Discussion Topics

- “Needs” in mainframe tape
 - Past to present... small to big?
- How Have “Needs” Affected Technology?
- The next evolutionary steps
- Use cases
- What’s the next “Need”?

“Needs” in Mainframe Tape

Did Technology Define Needs, or Did Needs Define Technology?

- Physical tape
 - Better recording technologies (3480, 3490, 3590)
- Robotics (automated tape loading)
 - Dual robotic arms
 - Higher slot counts
- Virtual tape (disk cache with physical tape back store)
 - Replication of disk cache
- Encryption
- Tapeless (no physical tape)
 - Deduplication
 - GRID
 - Synchronous replication
 - Cloud storage

How Have “Needs” Affected Technology?

Technology

- Physical tape
- Robotics
- Virtual tape
- Encryption
- Tapeless

Effects

- Performance
- Capacity
- Media utilization
- Data Security
- Host devices
- RPO/RTO capabilities
- Copy creation
 - Number of copies
 - Number of locations
- Operational accessibility
- Impact of equipment failure
- Impact of media failure

How Have “Needs” Affected Technology?

Technology

- Physical tape
- Robotics
- Virtual tape
- Encryption
- Tapeless
- **Synchronous Tape Matrix**

Effects

- Performance
- Capacity
- Media utilization
- Data Security
- Host devices
- RPO/RTO capabilities
- Copy creation
 - Number of copies
 - Number of locations
- Operational accessibility
- Impact of equipment failure
- Impact of media failure

Synchronous Tape Matrix (STM)

- Continuous Availability
 - Resilient architecture instantly and automatically adjusts to multiple failures without interruption
 - Data is always available for I/O
 - No downtime from failover or restore processes
- No idle components to buy
 - All components contribute to day-to-day operations, not just during failure events
- Easy to implement
 - No host scripts or policies required
- Scalable
 - No limitations for throughput, capacity or degrees of redundancy
- Modular design ensures investment protection
- Supports dissimilar storage systems and compression/deduplication technologies

