www.SHARE.org

#SHAREorg

Introduction

- Provide an overview on how to exploit several ISPF features
 - ISPF configuration
 - Stacking commands
 - MODEL command
 - Work Station Agent (WSA)
- Expectations
 - Familiarity with ISPF configuration and MODEL command
 - Capability to allocate personal ISPF data sets to allow testing
- Other Items
 - Links are provided to IBM manuals and other documents to assist in learning these features in more detail
 - May need to adjust Adobe Reader zoom value to view text

Agenda

ISPF Configuration

Introduction

- Provide an overview of several ISPF configuration variables
 - Activate new features and enhancements
 - For new users, reduce the time it takes to configure the environment
- ISPF Configuration Dialog
 - Execute **ISPCCONF** after installing a new z/OS operating system
 - Syntax:
➔ **TSO ISPCCONF**
- Links
 - [SHARE, Tom Conley, Configuring ISPF for Fun and Profit](#)
 - [IBM Publication, ISPF Planning and Customization, Chapter 2](#)
- Items highlighted in yellow are settings used to implement stacking commands and Work Station Agent (WSA)

Variable	Assigned	Notes
APPLID_FOR_SITE_COMMAND_TABLE	WFS	<p>Allows for system/site wide command tables to be defined/used (WFSCMDS)</p> <ul style="list-style-type: none"> - WFS stands for Wells Fargo Site commands - The default is NONE
APPLID_FOR_USER_COMMAND_TABLE	WFU,WFU2, WFU3	<p>Allows users to define up to three different user command tables (WFUCMDS, WFU2CMDS and WFU3CMDS)</p> <ul style="list-style-type: none"> - WFU stands for Wells Fargo User commands - The default is NONE
BLOCK_SIZE_FOR_TEMPORARY_CNTL_DATA_SETS BLOCK_SIZE_FOR_TEMPORARY_LIST_DATA_SETS BLOCK_SIZE_FOR_TEMPORARY_WORK_DATA_SETS	0 0 0	<p>Set the block size to zero to obtain/use half track blocking</p> <ul style="list-style-type: none"> - The defaults are 800, 3146 and 2560
COMMAND_LINE_PLACEMENT	ASIS	<p>Place the command line at the top</p> <ul style="list-style-type: none"> - The default is BOTTOM
DEFAULT_LIBDEF_PROCESSING_OPTION	STACK	<p>When LIBDEFing data sets, the default will be STACK</p> <ul style="list-style-type: none"> - Prevents issues when stacking software on top of one another, specifically, removing previous LIBDEFed data sets - The default is UNCOND

Variable	Assigned	Notes
DEFAULT_SYSTEM_NAME	ON	Displays the Ipar name in the upper left hand corner of all panels - The default is OFF
DISALLOW_WILDCARDS_IN_HLQ	YES	Prevents long enqueues on the master catalog - The default is NO
DISPLAY_EMPTY_MEMBER_LIST DISPLAY_EMPTY_MEMBER_LIST_PATTERN	YES YES	Capability to edit an empty PDS - The defaults are NO and NO
DISPLAY_SEQUENCE_NUMBERS	OFF	- The default is ON
DSLST_RM_ENABLED DSLST_RM_COMMAND	YES %CA1DS34	Allows executing a REXX program to obtain CA1 information when typing an "I", "S" or "M" next to a tape data set from ISPF 3.4 - CA1DS34 is an in-house written utility -- "I" invokes CA1, selects option "1 - INQ/UPD" and inserts the VOLSER to obtain the tape information -- "S" invokes CA1's Browse Module (TSOTIQ) and uses the data set name to obtain the tape information -- "M" invokes CA1's Tape Inquiry Program (TMSBINQ) and uses the VOLSER to obtain the tape information - The defaults are NO and %EDGRPD34

Variable	Assigned	Notes
EDIT_RECOVERY_BLOCK_SIZE EDIT_RECOVERY_PRIMARY_QUANTITY EDIT_RECOVERY_SECONDARY_QUANTITY	27998 800 800	Allows for a large amount of changes and updates - The defaults are 13680, 40 and 200
LOG/LIST_JOB_CARD1	Job Card	Define a standard JOB card format - Software can obtain and use it by coding “ VGET (ZLLGJOB1 ZLLGJOB2 ZLLGJOB3 ZLLGJOB4) ” - The default is NONE
HILITE_DOLOGIC HILITE_IFLOGIC HILITE_PAREN	ON ON ON	Distinguishes lines of code and assists in troubleshooting - The defaults are OFF , OFF and OFF
ISPCTL0_BLOCK_SIZE	0	Set the block size to zero to obtain/use half track blocking - The default is 800
ISPF_TEMPORARY_DATA_SET_QUALIFIER	&SYSNAME.	Inserts the Ipar name in the second level qualifier of the ISPF temporary data set names - Allows logging on to multiple, concurrent TSOs within a sysplex - If the Ipar name begins with a number, suggest placing the character ‘S’ in front of &SYSNAME - The default is NONE

