#SHAREorg

SHARE is an independent volunteer-run information technology association  
that provides **education, professional networking and industry influence.**

**Continuously  
Running  
Systems**

**Best Managed**

**SUSE® Linux Enterprise 12**

**Made for Cloud**

**Most  
Interoperable  
OS**

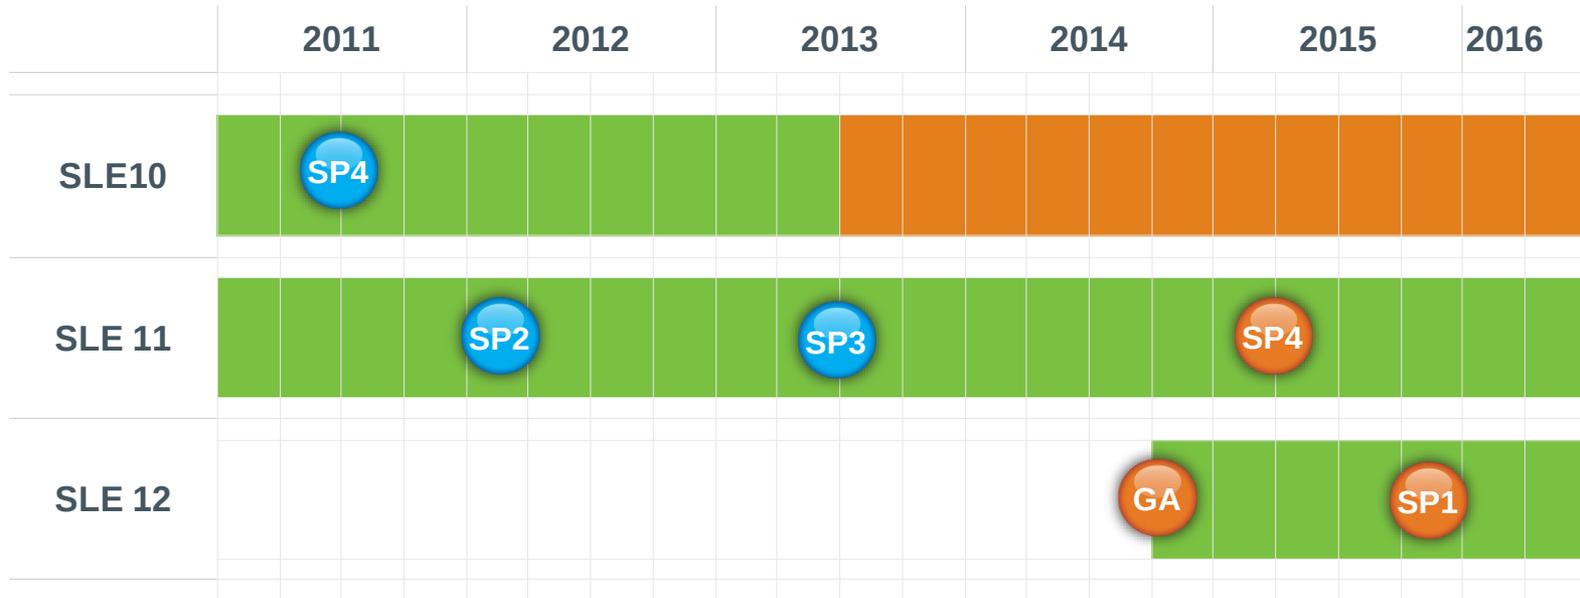

# SUSE® Linux Enterprise Server 12 Lifecycle Model

10 years lifecycle + 3 years Extended Support

- **13-year lifecycle** (10 years general support, 3 years extended support)
- **5-year lifecycle per Service Pack** (2 years general + 3 years extended support)
- Long Term Service Pack Support (LTSS) available for all versions, including GA

# SUSE Linux Enterprise Lifecycle & Code Streams

13-year lifecycle

For SLES 11 and SLES 12,  
10 years general support,  
+3 years Long Term Support

SUSE Linux Enterprise 12

Long Term Service Pack  
Support for every Service Pack

# Hardware

## SUSE Linux Enterprise 12 is 64-bit

- 64-bit hardware is the future
  - 64-bit kernels only
  - Execution of 32-bit applications fully supported via 32-bit execution environment on top of 64-bit kernel
- Virtualization
  - KVM, Xen, z/VM, LPAR support (depends on architecture)
  - 64-bit host; 64-bit and 32-bit guests
- Hybrid Computing
  - Platform specific workloads, GPUs, special purpose PUs
- Device Driver Innovation
  - SUSE Solid Driver Program (SSDP)

