Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance,

compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

Notice Regarding Specialty Engines (e.g., zIIPs, zAAPs and IFLs):

Any information contained in this document regarding Specialty Engines ("SEs") and SE eligible workloads provides only general descriptions of the types and portions of workloads that are eligible for execution on Specialty Engines (e.g., zIIPs, zAAPs, and IFLs). IBM authorizes customers to use IBM SE only to execute the processing of Eligible Workloads of specific Programs expressly authorized by IBM as specified in the "Authorized Use Table for IBM Machines" provided at www.ibm.com/systems/support/machine_warranties/machine_code/aut.html ("AUT").

No other workload processing is authorized for execution on an SE.

IBM offers SEs at a lower price than General Processors/Central Processors because customers are authorized to use SEs only to process certain types and/or amounts of workloads as specified by IBM in the AUT.

IBM

Many Small Potatoes Can Make a Big Meal – Edition 2015A

- <u>z/OS V2.2:</u>
 - DFSMS: GDG Extended (GDGE)
- <u>z/OS V2.1:</u>
 - •DFSMS: PDSE V2 member generations
 - SDSF: System symbols on Filter
 - BCP: Parallel batch recall
 - Communications Server: TCP/IP profile syntax check
 - **ISPF:** Configuration Utility new option for keyword file
 - **ISPF:** Swapbar enhancements
- <u>z/OS V1.13</u>:
 - **BCP:** COPYCNT= for printing a lot of copies
 - -z/OS UNIX: script command
 - •DFSMSdfp: IGGCATxx parmlib member
 - •DFSMSdss: Standalone ICKDSF no longer needed...
- <u>z/OS V1.12</u>:

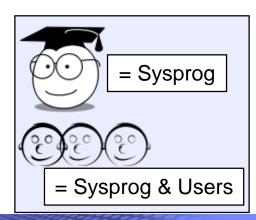

3

- •BCP: ALLOCxx for unique temp data set names
- Older than the hills:
 - •z/OS UNIX: skulker

z/OS V2R2 Small Enhancements

ඔවුව ◆DFSMS: GDG Extended (GDGE)

4

z/OS V2R2 Enhancements DFSMS: GDG Extended (GDGE)

- What: Today, the limit on number of GDGs is 255 (1 byte catalog field GDGLIMIT): "classic GDG". Now, you can indicate you want to use GDGE, which supports 999 generations.
 - A new 2 byte catalog field name **GDGLIMTE** is used to hold the new maximum, 1 to 999.
 - Can have one generation for every day of the year, for more than 2 years!

How to use:

- 1. Position for exploitation of GDGE.
- 2. Ensure capability is enabled.
- 3. Define a GDGE and use at will!

Considerations:

- –Use when you are confident there will be no fall back from z/OS V2.2.
 - GDGEs are not allowed to be accessed pre-z/OS V2.2.
- -PDSEs can be GDGs since z/OS V2.1 (and GDGEs)

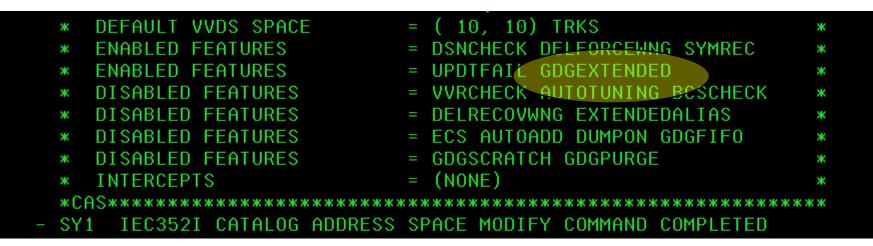

- How to use: 1. Position for exploitation of GDGE.
 - For applications that may have referred to **GDGLIMIT** they now should understand to look at **GDGLIMTE** when GDGEs are in use (or even not in use).
 - Query **GDGATTR** bit (new bit, existing field)*:
 - If set, use GDGLIMTE as you have a GDGE. (GDGLIMIT will have no value).
 - If not set, use GDGLIMIT or GDGLIMTE.
 - Generic Tracker can help! Turn it on, and look for instances of using **GDGLIMIT** and not using **GDGLIMTE** on a Catalog Management call.
 - Might indicate that the program cannot understand GDGEs.
 - Instances of interest are those starting with "GDGLIMIT", owner is "IBMDFSMS".
- * GDGATTR fields are documented in z/OS DFSMS Managing Catalogs.