Variable	Assigned	Notes
LIST_DATA_SET_RECORDS_PER_BLOCK	231	Set the list data set records per block to 231 for a 3390 - LRECL 121 * 231 = 27951, half-track for a 3390 - The default is 26
LIST_SYSOUT_CLASS	*	- The default is NONE
LOCAL_LIST_SYSOUT_CLASS	*	- The default is NONE
LOG_DATA_SET_BLOCK_SIZE	0	Set the block size to zero to obtain/use half track blocking - The default is 129
LOG_DATA_SET_DISPOSITION	D	Delete the log data set - The default is NONE
LOG_PAGES_PRIMARY_QUANTITY	0	Not needed/used, decreases response time
LOG_PAGES_SECONDARY_QUANTITY	0	- The defaults are 10 and 10
MAXIMUM_NUMBER_OF_SPLITSCREENS	32	Allows the capability to have 32 split screens - Set PF2=START, PF9=SWAP NEXT and PF21=SWAP PREV; then, activate SWAPBAR - The default is 8
NUMBER_OF_PFKEYS	24	Typing in KEYS will display "Number of Keys = 24" - The default is 12

Variable	Assigned	Notes
OUTLIST_BLOCK_SIZE	0	Set the Outlist Utility block size to zero to obtain half track blocking for OUTLIST data sets - The default is 13566
PROFILE_SHARING	YES	Allows logging on to multiple, concurrent TSOs within a sysplex - Required to run multiple, concurrent z/OSMF ISPF sessions - The default is NO
RETREIVE_COMMAND_STACK_SIZE	4096	Allows saving/retrieving longer primary commands - The default is 512
SCROLL_DEFAULT	CSR	Set the scroll default to cursor - The default is PAGE
SCREEN_FORMAT	MAX	Automatically adjusts screen lines/columns to 3270 emulator terminal type (Model 2, 3, 4 and 5) - The default is STD
SHOW_PFKEYS	OFF	Provides for more screen real estate - The default is ON
SITE_WIDE_INITIAL_MACRO	RESET	Prevents unnecessary messages from appearing when editing a data set or member - The default is NONE

Variable	Assigned	Notes
STANDARD_NUMBERS	OFF	- The default is ON
STATS_EXT_ENABLED	YES	Extended statistics are kept for PDS members - The default is NO
TAB_TO_ACTION_BARS	NO	Pressing the HOME key will position the cursor on the primary command line - The default is YES
UNDO_STORAGE_SIZE	1024	Allocate 1024K of memory to edit UNDO command to be used for keeping history of edit changes - Enables SETUNDO command - The default is 0
USE_KEYLISTS	NO	Makes the PF keys standard throughout ISPF - Assigns PF4=RETURN, PF5=RFIND, PF6=RCHANGE, P7=UP, PF8=DOWN, PF9=SWAP, PF10=LEFT, PF11=RIGHT and PF12=RETRIEVE - The default is YES

Variable	Assigned	Notes
VSAM_BROWSE_ENABLED	YES	Allows invoking a REXX program when browsing, editing or viewing a VSAM file
VSAM_BROWSE_COMMAND	%ISPF34B	- ISPF34B/E is an in-house written REXX program to invoke File-Aid/MVS (F1/F2) or CBT183 (BR)
VSAM_EDIT_ENABLED	YES	- Allows the use of File-Aid/MVS REXX programs F1 (Browse) and F2 (Edit)
VSAM_EDIT_COMMAND	%ISPF34E	- Allows the ability to install and invoke Ditto, File-Manager/MVS or Review from the CBT tape
VSAM_VIEW_ENABLED	YES	- The defaults are NO and FMNMAIN DSB /
VSAM_VIEW_COMMAND	%ISPF34B	
WSA_DOWNLOAD_DATA_SET	'SYS1.SISPGUI'	The data set name is inserted into the ISPF 3.7.1 screen - The default is 'ISP.SISPGUI'

Stacking Commands

Introduction

- Stacking commands provide the capability to invoke any application from anywhere within ISPF and not have to be located at the user or main menu, reducing keystrokes
- Allows multiple software products to be stacked on one split screen and each split screen is a separate stack
- Stacking commands are implemented using the ISPF site and user command tables ([slide 6](#))

