15788 Mainframe Skills – The Myth and the Reality

David Rhoderick, IBM
There’s a perception of a mainframe skills shortage…

- … which might discourage companies from deploying new workload on the platform
- … or lead others to consider moving off the mainframe altogether

...Let’s looks at the facts and try to understand the real picture
See “Mainframe Modernization and Skills: The Myth and the Reality message… please distribute!

Mainframe Modernization and Skills: The Myth and the Reality

By Emily Farmer, Senior Software Engineer, and Michael Casile, Senior Software Engineer

Highlights

- Defying predictions, the IBM mainframe is not only alive today, running much of the world’s business, but its usage continues to grow. So to prepare for future resource needs, mainframe customers must adopt plans to onboard the new developers and administrators that will be needed in the future.
- Attracting qualified talent to work on mainframes is not the challenge some might think. IBM has developed a wealth of modern, GUI-based mainframe tools, making the platform more interesting to a new generation and, just as important, more comfortable for those now working in distributed environments who are thinking of making a switch.
- IBM is investing heavily in training a new supply of mainframe resources. More than 360 companies are participating in these initiatives, with some 68,000 people, and counting, trained to date.

Is the mainframe a modern platform?

In April 2014, IBM® celebrated the 50th anniversary of the first mainframe computer, the System/360 (see Figure 1). Growth over that time has been such that today, much of the world’s business runs on IBM mainframes, including 97 of the world’s top 100 banks. Yet perhaps because it has been around as long as it has, the mainframe is seen by some as not modern enough for today’s demands.

Many in business still assume that the only interface to mainframes is through the traditional green screen, that administration is cumbersome and difficult, and that the only people with the skills to administer and develop applications on mainframes are those who grew up with the platform, that is, post-World War II baby boomers. As these boomers approach retirement, some business leaders fear an impending skills shortage, and distributed server vendors have been known to use this fear to promote migrating off the mainframe to more “modern” platforms. A 2011 ComputerWorld study even found that some younger IT professionals were reluctant to focus on the mainframe, seeing it as a stagnant environment.
Three things to keep in mind

1. Numerous indicators show mainframe usage continuing to grow for the foreseeable future.

2. IBM has made considerable investment in intuitive, GUI-based tools for mainframe administration and development.

3. IBM continues to invest heavily in development of mainframe skills for the next generation.
Mainframe usage is growing and is projected to continue

Finally, despite regular declarations that “the mainframe is dead,” the research shows this has never been further from the truth. In reality, the mainframe is working harder than ever. Almost two-thirds of respondents (62 percent) are now using mainframe applications, which were initially designed to perform back-end functions, to now support external-facing services, such as e-commerce (chart 9). This is putting added pressure on the mainframe and, in turn, increasing MIPS. This is evidenced by the fact that 68 percent of respondents believe that the increase in mobile applications is driving higher MIPS usage (chart 10).

Chart 9: 62 percent of companies are using their mainframes to support external applications, such as online banking.

Chart 10: 68 percent of respondents believe that the increase in mobile applications is driving higher MIPS usage.

Compuware commissioned Vanson Bourne to study the impact of new IT trends and models. In September 2012, the independent research firm interviewed 520 CIOs from large enterprises across a range of industries in the U.S., Europe & Asia.
Eagle studies validate that adding workload to mainframes reduces labor cost per unit of work

Study of 17 customers shows labor costs tail off in a predictable, scalable, and economic manner

Formula = 5 FTE to start + 1 FTE for every 625 MIPS

Source: IBM Eagle Team
Independent analysis shows that mainframe administration requirements are typically less than for distributed platforms.