Simplified STM Configuration with n -Sites

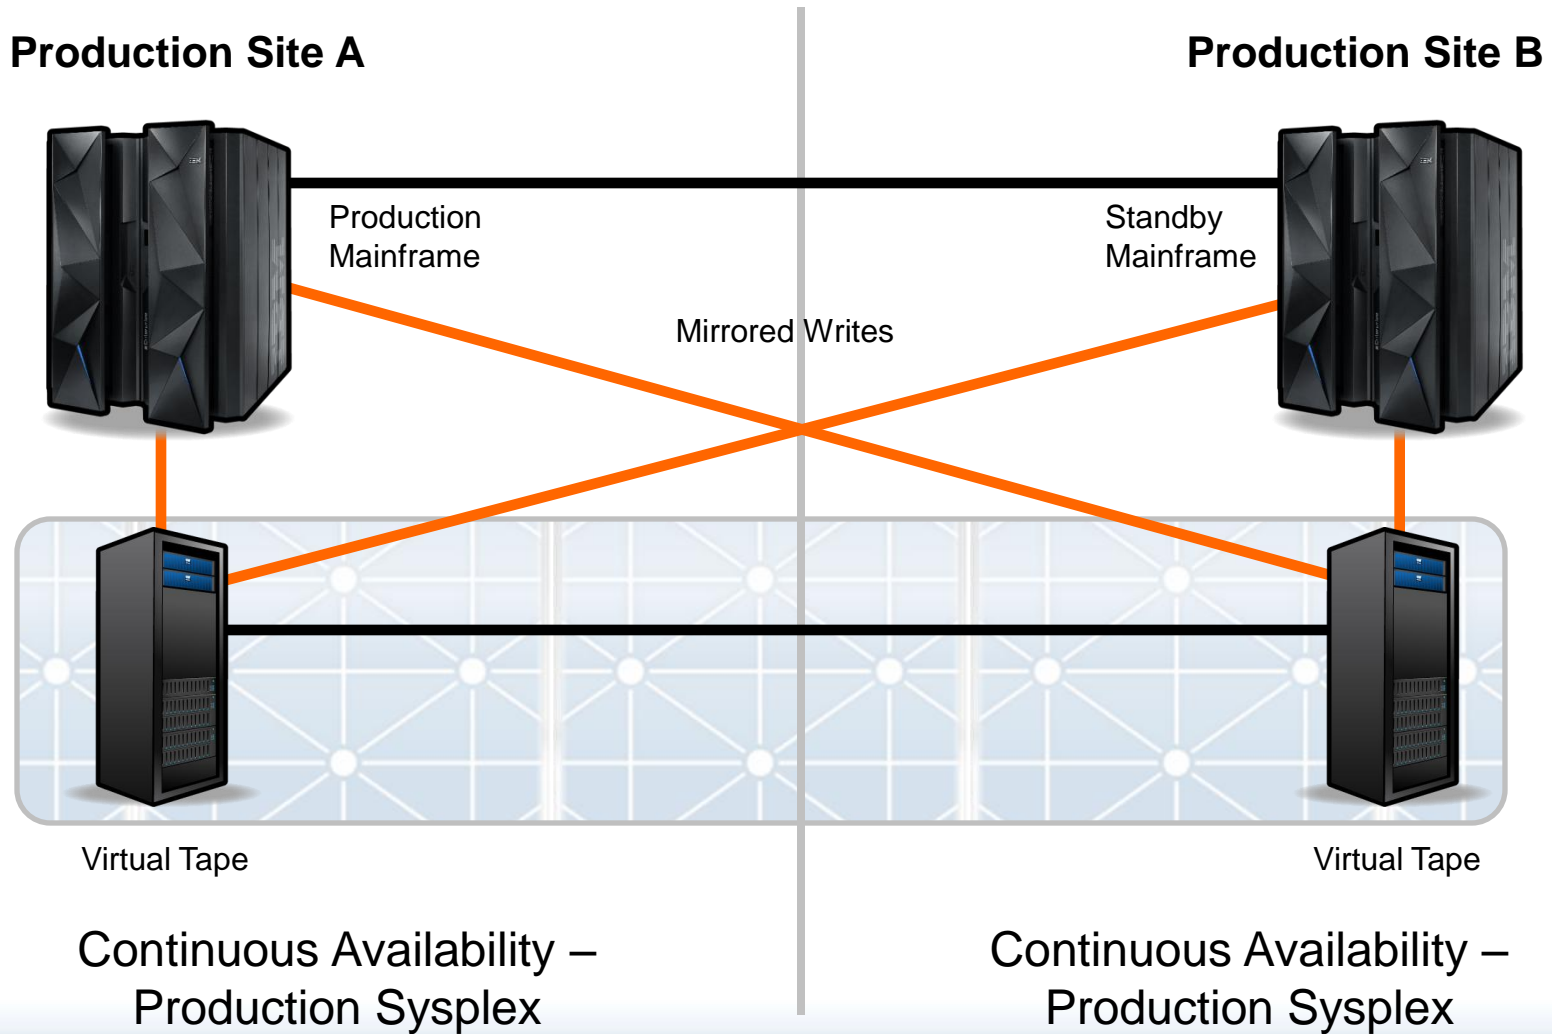

Operational STM Configuration with Multiple Failures Across Layers and Sites

Continuous Availability – Single Site

Prepare for the Future, Don't Forget About the Past

- Disaster recovery preparedness
- Security (Encryption)
- Migrations

RepMon: Replication Monitor

Provides **real-time status monitoring and logging** of virtual tape data writes and replication to a remote disaster recovery site at the VOLSER level

- Identifies Write and Replication Status of Mainframe Tape VOLSERs
- Identifies if virtual tape data at DR is still consistent with the primary datacenter
- Provides visual and audit capabilities to confirm when backups reach DR

The screenshot shows the 'Channel Gateway Replication Monitor' application window. It features a menu bar with 'File' and 'Help', a title bar, and a main content area with the 'RepMon' logo and 'LUMINEX' branding. Below the header, there are search filters for 'VOLSER', 'Gateway', and 'Status'. A table displays the replication status for various VOLSERs across different gateways and storage locations. Summary statistics for connections, in-progress items, and errors are also visible.

