 September 2014
- Available for z/OS, for Multiplatforms and Desktop Edition

z customers can explore now!