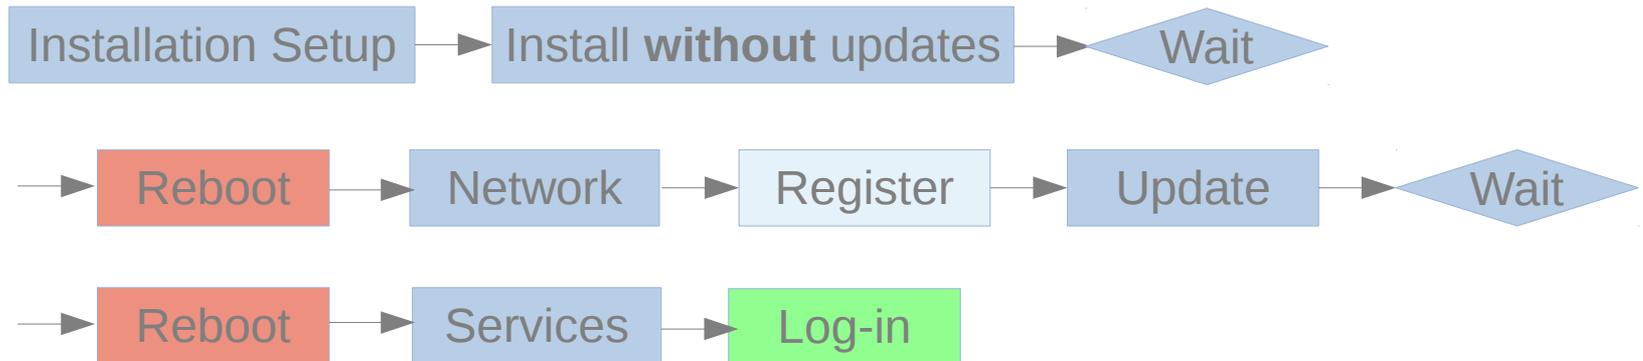

# Technology

## Systems Management

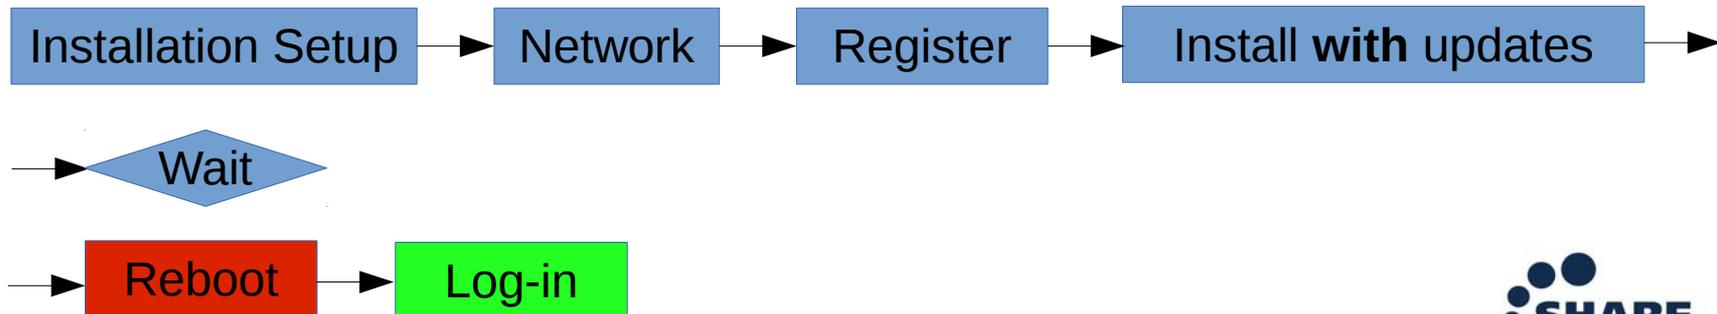

- Made for **Cloud**
  - Integration of SLES and SUSE Cloud
  - Best Guest → Best Cloud OS
- Overhaul of **network management**
  - Address the increased complexity of IaaS
- Improve monitoring support
- Kernel 3.12 based
- **Systemd** replaces SysVinit
- Standardize bootloader to **Grub2**