z/OS V2R2 Enhancements DFSMS: GDG Extended (GDGE)

- How to use: 2. Ensure capability is enabled.
 - GDGE use is controlled in IGGCATxx with GDGEXTENDED (YES | NO)
 - F CATALOG, REPORT

Considerations:

7

-If you want to dynamically enable GDGE, update your IGGCATxx with GDGEXTENDED (YES) then F CATALOG, RESTART

z/OS V2R2 Enhancements
DFSMS: GDG Extended (GDGE)

- How to use: 3. Define a GDGE and use at will!
 - GDGE has to be defined as EXTENDED

жжжжжжжжжжжжжжжжжжжжжжжжжжжж ТОР OF DATA жжжжжжжжжжжжжжжжжжжжжжжжжж	******

z/OS V2R1 Small Enhancements

SDSF: System symbols on Filter

- ***BCP:** Parallel Batch Recall
- CommServer: TCP/IP Profile Syntax Check

ISPF: Configuration Utility new option for keyword file

= Sysprog & Users

ISPF: Swapbar Enhancements
= Sysprog

90

 What: You can have multiple levels (generations) of a PDSE V2 member. Nice for saving archives of members, or recovering a member when needed.

• How to use:

- 1. Ensure capability is enabled.
- 2. Indicate on allocation you want to use member generations.
- 3. Save, delete, recall, ... the member generation you want.

Considerations:

Current is always generation "0" = "primary generation"

Example:	Absolute	Relative				
Current	0	0				
One before	3	-1				
Two before	2	-2				
Three before	1	-3				

How to use: 1. Ensure capability is enabled.

 In IGDSMSxx, ensure that MAXGENS_LIMIT is greater than 0 (default). Can have two billion generations! If you use the default, you cannot use PDSE V2 member generations.

	Allocate	New Data Set	Value out of range
Command ===>			
			More: -
Secondary quantity Directory blocks . Record format Record length Block size Data set name type Data set version . Num of generations Extended Attributes Expiration date	15	(In above units)	
Directory blocks .	10	(Zero for sequentia	l data set) 🛪
Record format	FB		
Record length	80		
Block size	32720		
Data set name type	LIBRARY	(LIBRARY, HFS, P/	ARGE, BASIC, *
Data set version .	2	EXTREQ, EXTPR	plank)
Num of generations	<u>1</u> 5		
Extended Attributes			
Expiration date	Number of gene	rations value must r	ange from 0 to the
Enter "/" to select	current system	defined maximum of	0
Allocate Multiple			
		or blank)	

 Make sure you are allocating a PDSE V2, either by default in IGDSMSxx with PDSE_LEVEL(2) (default is 1).

Considerations:

 PDSE V2 can be only be created on z/OS V2.1. Lower systems can read and write them, they cannot allocate them though.

How to use: 2. Indicate on allocation you want to use

In ISPF 3.2 allocation:

• With TSO:

Enter TSO or Workstation commands below:

==> alloc f(pdsev2) da('mwalle.tps.reports') new lrecl(80) recfm(f b) space(50
50) cyl dsorg(po) dsntype(library 2) maxgens(3)_

How to use: 3. Save, delete, recall, ... the member generation you want.

