Estimating Migration Effort
Summary
Introductions

• Who am I?
  • Michael MacIsaac
  • Product Manager for z/VM and Linux
  • mmacisaac@fdrinnovation.com

• Who are you?
  • An Innovation Data Processing customer?
  • An FDRPAS on z/OS customer?
  • A z/VM & Linux only shop?
  • z/VM SSI?
  • z/VM SMAPI configured?
Agenda

Introductions

Hierarchy of Availability

Business Continuation Tools

z/VM and z/OS Platform

Convergence

Estimating Migration Effort

Summary
Hierarchy of Availability

- Hierarchy of availability (lower to higher)
  - High Availability
  - Continuous Operations
  - Continuous Availability

Source: "High Availability Architectures For Linux on IBM System z" Version 2, June 15, 2010 by Steve Wehr, Scott Loveland and Harriet Morril of IBM
Tools in Your “Availability” Toolbox

- Resilient hardware with dynamic features
  - Mainframe, PR/SM, standby memory/CPUs, etc.
- Disk local mirroring and remote replication tools
- Resiliency z/VM and Linux features
  - Hot plugging memory, CPUs, file systems
- HA software
  - Oracle RAC, IBM WAS XD, IBM DB2 HADR, etc.
- Business continuance tools
  - z/VM 6.2+ SSI and LGR
  - Innovation FDRPAS for z/OS & FDRPASVM for z/VM
Agenda

Introductions

Hierarchy of Availability

Business Continuance Tools (on z/VM and Linux)

z/VM SSI and LGR

FDRPASVM non-disruptive migration

z/VM and z/OS Platform Convergence

Estimating Migration Effort

Summary
z/VM SSI and LGR

- Single System Image (SSI)
  - 2-4 z/VM “member” systems share and coordinate resources
  - This becomes an “SSI cluster”
- Live Guest Relocation (LGR)
  - Running Linux systems can move cross-LPAR or CEC
  - Memory and CPU are moved, but not disk
- Can eliminate planned outages

FDRPASVM

- Non-disruptively migrate DASD of running systems
  - Copies entire source volume(s) to target(s)
  - Monitors changed tracks on source volume
  - Copies changed tracks
  - Swaps all I/O operations to use target volume(s)
- GA in January 2014 for User Volumes
- Added migration of CP-owned volumes in October 2014
- Supports z/VM 5.4, 6.2 and 6.3
- Non-disruptively moves volumes to a new storage system
FDRPASVM Functions

- FDRPASVM supports migration of
  - Minidisk volumes (PERM)
  - Full-pack and DEDICATED volumes
  - CP-owned (must have two PAGE and two SPOOL volumes)
    - Page volumes can now be moved in parallel*
  - Smaller to larger volumes (ex: 3390-9 to 3390-27)
- FDRPAS functions
  - SIMSWAP – Simulate and validate main swap task
  - SIMSWAPMON – Simulate and validate monitoring updates
  - SWAPDUMP – Create point-in-time copy of volume(s)
  - SWAP – Copy and swap volume(s)
FDRPASVM Components

- **z/OS**
  - Copy, SWAP & Control
  - FDRPAS
    - Main
    - SWAP/COPY Task

- **z/VM**
  - Linux virtual machine
  - CMS FDRPAS command
  - FDRPASVM Service Machine
    - Main Thread
    - SWAP Monitor Thread

- **Online Source Volume A**
- **Free Target Volume A**

**Diagram Notes:**
- E P T I N T E R C E P T
- Online Source Volume A
- Free Target Volume A
FDRPASVM Component Detail

- **z/VM Components**
  - Track changes to source device and swaps to new unit
  - System requirements
    - Service machine (FDRPASVM) is running
    - Source volume is **online**
    - Target volume is **online** and **FREE**
  - Monitor program started with FDRPAS command
    - Start monitor on LPARs w/access to target volumes
    - Or vary volumes offline

- **z/OS Components**
  - Copies all tracks to target and recopies changed tracks
  - System requirements
    - Same source volume is **online**
    - Same target volume is **offline**
    - Invoke **FDRPAS** job using JCL or ISPF
FDRPASVM IS EASY TO INSTALL & USE

• 3 files:
  • CALCDASD EXEC – understand the environment
  • EXTRFDRP EXEC – unwind DISTPIPE (saves typing)
  • FDRPASVM.DISTPIPE – the product code

• 2 virtual machines:
  • PASMAINT – stores the binaries
  • FDRPASVM – FDRPAS service virtual machine

• 1 CMS command:
  • FDRPAS – with many subcommands
    • MONITOR TYPE SWAP
    • MONSTAT
    • STOP
FDRPASVM Setup