# SUSE Linux Enterprise 12 Installer – Workflow

## SUSE Linux Enterprise 11

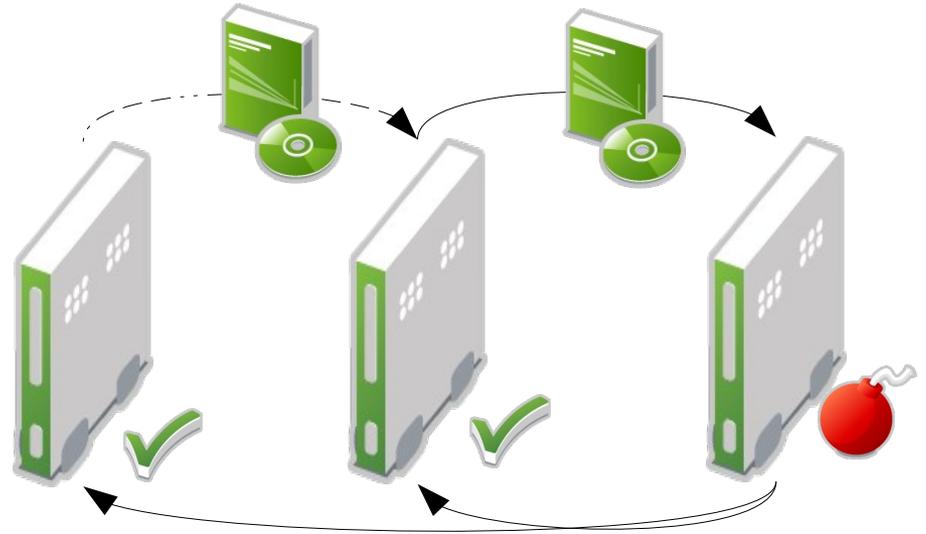

## SUSE Linux Enterprise 12

# SUSE Linux Enterprise Continuously Running Systems (1)

## Snapshot & Rollback For Full System

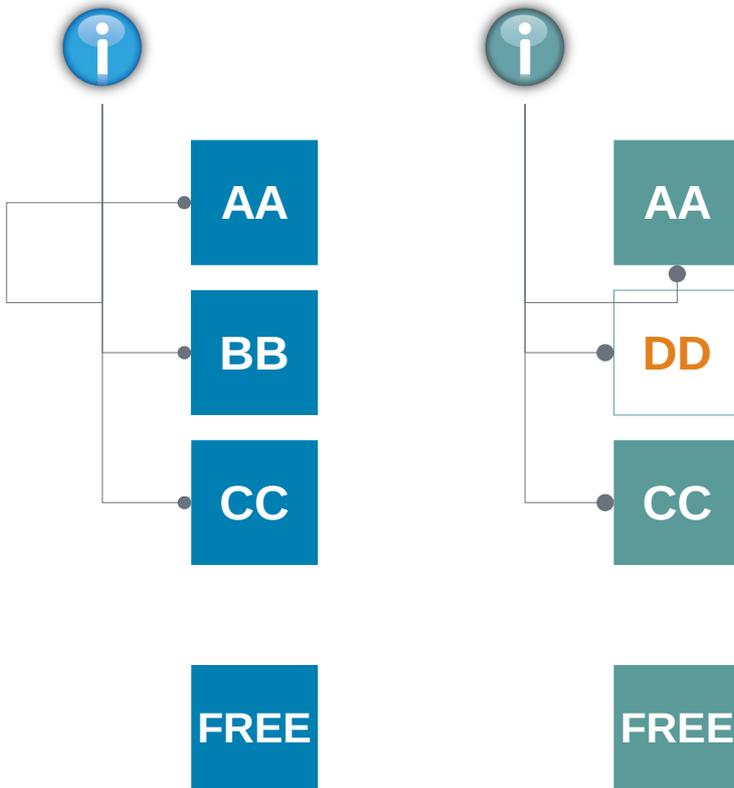

- Restore the whole system to a **known state** that is working
- Reduce upgrade risk
- Components
  - ZYpp
  - Btrfs
  - Snapper
  - Grub2 Bootloader integration