 When editing a primary generation, a SAVE will create a new generation member. Also, SAVE NEWMEM will create a new generation. SAVE NOGEN will not create a new generation. PF1 tells you the generation:

EDIT Command		EPORTS(JANUARY) - 01	. 07 Mer	nber JANUARY saved Scroll ===> HALF
*****	****** * *********	кжжжжжжжжжжж Тор оf	Data жжжжжжжжжж	******
000001	JANUARY 8, 2019	5 EIGHTH REPORT:		
000010				
000100	Release	Modification	Division	Division
000200	Number	Level	Acronym	Number
000300				
000400	9	0	DSD	26
000500				
000600				
000700 _				
00800	Program	Туре	PPL D	istributed By
000900			_	
001000	SP PP PO	PRPQ SIPO CPO (SPO	C ISMD SPC ISMD	SPC Vendor*
	JANUARY, generated for SAVE.	tion 0, saved in MWAI	LLE.TPS.REPORTS, N	NEWGEN parameter

 To edit a prior generation, use "/" in the PROMPT column on DSLIST, default is primary generation:

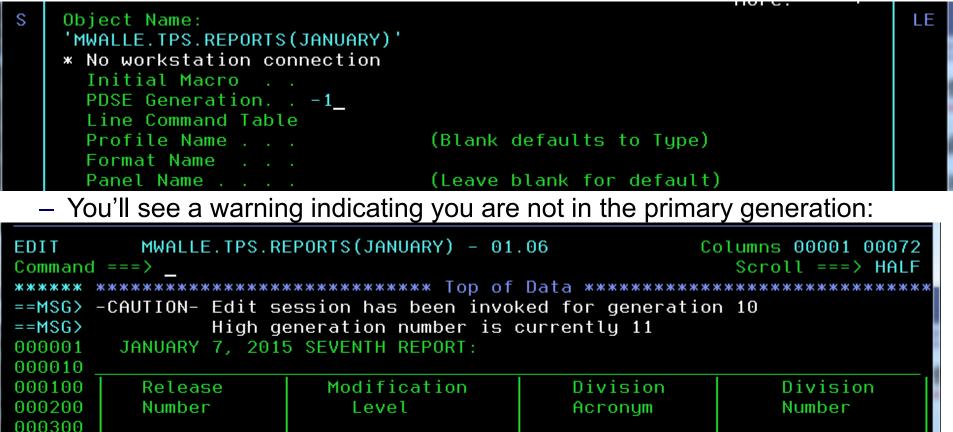

EDIT		MWALLE.TPS.	REPORTS		Row 0000001 of	0000001
Command	===>				Scroll ==	=> HALF
	Name	Prompt	Size	Created	Changed	ID
S	JANUARY **End**	/_	17	2015/01/24	2015/01/24 21:05:28	MWALLE

Ω

Continued:

- Then say which generation you want (either absolute or relative):

DSD

26

000400

q

Usage considerations:

- Having generations mean you need more space in the PDSE.
- Deleting a member from ISPF, means deleting all its generations too.
- tso delete `mwalle.tps.reports(january)' will delete the primary generation, and leave the other generations orphaned and non-retrievable with ISPF.
- IEBCOPY and IDCAMS REPO only copy primary generation (no other generations). DFSMSdss dump and restore, and copy will keep all member generations (includes DFSMShsm backups) install OA43729.
- More can be found on TechDocs: <u>WP102465</u>

Suggestion!

- IBM Data Set Commander for z/OS V8.1 and APAR OA45103 (formerly known as IBM ISPF Productivity Tool for z/OS) contains more enhancements for PDSE member generations!
 - Including the very nice ability to display all member generations, which is not in ISPF.

	L1	- MWAL	LE.TP	S.REPORTS			-ROW 00001 OF SCROLL ===>

END								

- What: You can add dynamic and static system symbols on the filtering ability. Particularly useful when you have values you want to filter on consistently, and those values change: today's date, system you are logged on, ...
- How to use:
 - **FILTER** ? pop-up lets you set the filters and their values.
 - Press PF4 on the value column, and you can see the system symbols and their current value. Select one that fits your fancy! (You can concatenate the symbols too.)

Considerations:

 As always, careful with the date when filtering. "EQ" may not give you want you want, but "GE" probably will.