- Service machine (FDRPASVM) is running
- Logon to FDRPASVM interactively
  ```
  ... 
  DIAGNOSE 104 ALREADY DEFINED 
  ... 
  PASIUCSM020I WAITING FOR AN EVENT TO PROCESS 
  ```
- Start FDRPASVM on AUTOLOG1 191 disk (mode F)
  ```
  => x profile exec f
  ... 
  /***********************************************************************************/
  /* Customer processing can be added here */
  /***********************************************************************************/
  "CP XAUTOLOG TCPIP" /* Autolog TCPIP */
  "CP SET SIGNAL SHUTDOWN 300" /* Allow guests 5 min to shut down */
  "CP XAUTOLOG FDRPASVM" /* Start the FDRPASVM service machine */
  ...
FDRPASVM SWAPPING z/VM Volumes

- Example of swapping…
  Linux volume on rdev 1887 to B887
- Source volume is online
- Target volume is online and FREE
  - Use CP QUERY <rdev> and DETACH commands:

```
  => q 1887 b887
  DASD 1887 CP SYSTEM VM1887   2
  DASD B887 CP SYSTEM VMB887   0
  => detach b887 system
  DASD B887 DETACHED SYSTEM
  => q 1887 b887
  DASD 1887 CP SYSTEM VM1887   2
  DASD B887 VMB887
```
FDRPASVM - z/VM Monitoring

• Monitor target volume (e.g. from MAINT)
  • Access FDRPAS CMS command:
    
    ```
    'EXEC VMLINK PASMAINT 691'
    ...
    ```
  
  • Issue FDRPAS command for target volume:
    ```
    ==> fdrpas monitor type swap b887
    ...
    REQUEST ACCEPTED
    SEVERING IUCV CONNECTION
    ...
    * MSG FROM FDRPASVM: PASIUCSM009I 1 ELIGIBLE DEVICE(S) FOUND
    ```

• Watch console on FDRPASVM:
  ```
  ...
  PASMONVW080I DEVICE B887(B887) WAITING FOR SWAP INITIATION
  ```
FDRPAS z/OS View of z/VM Volumes

- Source volume should be **online**
- Target volume is **offline**
- Use DISPLAY and VARY commands

```
===> d u,,,1887
UNIT TYPE STATUS VOLSER VOLSTATE
  1887 3390 OFFLINE /RSDNT
===> d u,,,B887
UNIT TYPE STATUS VOLSER VOLSTATE
  B887 3390 OFFLINE /RSDNT
===> v 1887,online
IEE302I 1887 ONLINE
===> d u,,,1887
UNIT TYPE STATUS VOLSER VOLSTATE
  1887 3390 O VM1887 PRIV/RSDNT
```
Running FDRPAS on z/OS

- Invoke FDRPAS job in one of two ways:
  - *Using ISPF panels*
  - *From a JCL job:*