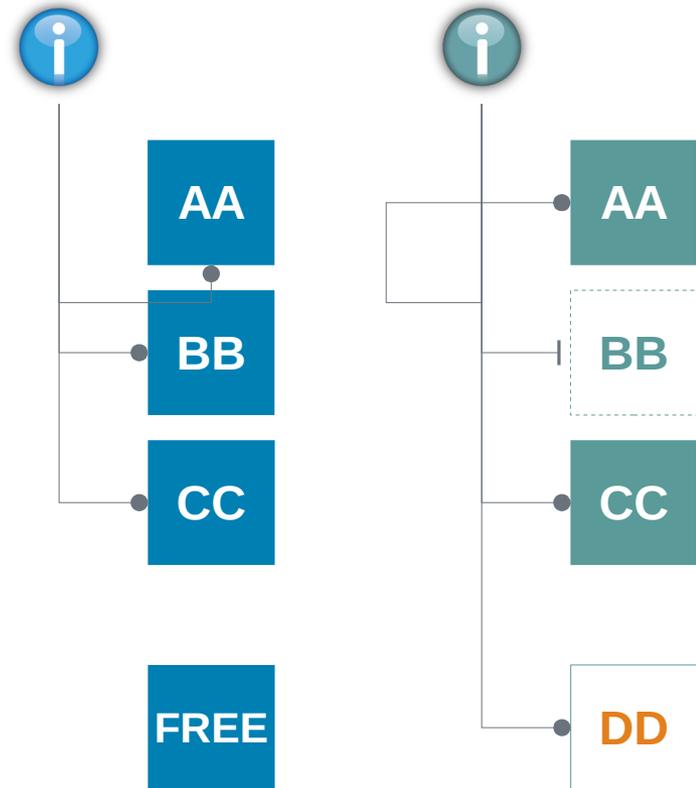

# Technology Overview

## Btrfs Copy on Write

### “Normal” Write

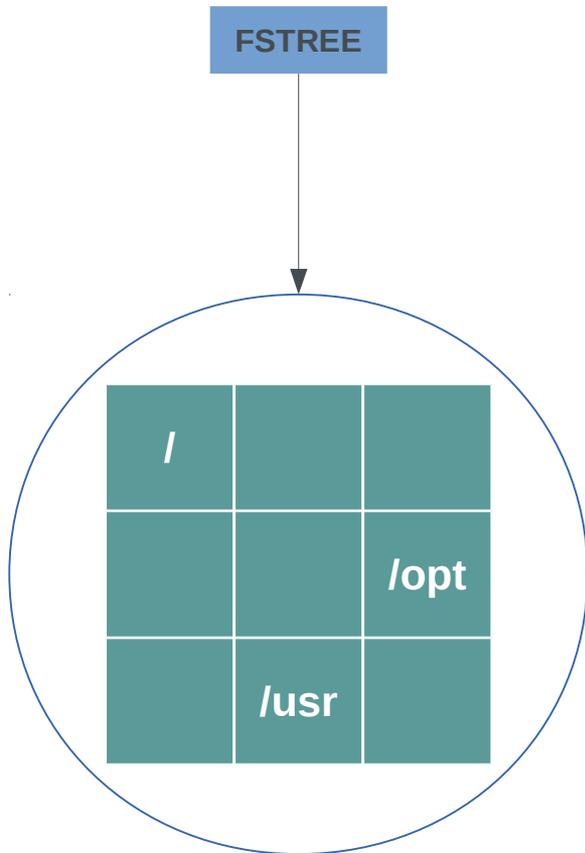

### Copy on Write

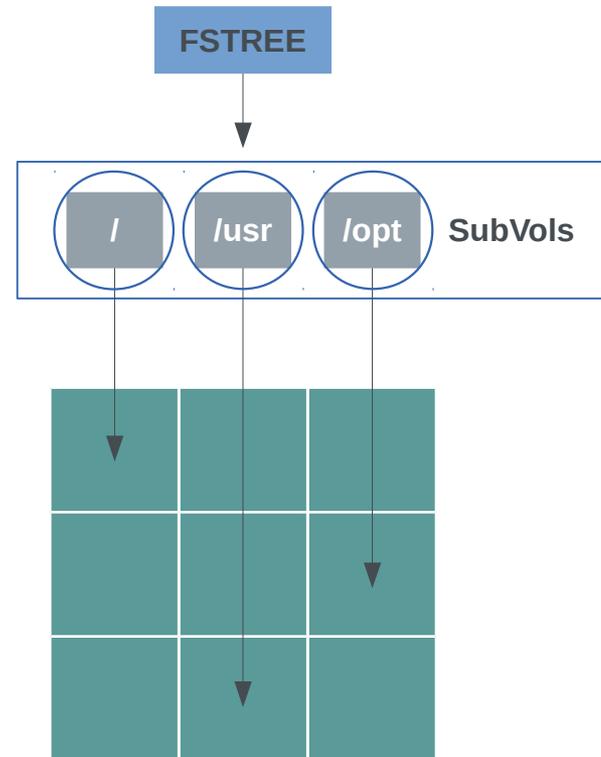

# Technology Overview

## Btrfs Subvolume

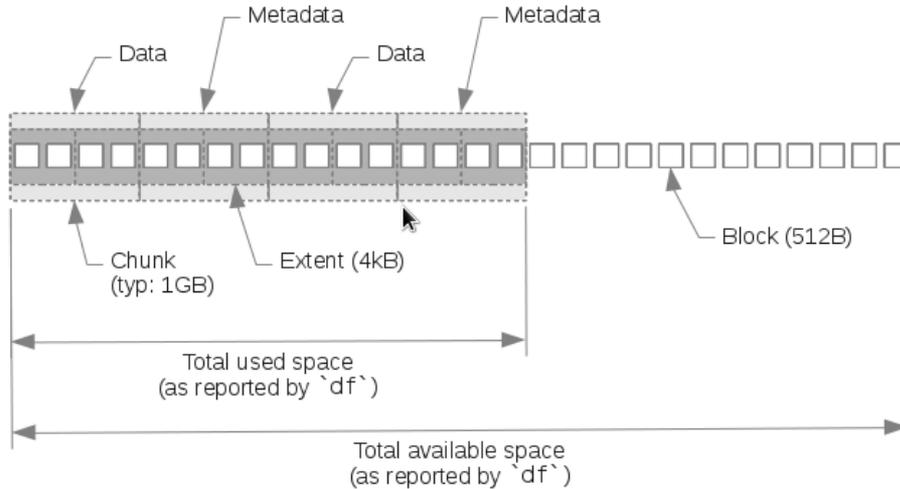

### Normal Filesystem

### With Subvolumes

# Btrfs Disk Space And Extents

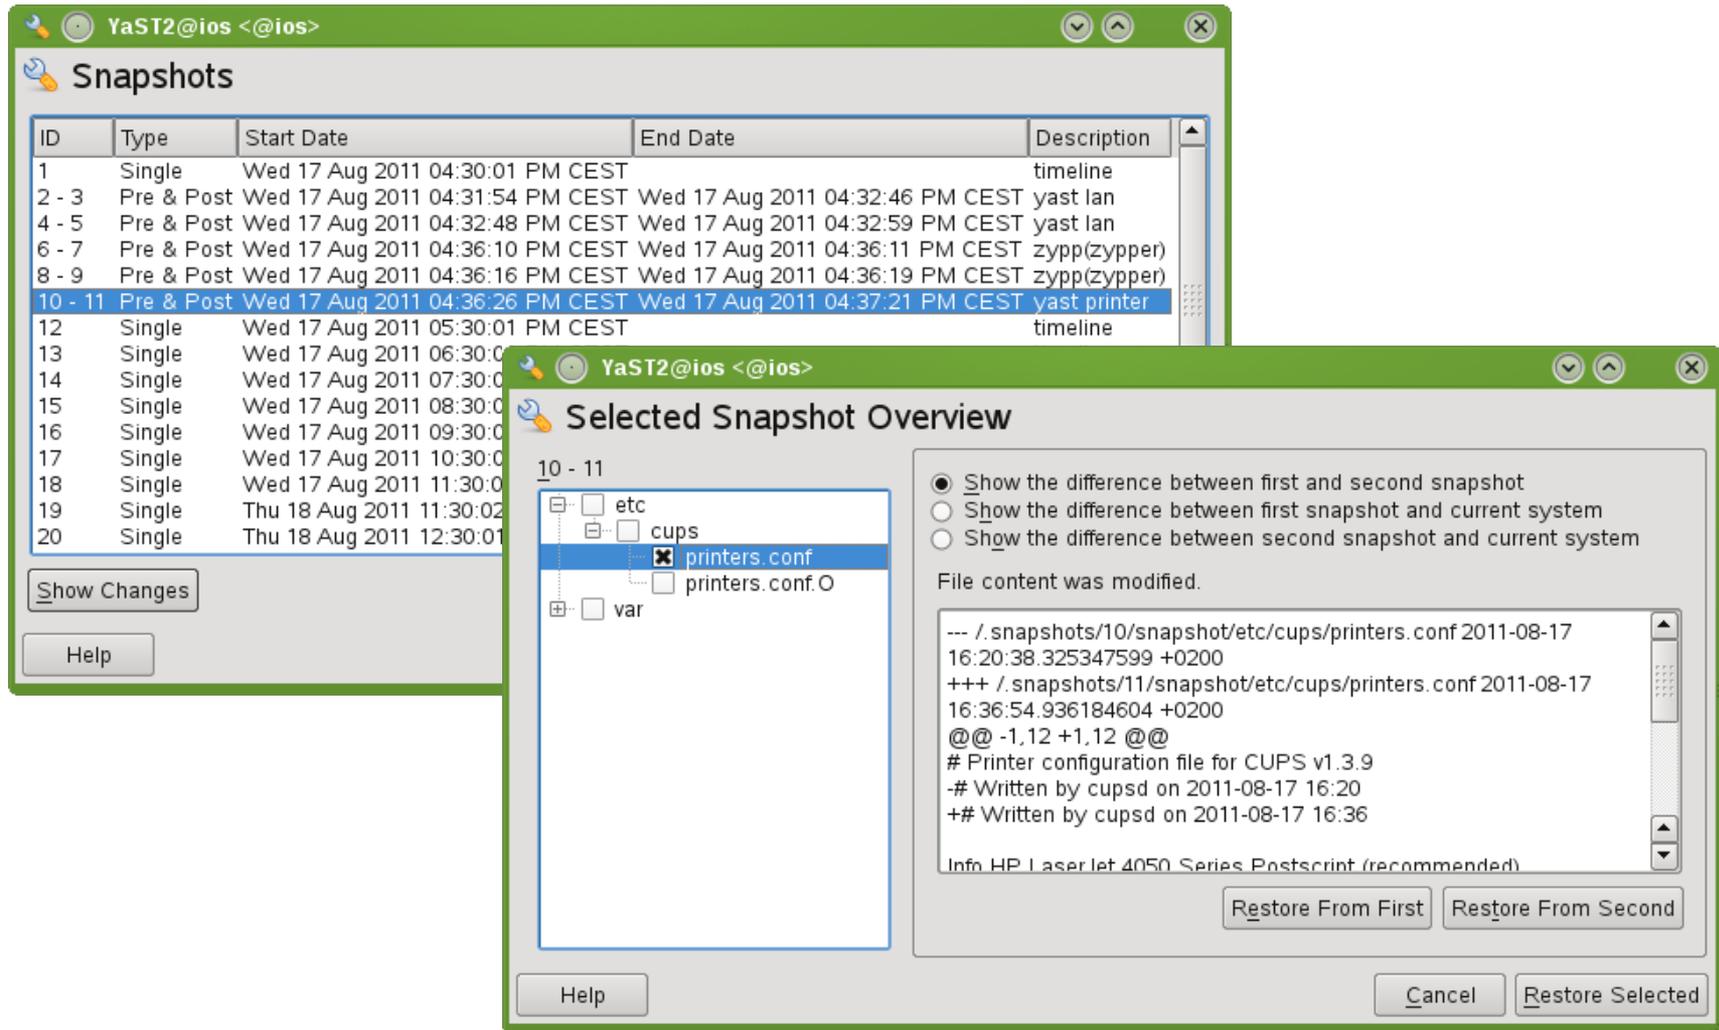

In case of a Btrfs filesystem on a single underlying block device

```
# btrfs filesystem df /
Data: total=14.50GB, used=12.20GB
System, DUP: total=8.00MB, used=12.00KB
System: total=4.00MB, used=0.00
Metadata, DUP: total=1.75GB, used=904.11MB

# df -h /
Filesystem      Size  Used Avail Use% Mounted on
/dev/sda7       20G   14G   4.3G  77% /
#
```

**Disk utilization**  
 12,2GB + 2x 0,9GB + = 14 GB

# Snapshots in SUSE Linux Enterprise 12 YaST2 Management

The main window, titled "YaST2@ios <@ios> Snapshots", displays a table of system snapshots:

ID	Type	Start Date	End Date	Description
1	Single	Wed 17 Aug 2011 04:30:01 PM CEST		timeline
2 - 3	Pre & Post	Wed 17 Aug 2011 04:31:54 PM CEST	Wed 17 Aug 2011 04:32:46 PM CEST	yast lan

### Live Kernel Patching with kGraft

[Try it today](#)

Downtime is expensive

Planned or unplanned—downtime is still expensive. What if you could:

- apply critical updates to a running system, without having to reboot the server?
- eliminate costly planned downtime?

Now you can.

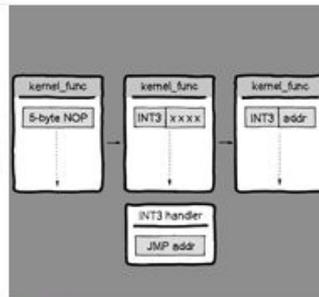

Introducing live kernel patching with kGraft. Technology from SUSE Labs that makes live kernel patching possible.