My goal: On my held jobs, I only want to see jobs I own (MWALLE), and jobs that were created today (22 Jan 2015).

z/OS V2R1 Enhancements BCP: Parallel Batch Recall

- What: The ability to recall all migrated data sets in the job step in parallel.
 - Legacy behavior is to recall any migrated data sets serially at the job step.
 - By recalling the data sets in parallel, you can reduce the delay for other jobs to use that initiator. This allows better parallelism of batch execution.

How to use:

- SETALLOC SYSTEM, BATCH_RCLMIGDS=PARALLEL
 - **PARALLEL** or **SERIAL** are the options.
 - **SERIAL** is the legacy option, for data set-by-data set recall, the default.
- ALLOCxx parmlib member: SYSTEM BATCH_RCLMIGDS (PARALLEL)

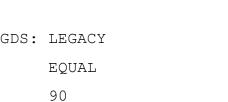

Considerations:

- May dynamically change this system-wide setting.
- Notice the syntax structure difference between the command = and the statement ().
- Notice that you may (or may not) send many recall requests in bursts. SYSZTIOT contention is not impacted.

z/OS V2R1 Enhancements CommServer: TCP/IP Profile Syntax Check

- What: Verify the syntax of profile configuration statements without affecting system.
 - You can use this command on any TCP/IP stack that is the same release as the profile statements in the profile data set for consistency, without regard to what is currently in use on that stack.
 - That stack doesn't necessarily have to be the one that will use the profile. But, if you are verifying system symbols, direct the command to the stack that you intended to use for consistent resolution.
 - Use this before activating the TCP/IP profile, or using the VARY TCPIP, , OBEYFILE command.
- How to use:
 - VARY TCPIP,, SYNTAXCHECK, dsname
 - Can direct the command to specific TCP/IP address space with: VARY TCPIP, procname, SYNTAXCHECK, dsname
 - *dsname* must be a cataloged sequential data set or PDS(E) member
 - Need CONTROL access to MVS.VARY.TCPIP.SYNTAXCHECK in class OPERCMDS
- **Considerations:** Because no updates are done, the command cannot detect or report conflicts with what is currently in use.
 - Duplicate interfaces or deleting a non-existent interface cannot be detected.
 - Keep running the syntax check until it has a clean result, as it may stop after the first syntax error.

ISPF: Configuration Utility new option for keyword file

z/OS V2R1 Enhancements

ISPF: Swapbar enhancements

- What: Swapbar (since z/OS R10) is nice for point-and-shoot session navigation, however it can get "lost" on a busy panel. z/OS V2.1 allows you to customize the swapbar so you can make it easier to notice, with:
 - a divider line
 - session coloring and hilighting, for current and other sessions
- How to use:
 - swapbar / gives you the tailoring displays
- **Considerations:** current session can be customized differently from the other sessions. Settings are saved in the user's profile.
 - Remember: * means current, and means alternate.

```
Before z/OS V2.1:
```

```
Specify the name of the CSI that contains the global zone:
   SMPCSI DATA SET ===> 'MVSBUILD.ZOS21.CSI'
(Leave blank for a list of SMPCSI data set names.)
```

