The following are trademarks or registered trademarks of other companies.

Adobe, the Adobe logo, PostScript, and the PostScript logo are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States, and/or other countries.

Cell Broadband Engine is a trademark of Sony Computer Entertainment, Inc. in the United States, other countries, or both and is used under license therethrom.

Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Intel Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

IT Infrastructure Library is a registered trademark of the Central Computer and Telecommunications Agency which is now part of the Office of Government Commerce.

ITIL is a registered trademark, and a registered community trademark of the Office of Government Commerce, and is registered in the U.S. Patent and Trademark Office.

Java and all Java based trademarks and logos are trademarks or registered trademarks of Oracle and/or its affiliates.

Linear Tape-Open, LTO, the LTO Logo, Ultrium, and the Ultrium logo are trademarks of HP, IBM Corp. and Quantum in the U.S. and/or other countries.

Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.

OpenStack is a trademark of OpenStack LLC. The OpenStack trademark policy is available on the [OpenStack website](http://www.openstack.org).

TEALEAF is a registered trademark of Tealeaf, an IBM Company.

Windows Server and the Windows logo are trademarks of the Microsoft group of companies.

Worklight is a trademark or registered trademark of Worklight, an IBM Company.

UNIX is a registered trademark of The Open Group in the United States and other countries.

* Other product and service names might be trademarks of IBM or other companies.

**Notes:**

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the products or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.
Agenda

- IBM Wave for z/VM
- Functionality
- Benefits
- Fit in Portfolio
- Test Drive Environment
- JumpStart Services
- IBM Wave Tiger Team
- Features and Architectural Overview
- Live Demo
Why Organizations need IBM Wave

- **Reductions in budgets** means IT needs to leverage **existing staff to do more with less**. 70-80% of IT spend goes to operations alone.

- **Managers and administrators benefit** from having tools offering self service, with easier and simpler administration.

- **z/VM® managers** find they need fast and **accurate insight** into changes in their environment.

- **Administrators need to eliminate** the continual maintenance, and increased management complexity of writing and maintaining **home grown solutions and scripts**.

- **Managers need to train staff new to z/VM** to perform complex tasks quickly and easily.

- **Linux® administrators** need to manage a powerful mainframe environment without significant z/VM skills.

---

“IBM Wave is a virtualization management tool for administrators that could reduce the administration and management of IBM z/VM and Linux virtual servers up to 85 to 95 percent.”

Robert Frances Group 2014

---

70 - 80% of IT budgets are spent on ongoing operations and maintenance costs.

IBM Wave for z/VM
Helps Simplify and Automate Virtualization Management
For z/VM and Linux virtual servers

- Automate, simplify management and monitor virtual servers and resources—all from a single dashboard
- Perform complex virtualization tasks in a fraction of the time compared to manual execution
- Provision virtual resources (Servers, Network, Storage) to accelerate the transformation to cloud infrastructure
- Supports advanced z/VM® management capabilities such as Live Guest Relocation with a few clicks
- Delegate responsibility and provide more self-service capabilities to the appropriate teams

A simple, intuitive virtualization management tool providing management, provisioning, and automation for a z/VM environment supporting Linux® virtual servers
IBM Wave - Intelligent Management for Virtualized Environments

Advanced Visualization
- Shorten the learning curve needed to manage your Linux and z/V M environment
- Organize and simplify administration of virtual Linux servers; automate and simplify management steps
- View servers and storage utilization graphically; view resource status at a glance
- Use graphical or tabular displays with layered drill down; customize and filter views
- Attach virtual notes to resources for additional policy based management

Simplified Monitoring
- Monitor z/VM system status through an innovative and interactive UI
- Monitor performance of CPU, paging devices, spool disks and more;
- Use agentless and lightweight resource discovery for an accurate and current view
- Use advanced filters, tagging, layout and layer selection to manage in a meaningful way
- Complements IBM OMEGAMON® XE used for in-depth performance monitoring and historical views

Resource Management
- Manage your system from a single workstation
- Assign and delegate administrative access using role based assignments
- Provision, clone, and activate virtual servers. Define and control virtual network and storage devices
- Perform complex management tasks such as live guest relocation using a few keystrokes
- Execute complex scripts with a single mouse click