```plaintext
==> submit
//PASTEST1 JOB ('PR=YES'), 'ME', CLASS=M,
//   NOTIFY=ME
//******************************************************************************
 //*  FDRPAS                                                           *
//******************************************************************************
//** FDRPAS *
//******************************************************************************
//PASB EXEC PASPROC
//PAS.SYSIN DD *
*SIMSWAP TYPE=FULL, LARGERSIZE=OK, MAXTASKS=4, NONRESPONDING=FAIL
*SIMSWAPMON TYPE=FULL, LARGERSIZE=OK, MAXTASKS=4, NONRESPONDING=FAIL
*SWAPDUMP TYPE=FULL, LARGERSIZE=OK, MAXTASKS=32, NONRESPONDING=FAIL
SWAP TYPE=FULL, LARGERSIZE=OK, MAXTASKS=32, NONRESPONDING=FAIL
MOUNT VOL=VM1887, SWAPUNIT=B887
```
FDRPASVM Overview

- FDRPAS and FDRPASVM at a low level
  - Install z/VM “intercepts” to monitor source volume changes
  - z/OS main SWAP task copies source to target volume
  - FDRPASVM passes changes to z/OS main SWAP
  - z/OS main SWAP task recopies changed tracks
  - Uses z/VM HYPERSWAP when source and target are in sync
  - Target volume transparently becomes the source volume
  - Remove FDRPASVM intercepts
z/VM Output

• On z/VM virtual machine invoking FDRPAS command
  • Messages from FDRPASVM:
    ... 
    * MSG FROM FDRPASVM: PASMONVT_233I VMLAB63B (SERIAL# 04E2062818) ACKNOWLEDGES SWAP OF VOL=VM1887 AND JOINED IN SWAP OF UNIT=1887 TO B887
    * MSG FROM FDRPASVM: PASMONVT_241I FDRPAS SUCCESSFULLY COMPLETED SWAP OF VOL=VM1887 TO UNIT=B887
  • Query source and target devices after SWAP:
    => q 1887 B887
    DASD 1887 FDR3VM
    DASD B887 CP SYSTEM VM1887 2
FDRPAS z/OS Syslog Output

- JCL output (syslog)
  
  FDR233 CPUB (SERIAL# 02E2062818)
  ACKNOWLEDGES THE SWAP OF VOL=VM1887 - HTC 2107900 TO HTC 2107900
  
  FDR233 VMLAB63B (SERIAL# 04E2062818)
  ACKNOWLEDGES THE SWAP OF VOL=VM1887 AND HAS JOINED IN SWAP OF UNIT=1887 TO B887

FDR SUCCESSFULLY COMPLETED
Living up to “Non-disruptively Migrating z/VM and Linux Guests in Their Entirety”

• Customers tell us they are configuring SSI & LGR to:
  • Eliminate planned outages
  • Allow for non-disruptive hardware maintenance
  • Protect themselves against local disruption
  • Work during normal business hours

• FDRPASVM extends the scope of SSI & LGR objectives
  • While SSI & LGR are relocating memory and CPU…
  • FDRPASVM concurrently relocates z/VM & Linux disk storage
Living up to “in their entirety”

• A Linux running on LINUX154/SSI63B on DASD 189D

    # vmcp q userid
    LINUX154 AT SSI63B
    # vmcp q v 100
    DASD 0100 3390 VM189D R/W       10016 CYL ON DASD 189D SUBCHANNEL = 0000

    # ping vmlab2
    PING vmlab2.idp.com (192.168.250.17) 56(84) bytes of data.
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=1 ttl=60 time=0.545 ms ...
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=9 ttl=60 time=0.415 ms
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=10 ttl=60 time=0.668 ms ...
    --- at ping 10, started a SWAP JCL job of VM189D to 189E ---
    ...
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=11 ttl=60 time=0.521 ms
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=12 ttl=60 time=0.579 ms ...
    --- at ping 50 from MAINT on SSI63B did a "VMRELO MOVE LINUX154 SSI63A" ---
    ...
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=49 ttl=60 time=0.644 ms
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=50 ttl=60 time=0.610 ms
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=56 ttl=60 time=0.856 ms
    64 bytes from vmlab2.idp.com (192.168.250.17): icmp_seq=57 ttl=60 time=0.804 ms
Living up to “in their entirety” (cont’d)

--- at approximately ping 144, SWAP job completed
...
64 bytes from vmlab2.idpnj.com (192.168.250.17): icmp_seq=145 ttl=60 time=0.588 ms

Introductions
Hierarchy of Availability
Business Continuance Tools

z/VM and z/OS Platform Convergence

Estimating Migration Effort
Summary
Automating…

z/OS Job Submission from z/VM

- Drive z/OS JCL jobs from z/VM
- White paper describing how to:
  - Submit JCL job(s) from z/VM to z/OS
  - Using FILETYPE=JES mode of the z/OS FTP server
  - Using the VMFTP tool to process output from FTP
  - All in a single REXX “wrapper”
  - Second wrapper for multiple job submissions
- See http://www.fdr.com/Manuals_CurrentVersion/JCLfromVM.pdf
FTP Session Overview

- Submit JCL jobs through FTP
  
  ```
  ==> ftp zOS.ftp.server
  ftp> z/OS credentials
  ...
  ftp> site filetype=jes
  ...
  ftp> put myjob.jcl
  ...
  ftp> get <jobid>.x
  ...
  ftp> quit
  ```
SUBMIT EXEC

• **Wrap JCL job submission in a REXX EXEC**