ISR@PRIM UDLIST *GIM@PRI -DSLIST

M<u>A</u>

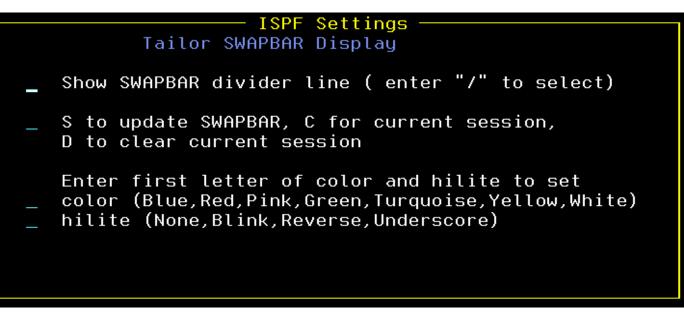

В

02/007

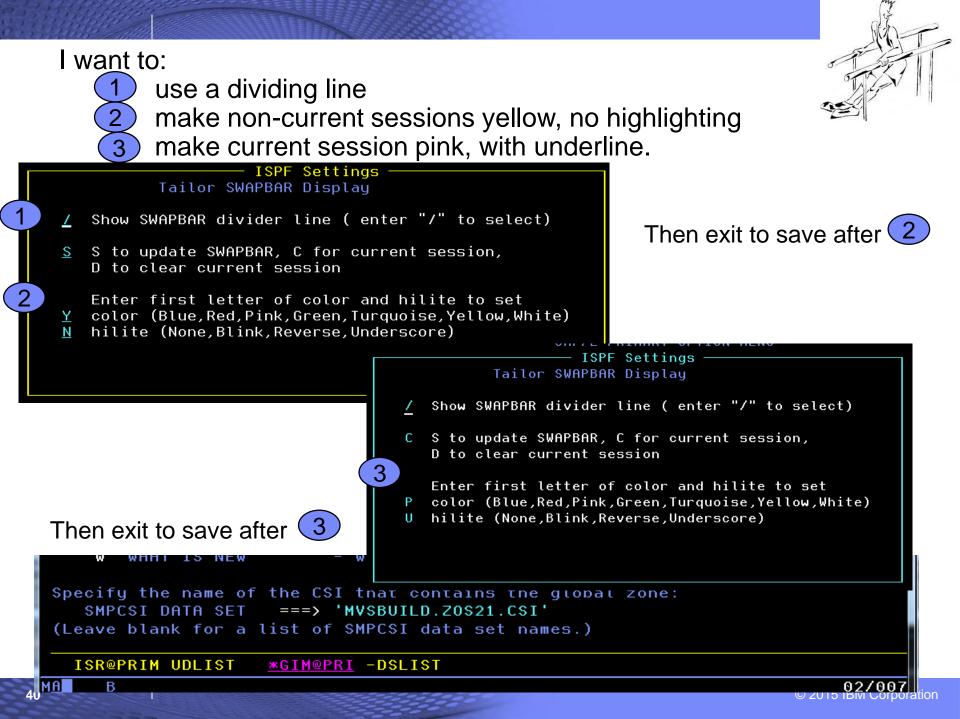

Connected to remote server/host plpsc.pok.ibm.com using lu/pool M05TC1 uspokl58-A39-01-710-Poughkeepsie on uspokl58

With z/OS V2.1: swapbar /

- S: the whole swapbar to use the settings
- C: only the current screen to use the settings
- D: delete the settings for the entire swapbar
- Then, color and hilighting are what to use for the S or C selection.

z/OS R13 Small Enhancements

BCP: COPYCNT= for printing lots of copies

@@@@ &z/OS UNIX: script command

DFSMSdfp: IGGCATxx parmlib member

***DFSMSdss:** Standalone ICKDSF no longer needed for initialization on RESTOREs

z/OS R13 Enhancements BCP: COPYCNT= for printing a lot of copies

- What:
 - If you wanted a lot of sysout data set copies printed, the COPIES= parm on the OUTPUT JCL statement was limited το 255.
 - For 5,100 copies, you might create 20 **OUTPUT** statements!
 - Use the new parameter, **COPYCNT**=. You can specify 0-2,147,483,647 copies of output to be produced.
- Considerations:
 - COPYCNT= takes precedence over COPIES= if both are specified.
 - COPIES=(nn, (xx, yy, ...)) has the option for group numbers that COPYCNT= doesn't have. This allows you print some pages multiple times. COPYCNT= is best for "simple" copies.

z/OS R13 Enhancements BCP: COPYCNT= for printing a lot of copies

• How to use: Replace COPYCNT= instead of COPIES= . Clean out any extraneous OUTPUTs.