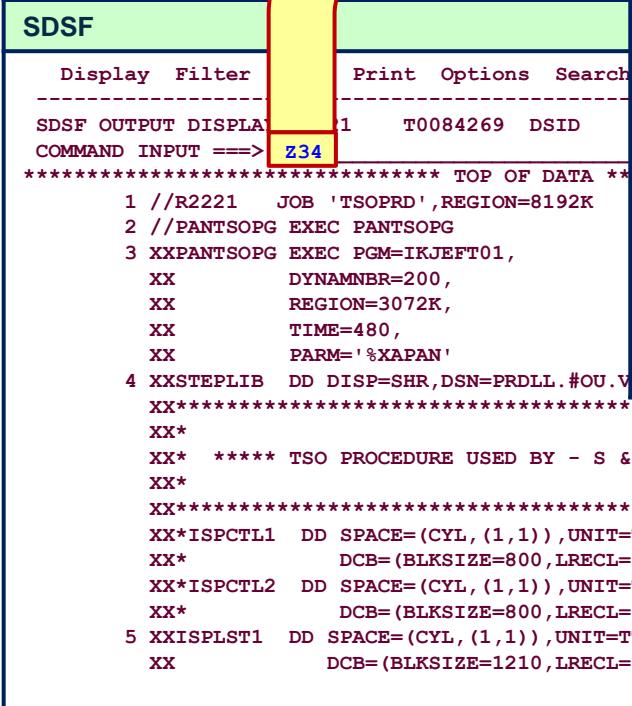

Syntax

- All menu options are stacking commands
- IBM Primary Menu
 - Prefix the character “Z” in front of option (**Z##**)
 - Examples:
 - **Z1** will invoke ISPF option 1, Browse
 - **Z2** will invoke ISPF option 2, Edit
 - **Z34** will invoke ISPF option 3.4, Data Set List
 - **ZSD** will invoke ISPF option SD, SDSF
- Developer and System Menu
 - Type in the entry name
 - **CA7**, **ABENDAID**, **NDM**, **OPSMVS**, etc.
 - Only need to type in the 1st three or four characters
 - **ABE** for ABENDAID
 - **OPS** for OPSMVS

How does it work?

- A user in SDSF may have a need to invoke ISPF 3.4, Data Set List Utility, for a quick look at a data set
- By simply keying in **Z34** on the command line, ISPF 3.4 is stacked on top of the current dialog, without interrupting the SDSF session or starting up a new logical split screen
- The **END** or **RETURN** PFkeys (**PF3/4**) will cause an immediate return to the suspended dialog, in this case, SDSF

Example

```

SDSF
Display Filter Print Options Search
-----
SDSF OUTPUT DISPLAY 1 T0084269 DSID
COMMAND INPUT ==> Z34
***** TOP OF DATA ****
1 //R2221 JOB 'TSOPRD',REGION=8192K

Menu RefList RefMode Utilities Help

Data Set List Utility

Option ==> _____ More: +

blank Display data set list	P Print data set list
V Display VTOC information	PV Print VTOC information

Enter one or both of the parameters below:

Dsname Level . . . PRSS.R2221.JCL _____

Volume serial . . . _____

Data set list options

Initial View	Enter "/" to select option
1 1. Volume	/ Confirm Data Set Delete
2. Space	/ Confirm Member Delete
3. Attrib	/ Include Additional Qualifiers
4. Total	/ Display Catalog Name
	- Display Total Tracks
	- Prefix Dsname Level

When the data set list is displayed, enter either:
 "/" on the data set list command field for the command prompt pop-up,
 an ISPF line command, the name of a TSO command, CLIST, or REXX exec, or

STACK – Utility

- An in-house utility called **STACK** or **STK** was developed to display all available stacking commands
- Displays all available commands defined in the site (**WFSCMDS**) or user (**WFU[2|3]CMDS**) command tables
- Lists all entries on the Developers, System and ISPF menus, plus TSO commands like **PING**, **NETSTAT**, etc.
- An easy way to locate, execute and obtain product information

STACK – Example

- Typing in **STACK** or **STK** from any panel displays all stacking commands

----- (Stacking Commands) ----- Row 1 to 12 of 342			
Command ==>		Scroll ==> CSR_	
Command: F xxx - Find text L xxx - Locate text S xxx - Sort column O xxx - Only text R - Reset display X xxx - Exclude text D - Save to DSN M - Mail P - Print H - Hide header			
Line:	S - Exec software, B - Tutorial, I - DSN info, X - Exclude row		
S	Command	Trunc	
-	-	-	-----
-	AAVIEW	3	AbendAid Hotkey
-	ABENDAID	3	Dump Analysis Tool
-	AMBLIST	3	Load Module Map and Cross Reference Listing
-	APFLIST	4	APF Data Sets
-	APPC	0	Advanced Program To Program Communication
-	ASID	0	Address Space Identifier (ASID) Usage Summary
-	AUTOCMDS	5	OPSMVS - MVS Automation Commands
-	AXCIS	0	Administration
-	BAT	0	Batch Job Statistics for CA7, TSO, STC, etc.
-	BDT	0	Bulk Data Transfer
-	BLKSIZE	4	Data Set Block Size and Space Recommendation
-	BMCADM	4	DB2 BMC Administrative Products [DB2A]

Pros & Cons

- Pros
 - Enhances productivity in ISPF
 - Allows invoking multiple applications on one screen and on top of one another
 - The "Stacking" capability is limited only by the amount of TSO virtual storage
 - Saves typing and reduces the amount of time needed to invoke the facility
 - Typing in “=??” will remove the entire stack
 - Where ?? is an ISPF menu entry
 - Examples: =3.4, =D.ABENDAID, =X, etc.
- Cons
 - When two or more applications are stacked on the same split screen
 - Only one, the application on top of the stack, is accessible
 - Applications in the middle of the stack are inaccessible

Implementation – ISPCCONF

- ISPF Configuration Utility
 - Type in
 → TSO ISPCCONF
 - Define and set
 - APPLID_FOR_SITE_COMMAND_TABLE = WFS
 - APPLID_FOR_USER_COMMAND_TABLE = WFU, WFU2, WFU3
 - DEFAULT_LIBDEF_PROCESSING_OPTION = STACK
- The user command table allows programmers to create their own personal or team stacking commands
 - WFUCMDS, WFU2CMDS and/or WFU3CMDS
- Ensure ISPCFIGU module, created by ISPCCONF, is located in
 - LPA or LNK List
 - or ISPLLIB (STEPLIB) allocated to TSO logon proc

Implementation – ISPF 3.9

- The next few slides will demonstrate how to create a site command table ([WFSCMDS](#)) using ISPF 3.9, Commands
- Use the same process to create user command tables ([WFUCMDS](#), [WFU2CMDS](#) and [WFU3CMDS](#))
- Prerequisite
 - Must allocate a PDS or PDSE data set to ISPTABL DD card
 - This data set is where the site command table will be saved ([WFSCMDS](#))
 - Preferably a data set concatenated to the ISPTLIB DD card
 - Allows easy testing and validating of site commands
 - The data set attributes must be RECFM=FB,LRECL=80
- Highlighted in **yellow** is data typed in on the ISPF 3.9, Commands, panel

Implementation – ISPF 3.9

- Invoke ISPF 3.9 and insert the site command table name ([WFS](#))