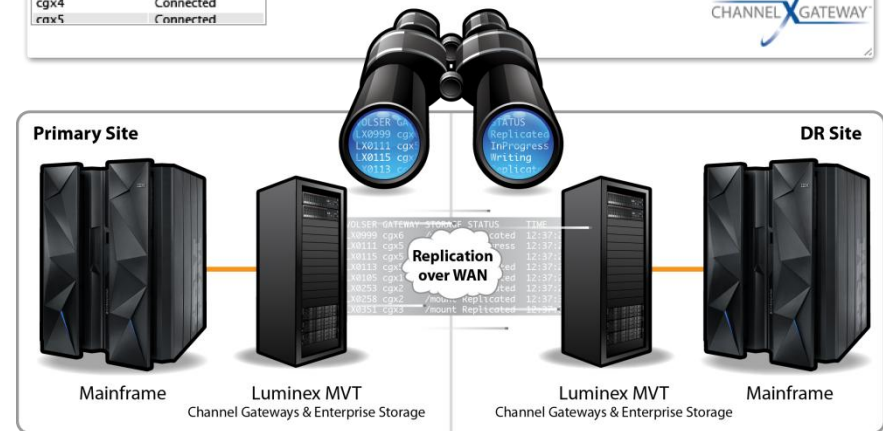

VOLSER	GATEWAY	STORAGE	STATUS	TIME
LX0999	cgx6	/mount	Replicated	12:37:23 PM
LX0111	cgx5	/mount	InProgress	12:37:22 PM
LX0115	cgx5	/mount	Writing	12:37:24 PM
LX0113	cgx5	/mount	Replicated	12:37:24 PM
LX0105	cgx1	/mount	Replicated	12:37:26 PM
LX0253	cgx2	/mount	Replicated	12:37:28 PM
LX0258	cgx2	/mount	Replicated	12:37:31 PM
LX0351	cgx3	/mount	Replicated	12:37:32 PM

Connections:

Gateway	Status
cgx1	Connected
cgx2	Connected
cgx3	Connected
cgx4	Connected
cgx5	Connected

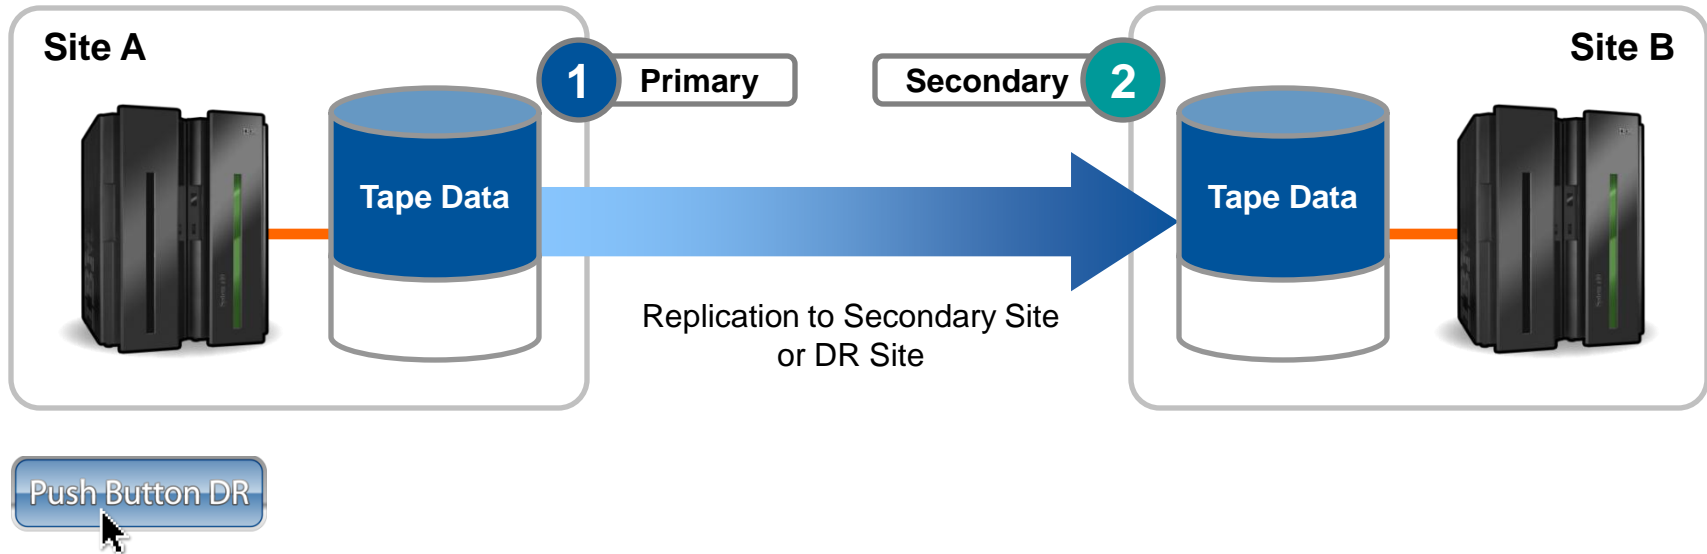

Summary Statistics:

- # In Progress or Open: 62
- # Replicated: 12,501
- # Unknown Error: 0
- Avg. Replication Time: 6.7 s
- Session Time: 128:51:20

Push Button DR Testing

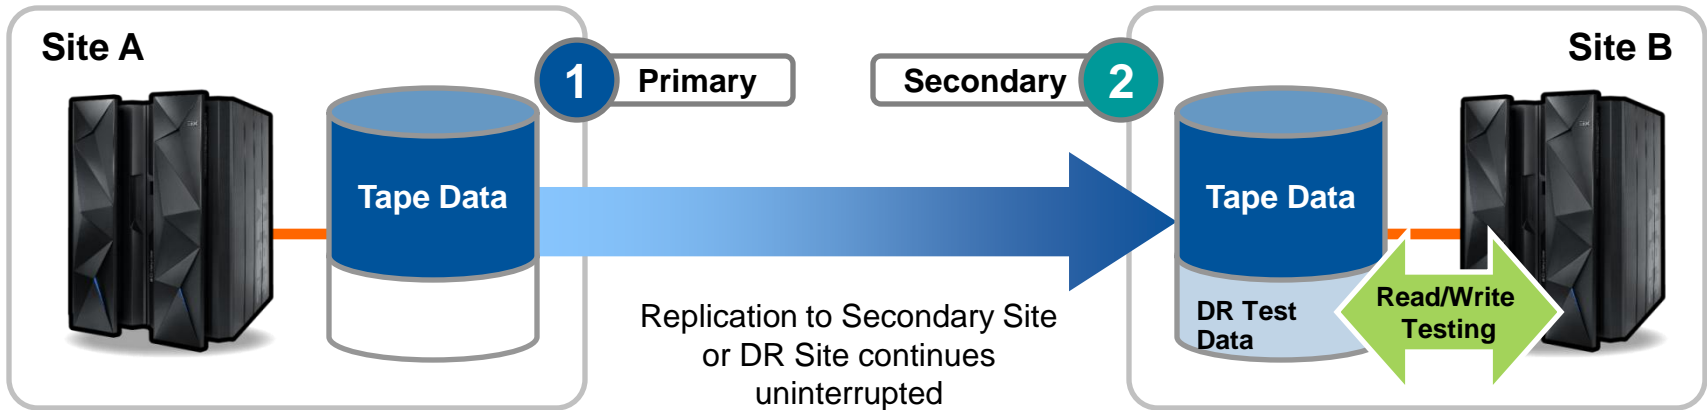

Replication During Normal Operations

Push Button DR Testing

Replication During DR Testing

Push Button DR

Prepares DR environment for read/write testing; original Tape Data remains untouched

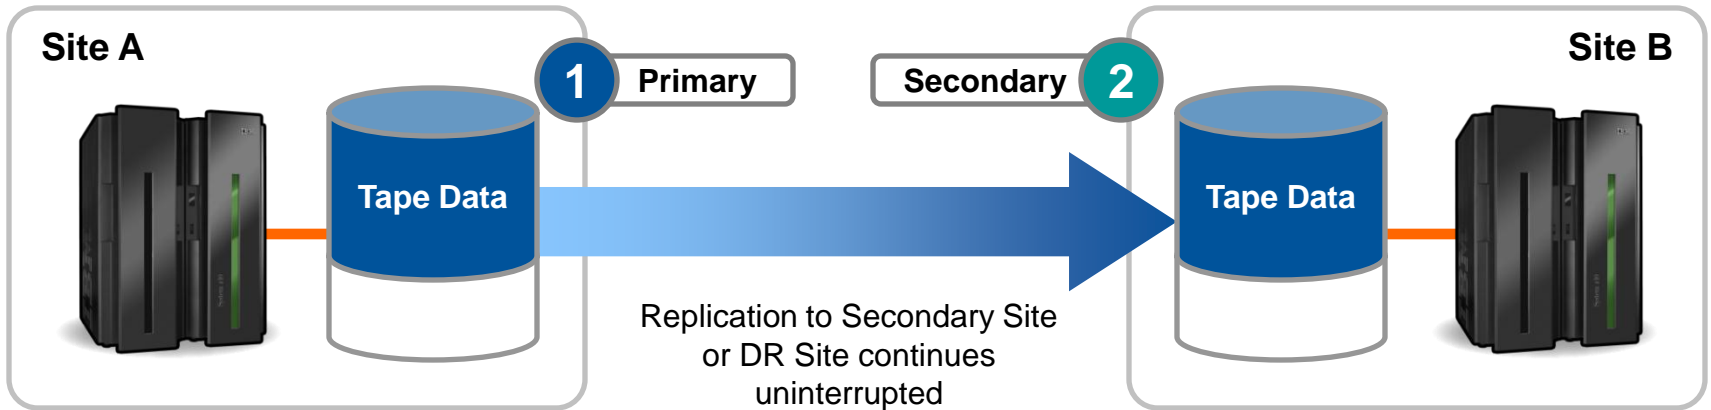

Start DR

Push Button DR Testing

After DR Testing is Completed

Push Button DR

Push Button DR

DR Test Data is purged

Optionally, DR Test Data can be automatically replicated back to Site A for auditing purposes