Staffing levels required to maintain a “gold standard”:

- Normalized to VMWare in Medium sized environment
- Staffing levels for z/VM was as much as 13x smaller

Source: Solitaire Interglobal Ltd., 2013
Estimation of the potential mainframe skills demand over the next six years

- IBM CPO projects 37,200 additional mainframe positions needed WW by 2020
  - Projection based on mainframe MIPS growth from 2005-13
- Some number of today’s personnel will retire by 2020, increasing that demand

Source: IBM CPO estimations based on IBM data and assuming current productivity levels

IBM programs such as the Academic Initiative are targeted to meet this demand

(Academic Initiative trains on average 6,400 annually)
Most companies say they are OK now, but many need a talent replenishment plan

80% of System z customers don’t have a skills issues now

- 38% Additional skills not needed now or in 5 years
- 27% Skills needed in 3-5 years
- 15% Skills needed in 1-3 years
- 20% Additional skills needed now

55% of System z sites don’t have a talent plan for mainframe skills

- 55% Do not have a talent plan
- 15% Have a talent plan, but cannot attract applicants
- 12% Have a talent plan, but cannot get hiring approval
- 3% Have a talent plan, but cannot locate skills
- 15% Have a talent plan, can locate skills when needed

“Right now, it's pretty easy to hire programmers, and if they understand Java I can bring them back to procedural languages like Cobol,”
— David Brown, managing director of BNY Mellon’s IT transformation group**
The shortage of mainframe skills projected is only about 10% of a greater problem…

- US government predicts that approximately **810,000** new and replacement administrative personnel will be needed across *all* platforms by 2020

...the requirements for development of an aggressive talent plan should cover all platforms within the data center, and not just the mainframe
Don’t panic —— do plan

- …. mainframes are still a critical technology
  - Especially as back-end servers for mobile computing
  - Critical assets require resource planning
  - Enterprise computing is a different mind-set

- Mainframers often stay in their job their whole career
  - Baby-boomers retiring exacerbates the skills challenge
  - Many learned on the job — often without ANY formal technology-training
  - 10,000 hour rule-of-thumb → on-the-job learning can take 3-5 years

- Get good people
  - Be careful with skill specification
  - Cross-train existing technologists
  - Learn the business first
  - Hire in cohorts

- Modernize your tools and processes…..
Three things to keep in mind

1. Numerous indicators show mainframe usage continuing to grow for the foreseeable future.
2. IBM has made considerable investment in intuitive, GUI-based tools for mainframe administration and development.
3. IBM continues to invest heavily in development of mainframe skills for the next generation.
Today, mainframe system administrators use the latest workstation-based tools

IBM z/OS Management Facility (z/OSMF) - a modern, browser-based console for management of day-to-day operations and administration

- Maximizes productivity of a diversified workforce
  - Simplification of tasks
  - Enhanced collaboration
  - Reduced learning curve

- Role-based, scenario-based

- Integrates with other tools

IBM Explorer for z/OS (z/OS Explorer)

- Provides a single workbench from which to develop, and test z/OS applications and manage related sub-systems
- Common base for many z/OS tools
- Extendable to accommodate user's roles and responsibilities

MQ Explorer plug-in in z/OS Explorer – showing Queues and Jobs
Business Connexion, Ltd. (South Africa) – Services company simplifies its IT to better meet customer requirements

A committed CICS service provider looking to continue delivering strong value proposition

Business challenge:
• Customers consistently requesting “more for less”
• Required easier-to-use interfaces into its CICS systems

Solution:
• Reinvented their IT with the CICS Explorer, CICSPlex System Manager (CPSM), Events Processing and ATOM feeds features
• Enhanced CICS resources to populate a business operations dashboard – highlights all the CICS events in the system

Benefits:
• Made system administration more intuitive and user friendly
• Provides greater control and monitoring, helping customers better react to situations

"The CICS Explorer is a non-chargeable Eclipse based tool that provides our clients views of their resource state and information across multiple CICS Systems - it's simple to deploy and simple to use and should make it easier for our new staff to become competent on our CICS systems more quickly“

- Rob Loyd, data center services manager
An entire enterprise can be efficiently managed with intuitive, GUI-based capability.

Tivoli Enterprise Portal

Thresholds on Status states

Graph showing duration times for each job that has executed

(Tivoli Enterprise Portal was used in the demos in modules 1 and 4)
COBOL continues to be alive and well!