```

Command Table Utility
Command ===> _____

Specifications
Application ID . . WFS
Enter "/" to select option
Show description field

Command table search order
Application table . . : ISP
User table 1 . . . . :
User table 2 . . . . :
User table 3 . . . . :
Site table 1 . . . . :
Site table 2 . . . . :
Site table 3 . . . . :
System table . . . . : ISP

If no application ID is specified, the current application ID will be
used. The name of the command table to be processed is formed by
prefixing the application id to the string 'CMDS'. For example:
Application ID . . TST results in a command table name of 'TSTCMDS'.

```

Implementation – ISPF 3.9

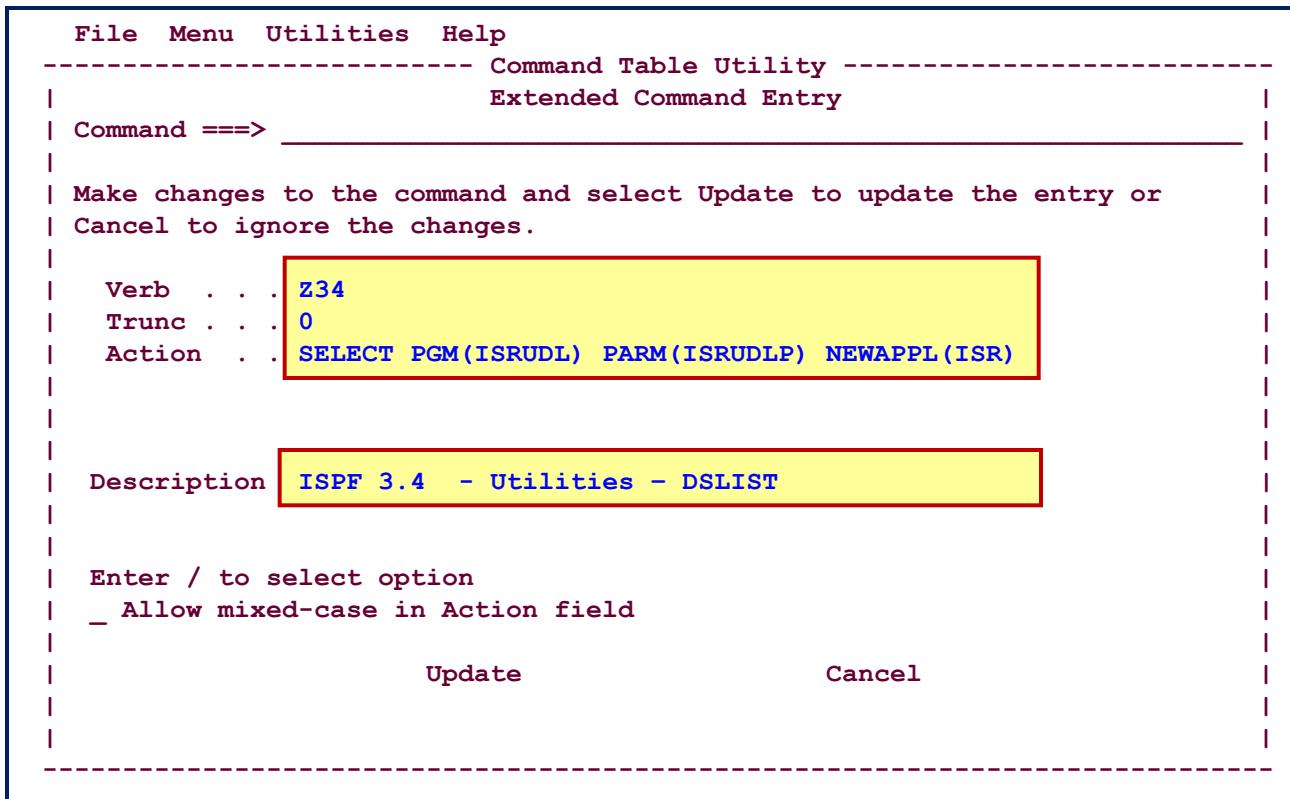

- Tab down to an entry and type in “E” for edit