# Overhaul Network Management

# SUSE Linux Enterprise 12

# Network Management

## The “Wicked” Project

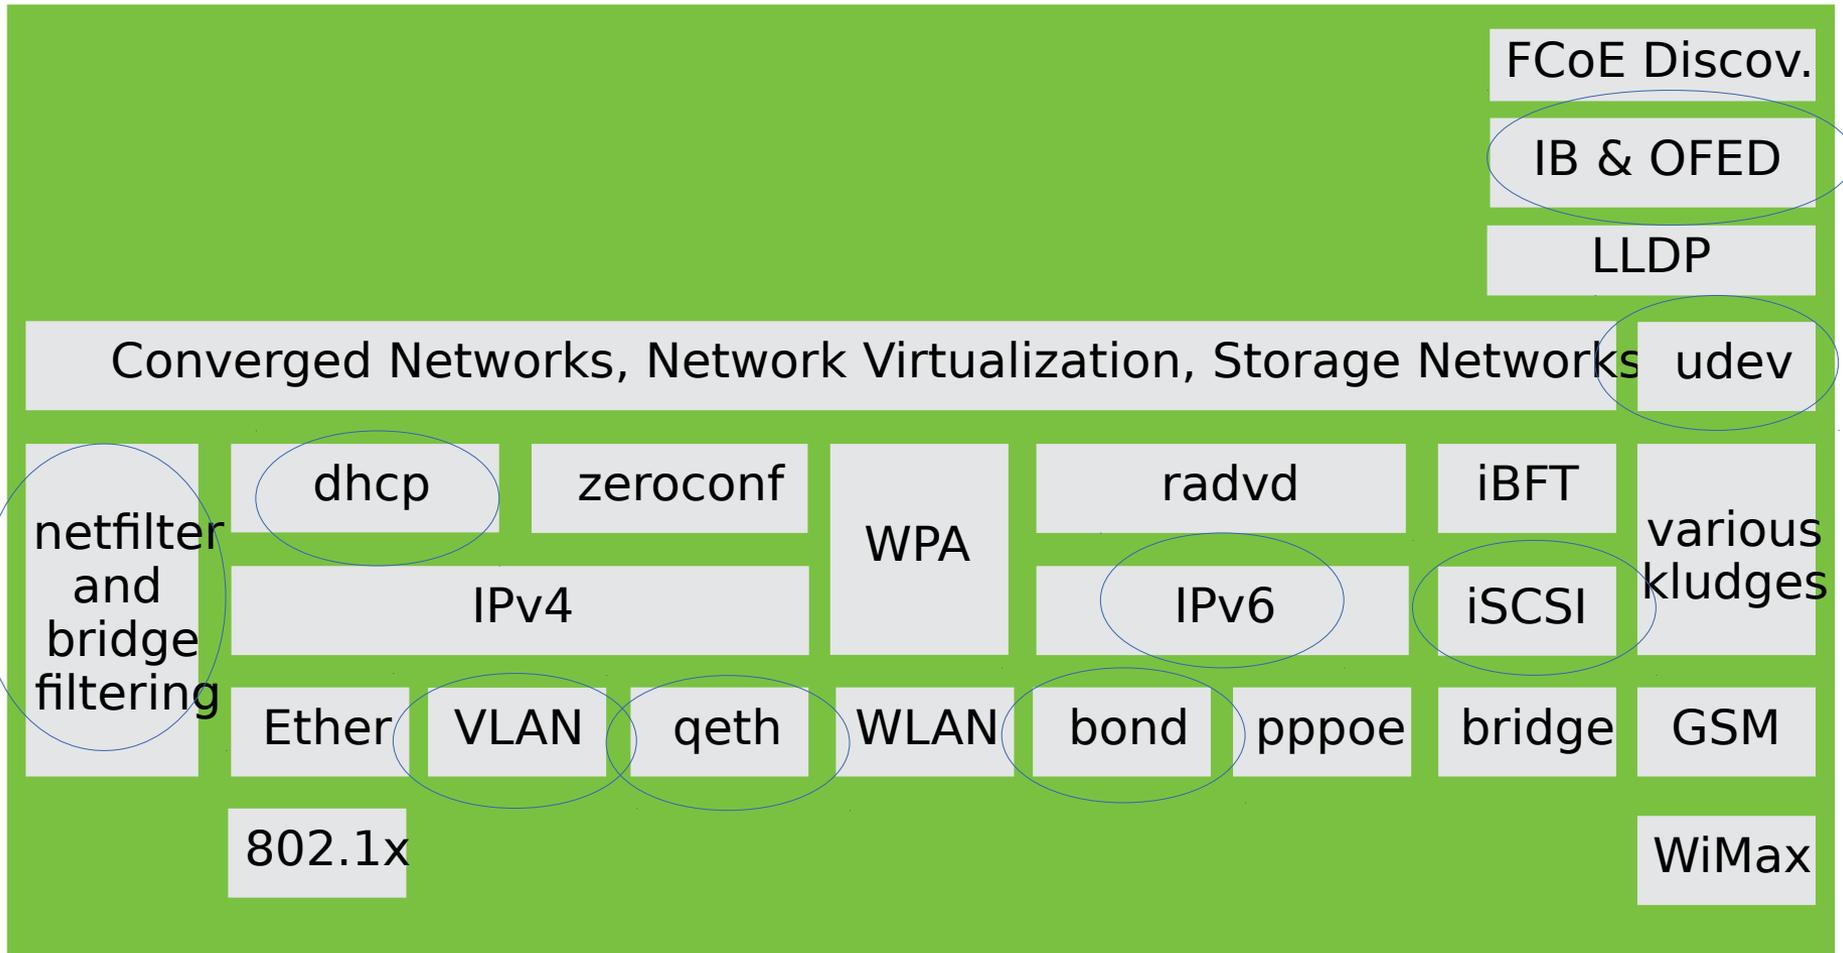

### Goal

- Cope with increasingly complex configurations
- Data Center and End Users
- Benefit
  - Network configuration as a service
  - Smooth adoption & migration

### Technical Attributes

- Architecture-independent
- Extensible
- Small footprint
- Event based

# 2012: The Universe Changed Again

# Implementation Decisions

- Client / Server model
  - DBus Service (provided by a daemon)
- Layered architecture
  - providing separate DBus interfaces
- Structured configuration files
  - XML for now
- Stateless (mostly)
- Extensible
  - Server can be extended with scripts

# Supporting Migration

- Existing Configuration files
  - wicked client can read ifcfg files (both the green and the red flavours)
  - Plan to provide ifup wrapper scripts
- Testing
  - Conflict as little as possible with existing infrastructure
  - Just drop in and test

# SUSE® Linux Enterprise 12 Technology – Systemd

Init Replacement – bring up system and start services

- Bring up system and start services
- Integrate system wide ulimit settings and CGroups
- Activation via Socket and d-bus
- Command line “systemctl”

Compatibility with SystemV init scripts

- Provide infrastructure for existing ISV applications
- LSB compatibility

SUSE specific usability enhancements

- Keep insserv, chkconfig and /sbin/service
- Old style (calling “rc...”) redirected to systemctl
- LSB compatibility for targets like \$network...

# Journal

- Logs facilities bundled in systemd since v38
- Structured logs (stored in binary format on disk, supports compression, rotation)
- Each record is associated with emitting services: allow to see “last log output” when checking a service status
- Can be configured to have persistent (on disk) journal or not (for embedded)
- Allow unprivileged users to have their own separate journal
- Each entry is cryptographically hashed along hash of previous entries (à la git)
- Can work peacefully with various syslog implementations
- Stored on disk by default (use `systemd-logger` package and `/var/log/journal` directory)

# SUSE® Linux Enterprise Server for System z 12

- IBM zEnterprise exploitation
  - zEC12, zBC12, z/VM 6.3, z196 EC, z114 BC support
  - ALS to march=z196, mtune=zEC12 (incl. toolchain)
  - zBX support (blade center extension)
- Improved RAS tools and System z specific support
  - kdump based stand-alone dump
  - CryptoExpress4 support
  - s390-tools
  - ...