> 000009 //OUT1 OUTPUT COPYCNT=5100 000010 //SYSUT2 DD SYSOUT=C,OUTPUT=(*.OUT1)

• See it in SDSF:

	JOB DATA AND INPUT		ISPLAY - S	JOB BIGPRI	INT (JOB00	9034)	L	INE 1-5 (5) SCROL		•> HALF
NP	DDNAME	-Time	TRd-Date	TSt-Time	TSt-Date	RecFM	W	OCopyCnt I	RecL	StepNum

z/OS R13 Enhancements z/OS UNIX: script for command

- What: A shell command for keeping track in a file of what has been displayed on a terminal.
- Excellent for logging what has occurred during an interactive configuration (like z/OSMF's izusetup) for later review!
- How to use: script [-aq] [file]
 - Where –a will append to the file, -q will not add diagnostic message. The default file name is typescript in the current directory.
 - Use exit to stop the recording into the file.

Considerations:

- Commands that modify the terminal (like full screen editors) might produce unexpected data.
- Don't access the script file while recording to it.
- If you can see the data on the terminal, you can see the data in the file. Be aware of file permissions on the script file!

Script command is started on Thu Jan 29 14:57:25 2015. [/u/mwalle]./izusetup.sh -file /etc/zosmf/aqhozosmf.cfg -finish

IZUG090I: Environment variable "IZU_CODE_ROOT" has been set to the default value "/usr/lpp/zosmf/V. IZUG091I: Environment variable PATH is set to the value "/u/mwalle:/bin:/usr/sbin:/usr/lpp/java/J6.0/k IZUG091I: Environment variable _BPX_SHAREAS is set to the value "YES".

IZUG090I: Environment variable "JAVA_HOME" has been set to the default value "/usr/lpp/java/J7.0_64"

...and the bottom of the file:

IZUG023W: An unexpected error has occurred while attempting to verify plug-in: "Incident Log". IZUG223I: For more information, review log file "/var/zosmf/configuration/logs/izusetup_finish.01.2!

IZUG011I: Completed z/OSMF setup procedure on Thu Jan 29 15:01:16 EST 2015.

IZUG210I: The script "./izusetup.sh" has completed. [/u/mwalle]:>exit Script command is complete on Thu Jan 29 15:01:29 2015.

z/OS R13 Enhancements **DFSMSdfp:** IGGCATxx parmlib member

- What: Specify catalog options in a parmlib member
 - Allows more catalog options to be specified than LOADxx (only have 72 columns there!)
 - Relief from having to do an F CATALOG after IPL
 - If used, then parameters have precedence over LOADxx and SYSCATxx
 - Default is IGGCAT00.
- How to use:
 - **IEASYSxx** CATALOG=(xx, yy, ...) will indicate which IGGCATxx parmlib members to use
 - /* comments */ are allowed between parameters
 - If duplicate parameters are given, last one will be used, in the later member.

Considerations:

- Defaults are used if no catalog specifications are given.
- Parmlib members will be used if doing a CAS restart (except for TASKMAX)
- If IEASYSxx CATALOG= isn't specified, IGGCAT00 will be used. If IGGCAT00 cannot be found, then this message will appear at IPL:
 - IEA3011 IGGCAT00 NOT FOUND IN PARMLIB

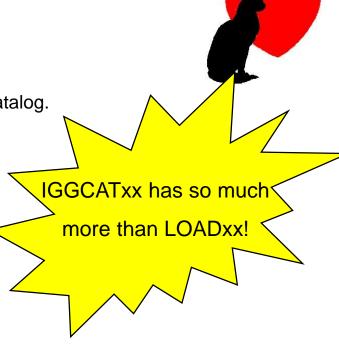

parmlib member

LOADxx SYSCAT statement:

Column Contents

- 1-6 SYSCAT
- 10-15 The volume serial of the device that contains the master catalog.
- 16 If SYS% to SYS1 conversion is active → SYS%
- **17** Alias name level of qualification → ALIASLEVEL
- **18-19** CAS service task lower limit → TASKMIN(nnn)
- **20-63** The 44-byte data set name of the master catalog.
- 64-71 HLQ of the tape volume catalog → TAPEHLQ
- 72 Enable AUTOADD → AUTOADD