```
File Menu Utilities Help
-----
Update WFSCMDS          Row 1 to 15 of 17
Command ===> _____      Scroll ===> CSR_____
Insert (I), delete (D), repeat (R) and edit (E) command entries.
Enter END command to save changes or CANCEL to end without saving.

    Verb      T Action
E _____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -  
_____ -
```

Implementation – ISPF 3.9

- Insert the Verb (stacking command), the Trunc (number of characters needed), the Action (what to execute/invoke) and the Description

Implementation – ISPF 3.9

- VERB
 - Stacking command
 - Must follow IBM's naming convention
 - 1st char = A-Z \$#@ and 2nd-8th char = A-Z 0-9 \$#@
 - Must be 2 to 8 characters in length
- TRUNC
 - The minimum number of characters the user must type
 - If zero or equal to the verb length, the entire command must be entered
- ACTION
 - SELECT command, program or selection panel to be given control
- Description
 - Brief description/purpose of command
 - 80 characters or less

Implementation – ISPF 3.9

- Repeat the process for all menu entries
- Terminate/re-invoke ISPF and test typing in a stacking command
- Copy the site command table ([WFSCMDS](#)) into an ISPTLIB data set accessible to everyone
- To update the active site command table ([WFSCMDS](#))
 - Make a copy (ex: [WFSNCMDS](#))
 - Use ISPF 3.9 to make changes ([WFSNCMDS](#))
 - Copy with replace ([WFSNCMDS](#) → [WFSCMDS](#))
 - Terminate/re-invoke ISPF and validate

Suggestions

- Always define site commands with three or more characters
 - Stacking commands take precedence over menu options
 - Prevents menu conflicts
- Prefix the character “**Z**” in front of all IBM Primary Menu options
 - Very few selection menus use the character **Z** and a number (**Z1**, **Z2**, etc.)
- Ensure software LIBDEFing data sets use sub parameter **STACK**
 - Change default LIBDEF processing option to **STACK** in the site command table ([Slide 6](#))
 - Do not use LIBDEF sub parameter **UNCOND**
 - Prevents removing previous LIBDEFed data sets

Suggestions

- To prevent S878 abends, due to several split screens and stacks
 - Increase the TSO logon size to 8 megabytes (8192K) or above the line
 - Set the REXX/CLIST variable storage above the line
 - ➔ **TSO PROFILE VARSTORAGE(HIGH)**
- Use ISPF 3.9, Commands (Create/change application command table)
 - Specifically designed for updating the site and user command tables
 - Whereas ISPF 3.16, Tables (ISPF Table Utility) is a general purpose utility
 - Used to update a wide variety/range of tables

Notes

- Command table search order

Order	Command Table	Member
1	User command table 1	WFUCMDS
2	User command table 2	WFU2CMDS
3	User command table 3	WFU3CMDS
4	Site command table 1	WFSCMDS
5	Site command table 2	
6	Site command table 3	
7	System table	ISPCMDS

IVPs

- Some Independent Vendor Products (IVPs) provide the ability to implement stacking commands
- CA – PDSMAN
 - Initialization parameter
 - Use **\$EZYCMD** to define site commands
 - Pros
 - Refresh the site command table by executing the following MVS command:
➔ F PDSMAN,REFRESH
 - Cons
 - To test/validate, must use a different Ipar from the one the general TSO population is using
 - Must terminate/re-invoke ISPF to access new commands
 - Does not allow user command tables

CBT Tape

- Several command table utilities can be found on the CBT Tape
- Link
 - [CBT Downloads](#)

MODEL Command

Introduction

- MODEL command
 - IBM edit macro
 - Quickly/easily obtain skeleton ISPF commands
 - Most useful, but least known/utilized
 - Continually being updated/enhanced by IBM
 - Only usable in EDIT and VIEW mode
- Links
 - SHARE, Session 15045, Mar 2014, Liam Doherty and Peter Van Dyke
 - [ISPF Editor – Beyond the Basics, Hands-On Lab](#)
 - SHARE, Session 2646, August 22, 2002, Lionel B. Dyck
 - [ISPF – Design Coding Hints and Tips](#)
 - Chapter 4, Using edit models
 - [ISPF – V2R1 – Edit and Edit Macros](#)

Enhanced

- The MODEL command can be enhanced to provide the following:
 - IBM, OEM and in-house JCL skeletons
 - SDSF REXX examples
 - REXX commands
- The next few slides display the following:
 - Changes highlighted in the IBM **ISREMCLS** panel
 - The **ISREMJCL** panel containing table of contents of all JCL utilities
 - Sample JCL skeletons, **MIEHLIST** and **MUTKT**
 - Changes highlighted in the IBM **ISREMRXC** panel
 - Where to obtain SDSF REXX and REXX commands
- Highlighted in **yellow** are changes made to the IBM panels

JCL – ISREMCLS – Panel

Model Classes

Option ==> _____

Enter number or Class of model.

Enter END command to cancel MODEL command.