# QSAM Access Method for Data sharing with z/OS

Fate 315314 / LTC 92768

- **Description:** enhances the functionality of the s390-tools to allow to access z/OS legacy data directly on the DASD storage devices from a Linux system. Stage 1 comprises non-concurrent access, that is Linux access to z/OS data occurs regardless of z/OS processing (user needs to ensure data is not modified during Linux reading it).
- **Customer benefit**

technical	business
<ul style="list-style-type: none"> <li>• <b>NOTE: be aware of the consequences regarding sharing data on disk between system</b></li> <li>• Uses new filesystem zdsfs</li> </ul>	<ul style="list-style-type: none"> <li>• By avoiding FTP or NFS transfer of data from z/OS the turnaround time for batch processing is significantly reduced.</li> </ul>

# Fill entropy pool with hwrandom

Fate 310591 / [LTC -]

- **Description:** z10 processor and successors have a random number generator built in, that can be accessed at /dev/hwrng if active. However, with z90crypt device driver and crypto express cards /dev/random delivers hardware generated random numbers at high rate.

## • Customer benefit

technical	business
<ul style="list-style-type: none"> <li>• Use /dev/random as a source of random numbers generated by hardware at a high rate</li> <li>• Avoids stalling of processes querying for randomness</li> </ul>	<ul style="list-style-type: none"> <li>• Better scalability for workloads with lots of processes requiring randomness to execute or proceed</li> <li>• Improved security if using a CEX card (larger keys at a faster rate)</li> </ul>

# Appendix

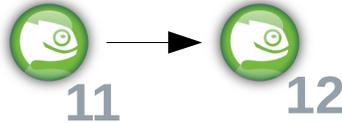

# SLES for System z 11 SP3 (contact [mkraft@suse.com](mailto:mkraft@suse.com))

- **Unattended migration** reduces cost and downtime
  - SUSE Linux Enterprise 11 SP3 to SUSE Linux Enterprise 12
  - SUSE Linux Enterprise 11 SP4 to SUSE Linux Enterprise 12
  - SUSE Linux Enterprise 11 SP4 to SUSE Linux Enterprise 12 SP1
- Example: [http://www.suse.com/documentation/sles11/book\\_sle\\_deployment/?page=/documentation/sles11/book\\_sle\\_deployment/data/cha\\_update\\_auto.html](http://www.suse.com/documentation/sles11/book_sle_deployment/?page=/documentation/sles11/book_sle_deployment/data/cha_update_auto.html)
- **Migration requires system start with SLES 12**
  - Shutdown SLES 11 based system
  - Boot / IPL with SLES 12 system
  - Update SLES 11 → 12 system on disk (pool + updates)
  - Reboot to SLES 12 system