- **Encryption**

- Encrypt Data At Rest and Data In Transit
 - Better than simple self encrypting drives, data remains encrypted for all local or wide area network traffic, including replication
- AES-GCM or AES-ECB modes
- CGSafe solutions use AES-256, AES-192 or AES-128
- Encryption, compression, authentication and CRC in a single pass
- Configurable for auto-hardware-to-software encryption failover

- **Key Management**

- Full Key Lifecycle Management
- Optionally Integrates into existing key management infrastructure for a single-point-of-management
- Supports KMIP standard
- Dynamic creation of keys
- Master keys (KEKs) based on storage pools

Tape Migration Services and Software

- **Luminex offers Tape Migration Services to migrate to STM**
 - Elegantly designed to work with TMACS to move tape data without touching the tape catalogs
 - Current VOLSER #s and all historical information are retained in the new environment as well
 - Supports all existing tape library and virtual tape environments for z/OS
- **TMACS (Tape Monitoring and Allocation Control Software)** is optional host-based software to automate device allocation steering for complex environments

For current Luminex virtual tape environments

- Luminex offers Media Migration to non-disruptively migrate to the new storage target
- Entirely off-host, no mainframe MIPS required
- Current VOLSER #s and all historical information are retained in the new environment (no changes to tape catalogs)
- Volumes will acquire the characteristics of the new configuration

More Options... A Better Fit Makes A Better Solution

Replication
at the control unit or storage level

RepMon
Monitor replication at the VOLSER level

Push Button DR

Push Button DR
with non-disruptive DR testing

Multi-site Disposition Change
with reverse replication

MDC

Synchronous Tape Matrix
Continuous Availability

OPTIONAL FEATURES

CGSafe
Encryption and key management

LTMon
Integrated, centralized management from the mainframe console

Single source for Virtual Tape and Tape Migration

Compression
at the control unit level

Tape Monitoring (Device) and Allocation & Control System

STORAGE OPTIONS

CGX

Core product with up to 8Gb FICON, SMEs & hundreds of customers going tapeless

Enterprise storage options

Modular storage options

Deduplication
DataStream Intelligence further reduces bandwidth & storage requirements