- See “Leaving the Myth business to the ancient Greeks and Romans: COBOL is dead ... seriously?” (http://get.syr.edu/news_alt.aspx)

http://www.computerworld.com/s/article/9225099/Cobol_brain_drain_Survey_results?taxonomyId=154&pageNumber=1
Languages should be selected using “fit-for-purpose”

COBOL’s use

☑ building mission critical applications in the business logic and data management layers
☑ where records are processed and calculated
☑ where performance is important in delivering high service levels
  • sub-second response time is needed
☑ where you need to get programmers to learn a language quickly and that the resulting code needs to be readable by non-programmers
☒ not for the presentation layer where chasing a mouse around a screen is required

Jettisoning CICS/COBOL can be problematic, risky and expensive

- Moving applications off the mainframe with a distributed compiler can lead to significant performance issues
- HP (a major rehosting competitor) estimates that 20% of COBOL lines will need to be rewritten when rehosting

“COBOL and the mainframe run well together, and that's where I want to keep it.”

David Brown managing director of the IT transformation group at BNY Mellon

“Millions of users unknowingly activate CICS every day, and if it were to disappear the world economy would grind to a halt.”

Phil Manchester, Personal Computer Magazine

Source: IBM CPO
Today, COBOL application development is simplified using Eclipse-based graphical editing tools
COBOL development using state-of-the-art Eclipse-based tools

Enhanced editing features

Remote system details

COBOL files
Use a single, rich, integrated interface for all zEnterprise development

Rational Developer for System z

- Supports all mainframe languages (COBOL, PL/I, C/C++, ASM, Java, etc.) and runtimes (CICS, IMS, Batch, USS, DB2, WAS, etc.)
- Fully supports development and reuse of all mainframe assets
- Connected and disconnected modes
  - Connect to z/OS for debug, job generation, etc.
  - Disconnect and reduce mainframe MIPS usage and costs
- Includes Web Services and JSON wrappers
Grow and enhance the skills set of development teams through use of multi-faceted, integrated tools

- RDz makes it easy for Java developers to also contribute to COBOL applications
- Features in RDz enable cross-fertilization of development skills
  - Results in more unified team, back-filling capabilities, enabling future growth
  - Reduces overhead and cost of multiple tool sets
Mainframe Problem Determination Tools (PDT) are integrated into the workstation development environment

- Easily debug and step through multi-tier applications

**Applications under Debug**

- End-to-end debug
- Edit VSAM data
- Analyze ABEND logs!

**Diagram Elements**

- Developing System z application with RDz
- Displaying Fault Analyzer report
- Editing data with File Manager
- Debugging application with Debug Tool
- IBM Debug Tool
- IBM File Manager
- IBM Fault Analyzer
- z/OS
- VSAM
- ABEND Logs
- Java
- ... (Ellipsis)
- COBOL
RDz v9.1 new Integrated Debugger

- Leverages the workstation CPU with smaller mainframe footprint
- Has tighter integration with other views
- Multi-language support
- New breakpoints types can be saved across debugging sessions
- View memory in different formats
- Watch complex variables and see all occurrences of a variable in the code
- New Code Coverage analysis to see what's executed and what's not
IBM DevOps point of view
Enterprise capability to improve efficiency and effectiveness

Accelerate software delivery – for faster time to value
Balance speed, cost, quality and risk – for increased capacity to innovate
Reduce time to customer feedback – for improved customer experience
Tools enable a DevOps approach for continuous development and operations on zEnterprise

Today, customers expect better product quality and shorter release cycles. Businesses must meet this challenge, while keeping costs low.

