Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

RSM OA48273

- **z/OS 2.1**
- **Dirty high half of R15 after Storage Obtain/Getmain call. Depending upon the reaction of the code/subsystem/exit that encounters the dirty R15, unpredictable results may occur. This error is introduced by PE UA90976**
- **APAR is OPEN (++APAR available, also see APAR for procedural circumvention)**

SDUMP OA48046

- z/OS 1.13 and up
- Tasks taking an SDUMP with ECB remain hung after the SDUMP completes. This error is introduced by PEs from OA47148
- PTFs: UA77970 to UA77972 (tentatively RSU1508)

Red Alerts (since last SHARE)
