EZYEDIT

- ISPF on steroids!

- Features
    - A single display to perform the most commonly used ISPF functions
    - Save up to 996 dataset names or TSO commands
        - Can be referenced by a number rather than re-typing them
    - Point-and-shoot support, enabling selection by positioning the cursor and pressing ENTER
    - Determines when a member cannot be edited and automatically switches to browse mode
    - The ability to use ISPF browse, edit and view on VSAM files
    - Tutorial allows quick access to commands
    - Batch capability

- The next few slides provide a general high level overview of EZYEDIT

Overview

- EZYEDIT has point-and-shoot help
  - The cursor can be placed on any field to obtain detailed help
  - Simplifies navigating through the tutorial panels

- A list of available commands can be displayed by placing the cursor on the primary or line command field and pressing F1 (HELP)
  - A detailed description of the command can be obtained by tabbing next to the command and pressing F1 (HELP)
  - The command can be executed by tabbing next to the command and pressing ENTER

- The next few slides demonstrate how to quickly obtain detailed help on the primary and line commands

ALTERDIR Line Command

The ALTERDIR command allows the number of allocated directory blocks to be
increased or decreased without having to reallocate the dataset. Any members
which would be overwritten during this process are first relocated, with any of
their alias entries, to an unused section of the dataset.

Syntax: ALTERDIR

Press ENTER to continue or END to Exit