IGGCATxx parameters:

resource(minutes,action)	DSNCHECK(YES NO)	NOTIFYEXTENT(percent)	TASKTABLESIZE(nnn)
ALIASLEVEL(n)	DUMP(ON OFF) DUMPON(<i>rc</i> , <i>rsn</i> , <i>mod</i>)	SYMREC(YES NO) SYS%(ON OFF)	UPDTFAIL(YES NO) VVDSSPACE(<i>primary</i> , <i>sec</i>
AUTOADD(ON OFF)	DUMPON(<i>rc</i> , <i>rsn</i> , <i>mod</i> , <i>cnt</i>)	TAPEHLQ(name)	ondary)
CATMAX(nnnn)	EXTENDEDALIAS(YES N O)	TASKMAX(<i>nn</i>) TASKMIN(<i>nnn</i>)	VVRCHECK(YES NO)
DELFORCEWNG(YES NO)	GDGFIFOENABLE(YES N		
DELRECOVWNG(YES NO)	O)		

z/OS R13 Enhancements:

DFSMSdss: Standalone ICKDSF no longer needed for initialization on RESTOREs

- What: Previously, for a "very first environment" (for DR, new systems,...) you
 might have had a tape with:
 - File 1: Standalone ICKDSF, to initialize the volumes to be restored.
 - File 2: Standalone DFSMSdss, to restore the volumes needed to IPL

First step: IPL standalone ICKDSF and initialize the volumes to be restored.

Second step: IPL standalone DFSMSdss

Third step: Restore the volumes needed to IPL z/OS.

Fourth step: IPL z/OS and run remaining RESTOREs in batch, in parallel

- As of z/OS R13, standalone DFSMSdss no longer requires a prior initialization of the volumes (the First Step)
- You can specify NOVERIFY on RESTORE to tell Standalone DFSMSdss not to read the volume label
- Therefore, ICKDSF no longer needs to be used ahead of time to initialize the volume!

z/OS R13 Enhancements: DFSMSdss: Standalone ICKDSF no longer needed for initialization on RESTOREs

- How to use:
 - Standalone DFSMSdss (at or above the z/OS R13 level) can be File 1.
 - Don't necessarily need Standalone ICKDSF. Only need Standalone ICKDSF if you don't want to use NOVERIFY, and want have the target volume verified.
 - New sequence could then be:

<u>First step</u>: IPL standalone DFSMSdss (File 1)

Second step:

RESTORE FRMDV (TAPE) FRMADR (nnn) TOADR (nnn) NOVERIFY Repeat as needed

<u>Third step</u>: IPL your z/OS system from the restored volumes

Considerations:

 R13 Standalone DFSMSdss can be used to RESTORE dumps taken with lower levels of DFSMSdss

z/OS R12 Small Enhancements

Second Second

z/OS R12 Enhancements BCP: ALLOCxx for unique temp data set name

- What: It might be possible for jobs executing at the same time with the same jobname (when JES allows it) fail allocation with a duplicate data set name error.
- To avoid this possibility, use the ALLOCxx TEMPDSFORMAT=UNIQUE option.
 - Ensures that jobs with the same jobname running simultaneously do not create temporary data sets with the same names.
 - -The previous behavior is **INCLUDELABEL**, and is the default.
 - -Can change dynamically with **SETALLOC**
- Temporary data set names will change when using the UNIQUE option, only if you had specified a dsn label (e.g. &&MWTEMP).
 - -In the JCL, all references to the dsn label would correctly refer to the same data set.

z/OS R12 Enhancements BCP: ALLOCxx for unique temp data set name

- The naming convention:
 - -As always, under any option, all temporary data set names start with: SYSyyddd.Thhmmss.RA000.jjobname
- If you do <u>not</u> specify a data set name, or TEMPDSFORMAT (UNIQUE) is in effect, the full format of the temporary data set name is: SYSyyddd.Thhmmss.RA000.jjobname.Rggnnnn
- If you <u>do</u> specify a data set name and TEMPDSFORMAT (INCLUDELABEL) is in effect, the full format of the temporary data set name is: SYSyyddd.Thhmmss.RA000.jjobname.dsetname.Hgg

z/OS R12 Enhancements

BCP: ALLOCxx for unique temp data set name

000004 //* TEMPORARY DSN WITH A LABEL 000005 //DD1 DD DSN=&&MWTEMP,DISP=(NEW,PASS), 000010 //* TEMPORARY DSN WITHOUT A LABEL_ 000011 //DD2 DD DISP=(NEW,PASS),