DevOps:

• A process that addresses this challenge
• Unites Development and Operations around a continuous and agile delivery model
• Enables Testers to have production-like environments
• Ensures an integrated view to govern and manage end-to-end delivery pipeline
Integrate systems of engagement with systems of record

By bringing together the culture, processes, and tools across the entire software delivery lifecycle – spanning mobile to mainframe platforms

Systems of Engagement (SoE) Apps

Develop and Test → Deploy → Operate → Rapid Releases → AppStore

Web Apps

Databases

Integration Test

Production Environment

Frequent Releases

Fewer Releases

Systems of Record (SoR) Apps

Databases

By bringing together the culture, processes, and tools across the entire software delivery lifecycle – spanning mobile to mainframe platforms.
Agile compilation and unit test can be done off-platform to reduce costs and simplify operations

Rational Development and Test (RD&T)

- Compile and Unit Test on an Intel x86 server running Linux
- RD&T server runs z/OS and all mainframe software
- Continuously updated to emulate the latest releases of zEnterprise hardware and software
- Enables developers to rapidly prototype new applications
- Eliminates costly delays by reducing dependencies on operations staff
- Free up mainframe development MIPS for production workload

No interruptions to mainframe operations
Extend support to back-end Systems of Record

**IBM UrbanCode Deploy 6.1**
- Deploy component to IBM z/OS data sets with enhancements to display partitioned data set members in component versions
- Set up artifact repositories in agent relays that cache downloaded artifacts

**IBM Rational Test Workbench 8.6**
- New Application Topology Discovery feature to quickly discover services used by the system under test
- Full range of features aimed at service testing and virtualization in SAP environments
DevOps capabilities for mobile applications with enterprise systems

Accelerate mobile application development

- Quickly design, code, build, test, and deploy mobile apps that run on a wide variety of mobile platforms
- Refactor and extend existing back-end services to provide optimal mobile experience
- Stub out back-ends to simplify test and development
- Automate testing for native and hybrid mobile apps

Rational Test Workbench
IBM Worklight Platform
IBM DevOps services for Bluemix
Rational Application Developer
IBM UrbanCode Deploy
Rational Developer for the Enterprise
CICS Interdependency Analyzer
CICS Performance Analyzer

Enabling you to…

- Design
- Code
- Deploy
- Test
- Refactor and extend existing logic as mobile-consumable services

Continuous Delivery

Open Lifecycle and Service Management Integration Platform

Mainframe skills - The myth and the reality
Nationwide embraces DevOps to drive continuous delivery across platforms and improve speed to market

50% increase in software quality over the last three years

90% on-time delivery vs. 60% previously

70% decrease in user downtime

58% of developers moved to industry top quartile in productivity measures

“We’re more agile as a business and more responsive to our customers. Collaboration has become an expected part of our culture”

— Steve Farley, Vice President, Application Development Center, Nationwide

Master the Mainframe competition is helping a new generation find opportunity in the mainframe

A three-part contest of increasing difficulty, open to high school and college students and offered around the world

A 2010 winner (college)
Comp. Science major from West Texas A&M University, and first year hire at Fidelity Investments as z/OS Systems Prog.

A 2012 winner (high school)
Four-time participant, currently a sophomore majoring in Comp. Science at University of Central Florida

40 students were chosen from contests around the world (1,000+ institutions from 67 countries) to compete in New York City.

GENERATION z. They will create the future.
Master the Mainframe competition is helping a new generation find opportunity in the mainframe

A three-part contest of increasing difficulty, open to high school and college students and offered around the world

43 students from 23 countries

GENERATION z.
They will create the future.
Use the Job Board to find needed skills

Welcome to the System z Job Board
Are you looking to hire talented System z professionals?
Are you seeking a career with System z technology?

Then you've found the right place! This website connects IBM System z clients, partners, and businesses with students and professionals seeking System z job opportunities.

Special limited-time offer! Employers who hire a candidate through Systemzjobs.com and agree to publicize their hiring success can receive a voucher to send an employee to an instructor-led online System z course (valued at $1,200). Once you make a connection through Systemzjobs.com, simply send an email to zskills@us.ibm.com to request your voucher. First-come, first-served!

Job Seekers

- View Job Opportunities
  - Browse the hottest new jobs in the enterprise computing industry.

- Receive job alerts
  - Set up a job agent so that jobs matching your search will be emailed to you.

- Create a free account
  - Store job openings and manage your job search through your My Career account.

- Access your account
  - Log in to your free My Career account.

Employers/Recruiters

- Post a job
  - Post your System z job here to attract the most qualified candidates from universities and industry.