# SUSE Linux Enterprise 12 – Systems Management Advanced Systems Management – Use Cases

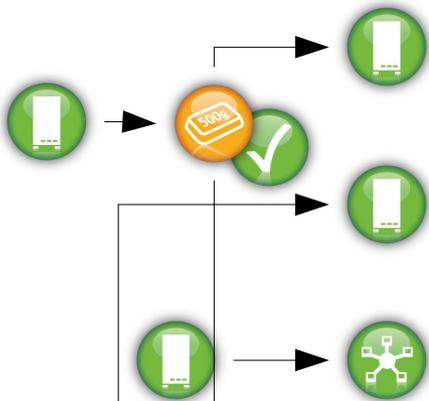

**Physical to Virtual (P2V) or Physical to Cloud (P2C) migrations** and server *consolidation*

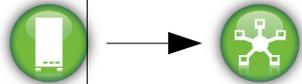

OS and/or application *modernization*

**Disaster Recovery;** (Backup and Restore)

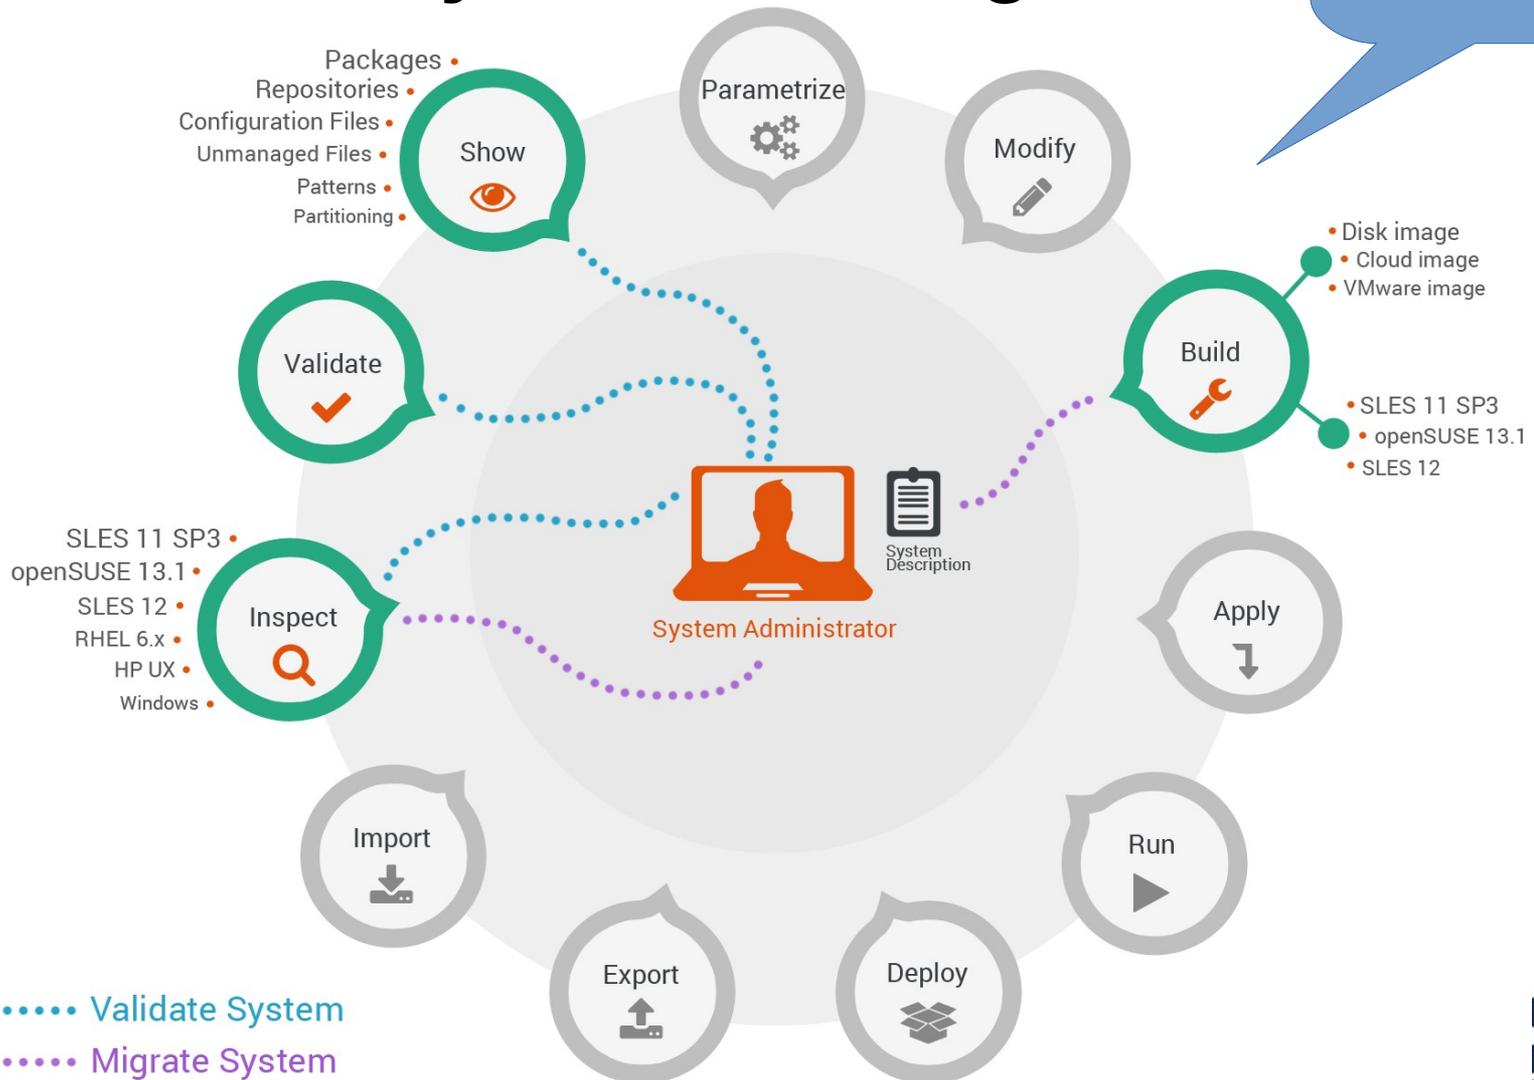

Building and maintaining a “**Golden Image**” for the datacenter (but desktop/branch office scenarios as well)

**Cluster/Scale-out** scenarios

# SUSE Linux Enterprise 12

## Interoperability – Samba 4

- Better **Distributed Filesystem** (DFS) capabilities
- File Server Remote VSS Protocol (FSRVP)
  - Server: integration with btrfs and Snapper
  - Client
- Server-side copy enhancements (btrfs backend)
- Protocol enhancements
  - Encryption
  - SMB 3.0 negotiation

### Benefit

- Authentication with recent Windows / AD Servers
- Linux Server behaves as expected (FSRVP)

# What is systemd ?

- systemd is a system and session manager for Linux, compatible with SysV and LSB init scripts.
- systemd
  - Provides aggressive parallelization capabilities,
  - Uses socket and D-Bus activation for starting services,
  - Offers on-demand starting of daemons,
  - Keeps track of processes using Linux cgroups,
  - Supports snapshotting and restoring of the system state,
  - Maintains mount and automount points
  - Implements an elaborate transactional dependency-based service control logic.
- It can work as a drop-in replacement for sysvinit.

# Systemctl: Start / Stop Service

- `systemctl start|stop|restart|try-restart|reload foobar.service`
- `systemctl kill foobar.service`
- `systemctl kill -s SIGKILL foobar.service`
- `systemctl kill -s HUP --kill-who=main crond.service`

# Systemctl: Service status

- `systemctl` : give you a list of all started services and their status
- `systemctl status foobar.service` : status for one specific service

```
$ systemctl status icecream.service
icecream.service - LSB: icecc

# SUSE Linux Enterprise 12

## Interoperability - IPv6

- **Leading OS – IPv6** compatibility and certification (**USGv6**)
  - <https://www.iol.unh.edu/services/testing/ipv6/usgv6tested.php>
- Tested scenarios
  - DHCP6 server and client
  - IPv6 support in NFS
  - Ensure IPv6 capabilities with UEFI network boot
- Network services
- System Installation & Patching over IPv6

### Benefit

- Deploy and use in pure IPv6 environment
- Scale networks beyond IPv4 limitations
- Answer compliance needs

# SUSE® Linux Enterprise 12

## Security and Certifications

### Standards and Certifications

- Preparation for
  - Common Criteria certification and
  - FIPS 140-2/-3 validation
- NIST (SP) 800-131a compliance

### Linux Security Modules

- SELinux support
  - including MLS policy
  - SELinux not default due to performance impact (~7%)
- AppArmor support

### Research

- Next level of Trusted Computing / Attestation