Vault

Cost-effective replacement for physical tape vaulting

CloudTAPE

Cloud-based tape vaulting solution for mainframes

**What does the mainframe
do today that you never
thought possible?**

**What do you want the
mainframe to do in
the future?**

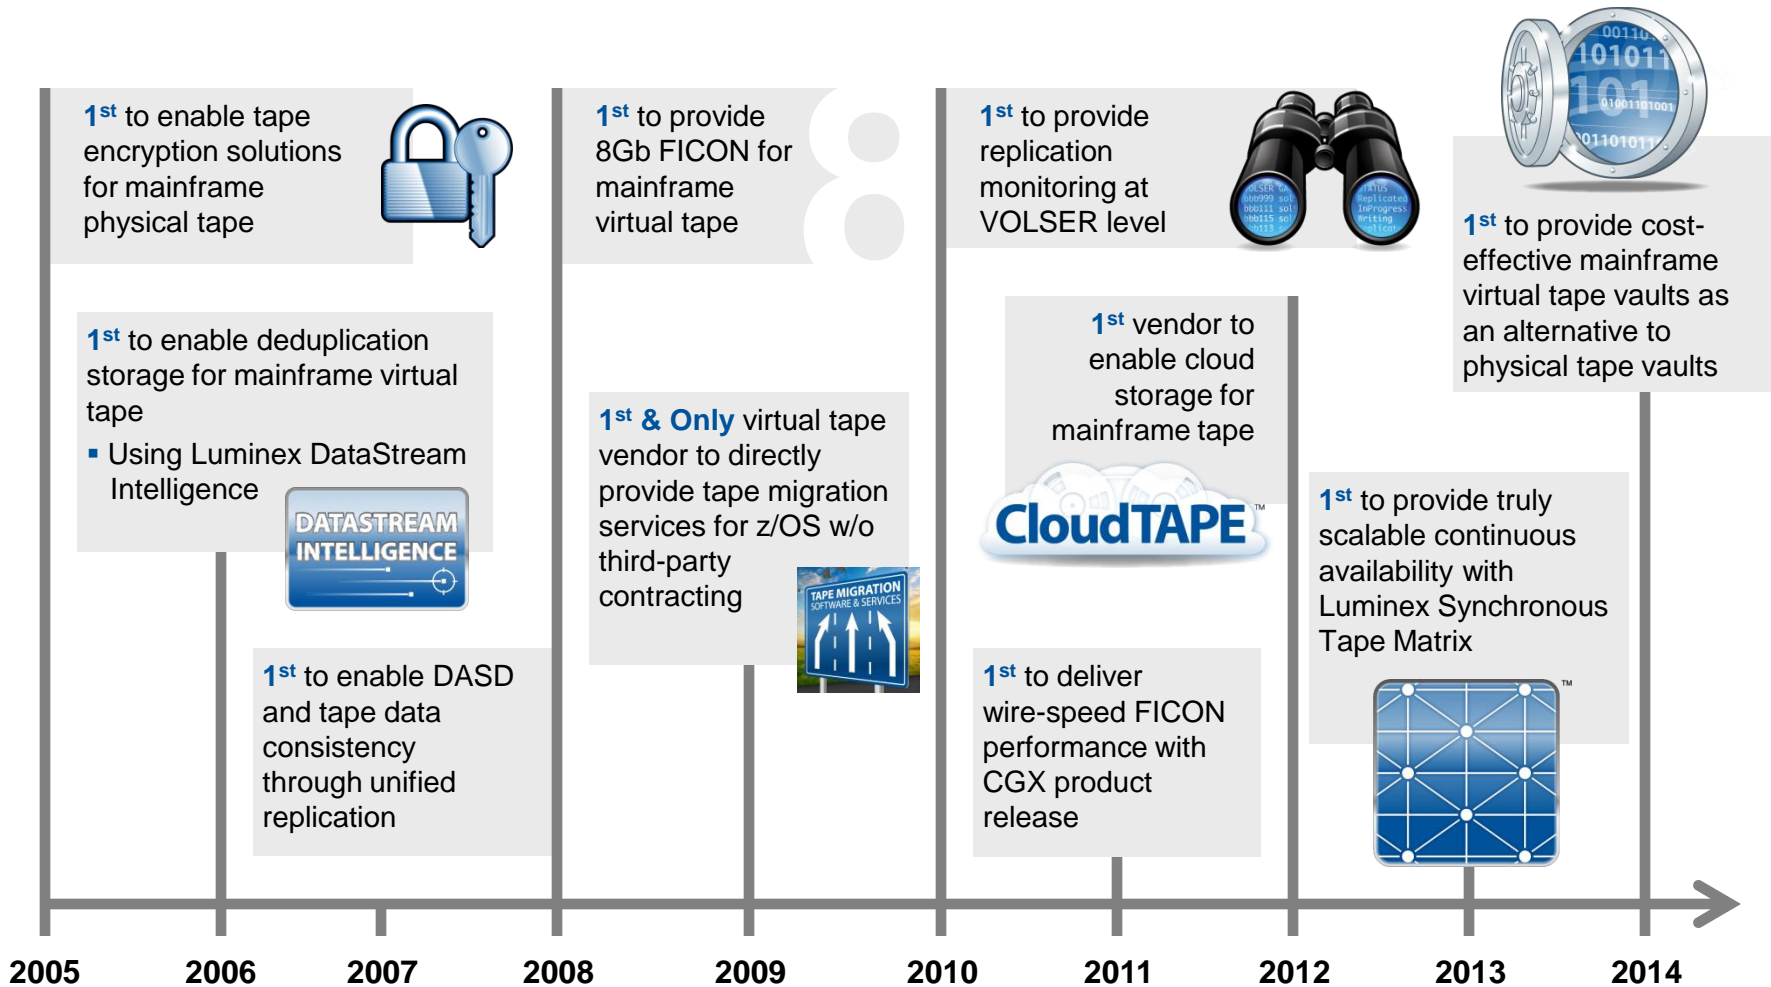

What does ~~the~~ mainframe ^{tape} do today that you never thought possible?

What do you want ~~the~~ mainframe ^{tape} to do in the future?
