Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

SMF OA45637

- z/OS 1.12 and up
- CMSSMF lock contention during SMF data lost recovery processing may lead to delays in system/sysplex response time
- PTF: UA74438 to UA74440 (RSU1409)

RACF OA46194

- **z/OS 1.13**
- **New function APAR to streamline RACF Sysplex communication processing**
- **Note: this function is available in z/OS 2.1**
- **PTFs: UA75652 (tentatively RSU1503)**

VLF OA46301

- **z/OS 2.1**
- **Large MAXVIRT in COFVLFxx may stop caching for VLF class at IPL or after MODIFY VLF REPLACE command**
- **PTF: UA75351 (RSU1412)**

RTM OA47064

- z/OS 1.13 and 2.1
- PE APAR for UA75442/UA75443 (OA46028)
- After installation of these PTFs, ABEND can occur in VSM during IMS termination due to an overlay. The RTM PTFs contains no errors. The problem is actually caused by MQ PE UI11931 (PE APAR PI34742).
- PTFs: APARs are OPEN