```rexx
/* EXEC to submit a JCL job using the VMFTP tool */
Parse upper arg jobName .
If (jobName = '') Then Do /* no job name passed in */
    Say 'Error: expected parameter JobName not found'
    Return 1
End
'STATE' jobName 'JCL *' /* check that file exists */
if (rc <> 0) Then Do /* file not found => exit */
    Say 'Error: File' jobName 'JCL * not found'
    Return 2
End
'VMFTP FTPJOB (PARM' jobName /* Invoke the VMFTP macro */
```

© Copyright 2014 INNOVATION Data Processing. All rights reserved.
FTPJOB VMFTP

• Use VMFTP environment

/* VMFTP Macro to submit a JCL job and extract output */
Parse upper arg jobName . /* get the one argument */
system = 'myzos'       /* target z/OS system */
userID = 'myuserid'    /* z/OS user ID */
password = 'mypasswd'  /* password: case sensitive */
jobFile = jobName||'.JCL' /* input file */

'open' system        /* do the work */
userID               /* start the FTP session */
password             /* send the user ID */
'site filetype=jes'  /* send the password */
'put' jobFile        /* set server to JCL mode */
jobNumber = Word(output.4, 7) /* send the JCL job */
'get' jobNumber||'.X' /* get job # from output */
'quit'               /* retrieve the job output */
"quit"               /* end the FTP session */
View and Manage z/OS devices from z/VM

- **DUCB**
  - Send a job to z/OS and **Display UCB(s)**
- **VUCB**
  - Send a job to z/OS and **Vary UCB(s)** online or offline
- **QLABEL**
  - Query the label of DASD volumes and report
The DUCB EXEC

• The DUCB EXEC
  • Abstracts the z/OS Display UCB command
  • Creates a JCL job on the fly
• For example:

  ==> ducb 189c-189f
Displaying the state of 189C-189F
UCB 189C is OFFLINE
UCB 189D is OFFLINE
UCB 189E is ONLINE
UCB 189F is OFFLINE
The VUCB EXEC

- The VUCB EXEC:
  - Abstracts the z/OS Vary UCB online|offline command
- For example:
  ```
  ==> vucb 1893 offline
  Varying 1893 OFFLINE
  ==> ducb 1893
  Displaying the state of 1893
  UCB 1893 is OFFLINE
  ```
Agenda

- Business Continuance Tools
- z/VM and z/OS Platform
- Convergence

Estimating Migration Effort

Summary
Can You Estimate the Migration Effort?

FDRPASVM provides tools to help you determine…

• How much DASD space is on my systems?
  • CALCDAF EXEC reports on type and size of DASD

• Do my volumes have problem VTOCs?
  • QLABEL EXEC reports on VTOC types
## Number & Size of DASD Volumes Has an Impact on a Migration

<table>

CALCDASD EXEC

• CALCDASD EXEC
  • Needs no arguments if all DASD “belongs” to z/VM
    ==> calcdasd
  • Can take rdev-range if not all DASD “belongs” to z/VM
    ==> calcdasd 1880-1887
• Counts 3390-1s, -2s, -3s, -9s –As (EAVs) and “other sizes”
• Identifies CP-Owned, SYSTEM and ATTACHED disks
• Can report on free, offline and PAV alias devices
• Combination of Q DA, Q rdev, Q ALLOC and Q DA DETAILS
CALCDASD Help

==> calcdasd help

Are there volumes with problem VTOCs?

- DASD’s Volume Table of Contents (VTOC) can be:
  - z/OS-style VTOC starts on cyl 0, trk 1, rec 1 for 14 tracks
  - z/VM-style VTOC starts on cyl 0, trk 0, rec 5
  - Other (unknown)
- z/VM-style VTOC
  - tells z/OS “volume is full – don’t touch / don’t try to use it”
- z/OS-style VTOC… could lead to problems
  - may incorrectly tell FDRPAS the volume is not full
- Run a QLABEL EXEC health check to verify your volumes
Example of using QLABEL

=== att 4640-464e *
DASD 4640 ATTACHED TO MAINT 4640 WITH DEVCTL HYPERPAV BASE
...
DASD 464E ATTACHED TO MAINT 464E WITH DEVCTL HYPERPAV BASE

=== qlabel 4640-464e
Rdev Key  Label Volser VTOC
---- ---- ----- ------ ----
4640 VOL1 VOL1 VM4640 0000000005
4641 VOL1 FDR3 S11S01 0000000005
4642 VOL1 VOL1 VM4642 0000000005
...
464B VOL1 FDR3 S11P02 0000000005
464C VOL1 FDR3 S12S02 0000000005
464D VOL1 VOL1 VM464D 0000000101
464E VOL1 VOL1 VM464E 0000000005

z/VM VTOC pointers (0000000005) found: 14
z/OS VTOC pointers (0000000101) found: 1

  Please send me a copy of CALCDASD and QLABEL EXECs.
Testimonial… from a Large Financial Institution

Non-Disruptive Migration

“The business units requirements that rely on Linux volumes have made it very difficult for us to schedule outages to move their systems. FDRPASVM now allows us to move them non-disruptively like FDRPAS does for our z/OS volumes.”

A Large Financial Company
Backup/Restore of z/VM and Linux

- FDR ABR (Automatic Backup and Restore)
  - Now supports z/VM and Linux DASD
  - Simpler JCL
  - Backups can be stacked on multi-file tapes
  - Standardize z/VM and Linux backup with z/OS
Key Points

• FDRPASVM is unique – no other tool does this
• FDRPAS technology has a proven reliability record
  • Over 1700+ customer migrations since 2001
• FDRPASVM has helpful tools to:
  • Estimate the migration effort
  • Validate the environment
  • Manage the migration
• Supports concurrent processing:
  • Of many volumes
  • By many users
• You don’t have to bring z/VM or Linux systems down
Resources