- Default, old way, INCLUDELABEL:
 - With dsn: SYS15029.T210214.RA000.IBMUSERT.MWTEMP.H01
 - This is the case that is affected when changing this option. The dsn (&&MWTEMP) is not present when moving to UNIQUE.
 - Without dsn: SYS15029.T210214.RA000.IBMUSERT.R0100011
 - Same as with **UNIQUE.** No change here.
- New way, UNIQUE:
 - With dsn: SYS15029.T214532.RA000.IBMUSERT.R0100014
 - Note, all references to "& &MWTEMP" work fine. No JCL changes were done!
 - Without dsn: SYS15029.T214532.RA000.IBMUSERT.R0100015
 - Same as with **INCLUDELABEL.** No change here.

Older than dirt on potatoes **Small Enhancements**

@@@ *z/OS UNIX: skulker

Older than the hills: z/OS UNIX: skulker

- What: Allows you to clean out old files in a directory, based on last access time and location.
 - skulker is a sample shell script provided in /samples/.
 - You may copy it to /bin, /usr/bin, /usr/sbin/ ... and modify it as you see fit.
 - /tmp/ is an ideal location to use skulker on
- How to use:

- /samples/skulker -i -l /u/mwalle/myskulk.log -R /u/mwalle/tmp/ 365

where some of the options are:

- -i interactively ask about files or directories that will be deleted.
- –1 log the deleted files, warning, errors
- R recursively moves through dirs and delete dirs and files, -r recursively moves through dir and deletes files
- **Considerations:** skulker with cron is a great combination!
 - Don't use -i from cron. If used from cron, nothing will be deleted.

Older than the hills: z/OS UNIX: skulker example

EDIT /AQTS/var/spool/cron/crontabs/MWALLE Command ===>	Columns 00004 00075 Scroll ===> HALF

Summary of What We Might Want to Share with Our User Community:

- System Programmer & User Items:
 DFSMS (V2.2): GDG Extended (GDGE)
 DFSMS (V2.1): PDSE V2 member generations
 SDSF (V2.1): System symbols on Filter
 ISPF (V2.1): Swapbar enhancements
 BCP (R13): COPYCNT= for printing lots of copies
 z/OS UNIX (R13): script command
 z/OS UNIX (old): skulker
 - System Programmers' Items:

ISPF (V2.1): Configuration Utility new option for keyword file
BCP (V2.1): Parallel Batch Recall
CommServer (V2.1): TCP/IP Profile syntax check
DFSMS (R13): IGGCATxx parmlib member
DFSMS (R13): Standalone ICKDSF not needed for s/a restores
BCP: ALLOCxx for unique temp data set name

z/OS Little Enhancements: Many Small Potatoes Can Make a Big Meal Summary

• <u>z/OS V2.2:</u>

•DFSMS: GDG Extended (GDGE) Can have 999

<u>z/OS V2.1:</u>

- •DFSMS: PDSE V2 member generations Very handy.
- •SDSF: System symbols on Filter Use the pop-up for symbol names
- BCP: Parallel batch recall Speed up those batch jobs.
- •Communications Server: TCP/IP profile syntax check For every update.
- •ISPF: Configuration Utility new option for keyword file Nice option.
- •ISPF: Swapbar enhancements Pretty it up.
- <u>z/OS V1.13</u>:
 - **BCP: COPYCNT= for printing a lot of copies** For >255 copies.
 - •z/OS UNIX: script command Save it for review later.
 - •DFSMSdfp: IGGCATxx parmlib member Very convenient and maintainable.
 - •DFSMSdss: Standalone ICKDSF no longer needed... One less thing to do.
- <u>z/OS V1.12</u>:

•BCP: ALLOCxx for unique temp data set names You might need this one day.

Older than the hills:

•z/OS UNIX: skulker Keep a tidy file system.