```

MUTKT

```
/*
/* PURPOSE: ABEND JOB WITH USER CODE
/*
/* STEP010 EXEC PGM=UTKT,PARM=999,COND=(0,EQ,??????)
)N*-----*
)N* Description:
)N*   'UTKT' was written to provide a graceful abend exit
)N*   point for test and production jobs when JCL execution
)N*   needs to be stopped due to prior step execution return
)N*   codes.
)N*-----*
)N* PARM field:
)N*   The number of characters present in the PARM field
)N*   determines the user abend code to be issued. In the
)N*   below example, UTKT abends with a user 0003.
)N*-----*
)N* PARM field limitations:
)N*   - Can contain any combination of alphanumeric and
)N*     national ($,#,@) characters.
)N*   - Up to 100 characters are allowed
)N*-----*
```

REXX – Skeletons

MRXPOS

```
)NPOS (Position)
)N
)N+-----+
)N|
)N| >>--POS(needle,haystack-----)->< |
)N|      +-,start+-           |
)N|
)N+-----+
)N
)NReturns the position of one string, needle, in another haystack.
)N(See also the INDEX and LASTPOS functions.) Returns 0 if needle is
)Nthe null string or is not found or if start is greater than the
)Nlength of haystack. By default the search starts at the first
)Ncharacter of haystack (that is, the value of start is 1). You can
)Noverride this by specifying start (which must be a positive whole
)Nnumber), the point at which the search starts.
)N
)NHere are some examples:
)N
)N POS('day','Saturday')      -> 6
)N POS('x','abc def ghi')     -> 0
)N POS(' ', 'abc def ghi')    -> 4
)N POS(' ', 'abc def ghi',5)  -> 8
)N
)N+-----+
```

MRXSAY

```
)NSAY
)N
)N+-----+
)N|
)N| >>--SAY-----;->< |
)N|      +-expression+-           |
)N|
)N+-----+
)N
)NSAY writes a line to the output stream. This typically displays it
)Nto the user, but the output destination can depend on the
)Nimplementation. The result of expression may be of any length. If
)Nyout omit expression, the null string is written.
)N
)NIf a REXX exec runs in TSO/E foreground, SAY displays the expression
)Non the terminal. The result from the SAY instruction is formatted
)Nto the current terminal line width (as defined by the TSO/E TERMINAL
)Ncommand) minus 1 character. In TSO/E background, SAY writes the
)Nexpression to the output stream, which is SYSTSPRT. In either case,
)Nwhen the length is undefined (LINESIZE() returns 0), SAY uses a
)Ndefault line size of 80.
)N
)NIf an exec runs in a non-TSO/E address space, SAY writes the
)Nexpression to the output stream as defined by the OUTDD field in the
)Nmodule name table (see item -MODNAME). The system default is
)NSYSTSPRT. The ddname may be changed on an application basis or on a
)Nsystem basis.
)N
)NExample:
)N
)N data=100
)N Say data 'divided by 4 =>' data/4
)N /* Displays: "100 divided by 4 => 25" */
)N
)N+-----+
```

Work Station Agent

Introduction

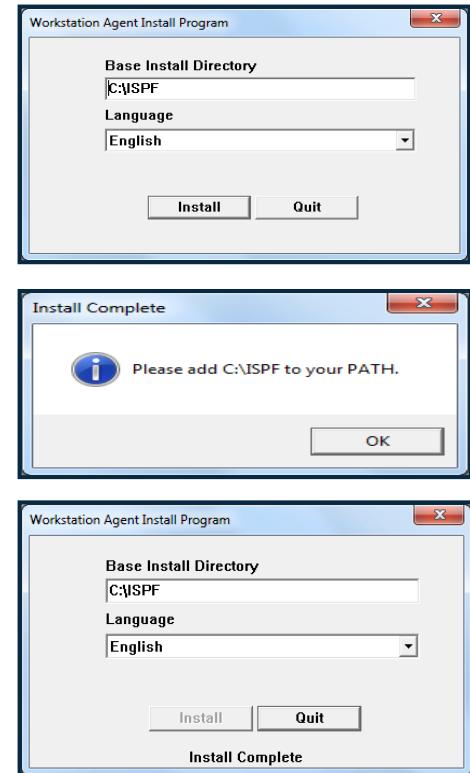

- Work Station Agent (WSA) was introduced in ISPF V4 in MVS/ESA (1994)
- WSA is most useful for customers with the following tendencies:
 - Have a lot of screen real estate, several monitors connected to their PC
 - Prefer to use one editor to modify and view mainframe/PC files
 - Frequently download/upload files from their workstation
- Links
 - TSO Times, Spring 2004, Dave Salt
 - [Performing File Transfer using ISPF Work Station Agent \(WSA\)](#)
 - Appendix A, Installing the Client/Server Component
 - [ISPF – V2R1 – Users Guide – Vol 1](#)

Pros & Cons

- Pros
 - Easily transfer all members in a PDS file to a folder
 - **SPLIT** adds a new logical screen, acts like **START**
- Cons
 - Work Station Agent must be active
 - Maximum fixed window size, can not enlarge
 - Window can be resized smaller, but hides screen
 - Not supported
 - Character-level color, intensity and highlighting
 - Field-level intensity and highlighting
 - **FIND** does not work in browse mode
 - Can not initiate GUI display while in split screen mode

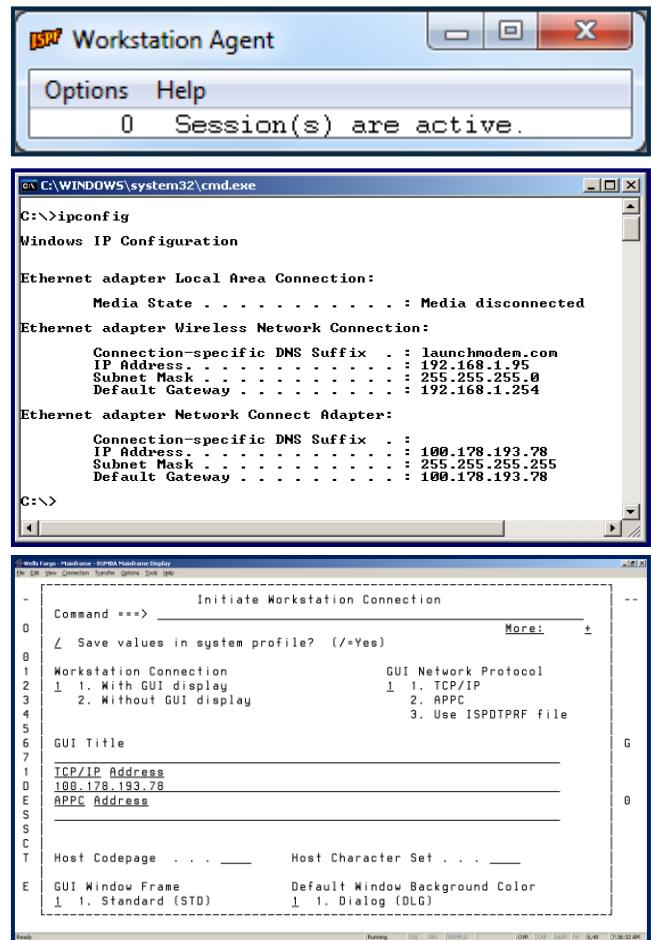

Install on PC

- Download the following PDS member into a Windows folder called “C:\ISPF” and add the extension ‘.EXE’
 - SYS1.SISPGUI(ISPGUINX)
- Double click on “C:\ISPF\ISPGUINX.EXE”
 - Type in “C:\ISPF” and click the “Install” button
 - Disregard the message and click the “OK” button
 - Click the “QUIT” button

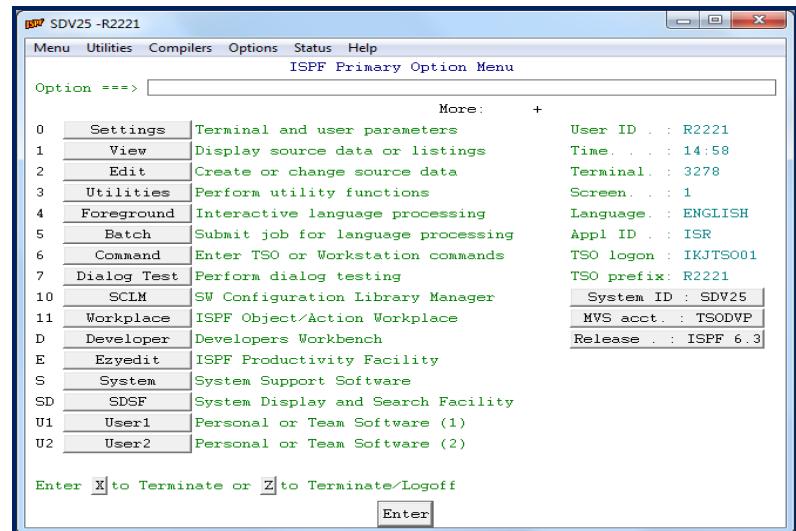

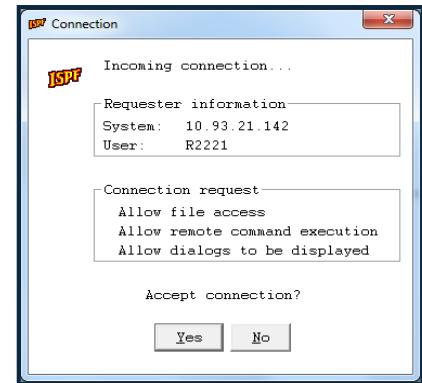

Activation

- Once installed, click on “[WSA.exe](#)”
- Obtain the workstation IP address
 - From Windows
 - Click “[Start](#)”
 - Select “[Run](#)”
 - Insert “[CMD](#)”
 - Type in “[IPCONFIG](#)”
- From ISPF type in “[WSCON](#)”
 - Type “[1](#)” for “[Workstation Connection](#)”
 - Insert “[TCP/IP Address](#)”

Activation

- Windows “Connection” screen will appear
 - Click the “Yes” button

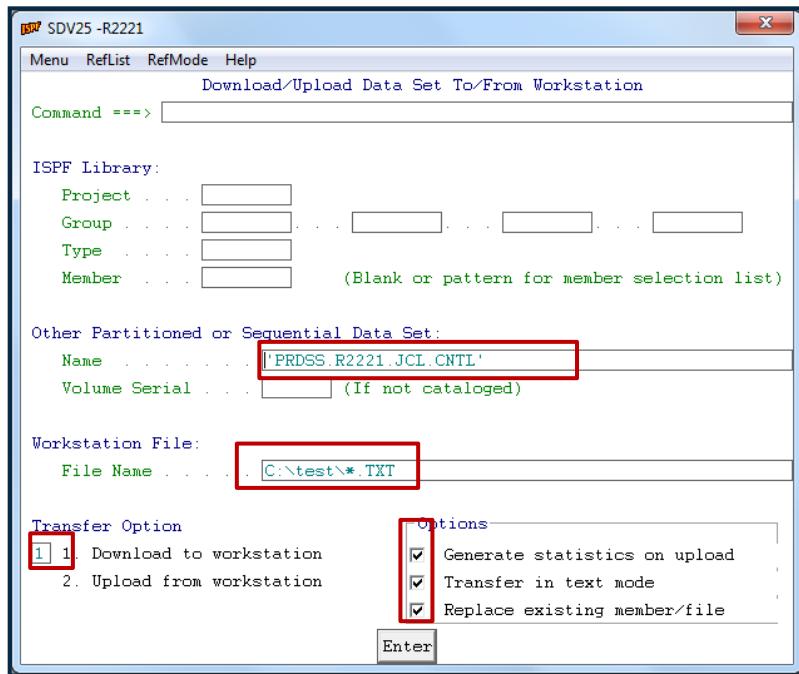

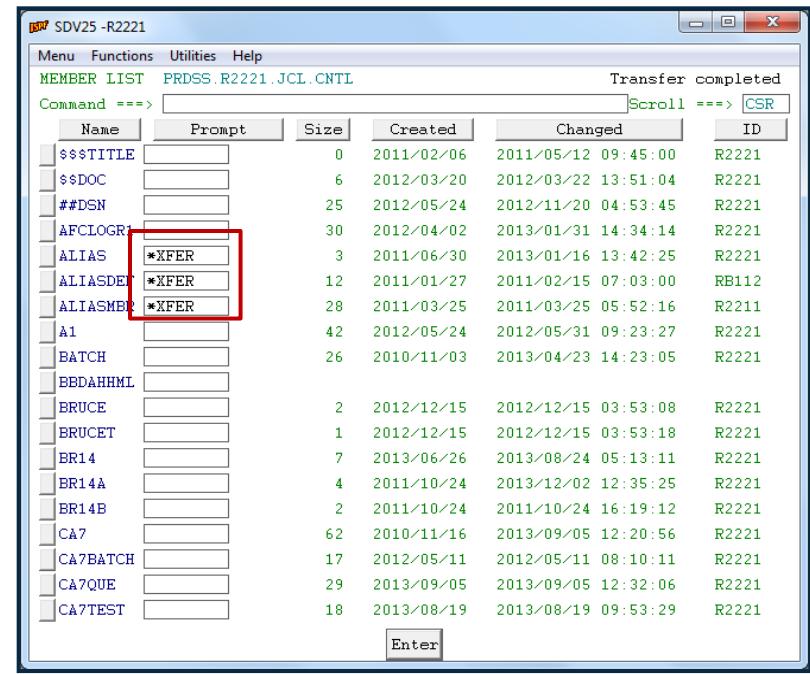

Commands

- **SPLIT** or **START** creates new GUI screen
- **SWAP LIST** display and select screen
- **SWITCH [3270|GUI]** between modes
- **WSDISCON** terminates GUI session

ISPF 3.7.2 – Transfer Files

- ISPF 3.7.2 is an easy way to transfer PDS members to a PC folder

The completed transfer operation resulted in the following list of transferred members:

Name	Prompt	Size	Created	Changed	ID