Complete your session evaluations online at www.SHARE.org/Orlando-Eval
Agentless Resource Discovery

- Discover, manage and monitor z/VM resources and their relationships across multiple LPARs and CECs
- Identify resource and relationship changes; reflect current environment in the user interface

Monitoring

- Allows the state of resources to be observed; icons show additional content for the resources
- Use graphical and tabular displays with layered drill down to hone in on only the resources you need to view
- Perform ongoing monitoring of changes that occur after initial auto-detection

Reporting

- Automatically generate charts like pie charts to report on utilization and more
- All table-based views can be exported to a CSV file for import into other applications

Integration

- Use Automatic Guest Classification (AGC) to integrate with existing provisioning process
- LDAP/Active Directory Support for Authentication and Authorization
IBM Wave Intelligent Visualization
Quickly Understand the Status of System Resources

- Get a current and accurate view of your managed environment
  - **Network Topology**
    - Centralized view of the entire network topology per z/VM System, view Virtual LANS (VLANS)
    - Annotate network topology view to identify external resources - routers, switches, etc
  - **Linux Servers**
    - View performance gauges for all z/VM systems from one screen:
      - See resource consumption by guest or type
      - CPU, Virtual to Real, Paging, Spool
  - **Storage**
    - Visual representation of all storage resources (ECKD™ and FCP-SCSI)

- Visualize and control virtual resources
  - Views can be graphical or easily switched to tabular mode
  - View relationships between resources easily and graphically
  - View the entire environment graphically and easily zoom in

- Advanced filters, tagging, layout and layer based views for every display

| • A tool that simplifies the management and administration of the z/VM and Linux on z Systems environment via an intuitive graphical user interface | **IBM Wave for z/VM** |
Feature overview - Automation and simplification

• View the entire server farm laid out graphically

• Ordered Activation/Deactivation of servers

• Execution of customer’s REXX as part of the cloning process to allow local z/VM customization

• Run Linux shell scripts against dynamically grouped/filtered servers, as IBM Wave for z/VM background tasks, listing the results for each selected server - All via the GUI

• Run REXX EXECs against any virtual object with customized parameters and results listing - All via the GUI

• WAVECLI – A CLI for IBM Wave for z/VM actions that can be utilized from Linux shell scripts or Windows Batch files

• Access z/Linux guests directly from the GUI using SSH, 3270 or CLC – No hostnames or IP addresses to remember, simply right-click on the server and select the desired access

Complete your session evaluations online at www.SHARE.org/Orlando-Eval
Feature overview - Provisioning

• Sophisticated guests cloning including Cross System Clone (across LPARs and CPCs)

• Ability to customize the first boot of a cloned server (before TCP/IP is initialized)

• Simple creating and manipulation of Vswitches and Guest LANs

• Connect/disconnect guests to Vswitches or Guest LANs via the GUI

• Storage management and provisioning at the z/VM and Linux levels (including LVM support)

• Automatic handling of Real or Dedicated devices via IBM Wave for z/VM's user defined Device Pool
Feature overview – Network support

• Centralized, layer based view of the entire network topology per z/VM system

• Define and control all network devices such as VSwitches and guest LANs

• Manipulation of servers-to-network connect/disconnect using GUI
• Support for VLAN usage

• Management of VSwitches with protocol layer 2 or 3

• Customize network topology view with external resources such as routers, LPARs etc.
IBM Wave Requirements

**Client**
- Windows 7 Workstation
- Internet Explorer or Firefox
- Java Runtime 1.7 with Web Start Support
- PuTTY or equivalent telnet/SSH client

**WAVESRV**
- z/VM Guest or LPAR
- RHEL 6 or SLES 11
- MySQL V12.22 or higher
- Java SE Runtime 1.7
- Apache

**TVP**
- IBM System z10\textsuperscript{®} or later
- z/VM V5.4, V6.2 or higher with Systems Management API configured
- IBM Directory Maintenance for z/VM (DirMaint\textsuperscript{™}) or equivalent
- Performance Toolkit for VM\textsuperscript{™} (Perfkit, optional but suggested)

Complete your session evaluations online at www.SHARE.org/Orlando-Eval
IBM Wave for z/VM: Tier 2 – WAVESRV server

- z/VM LPAR
- API Server
- WAVESRV Server
- Background Task Scheduler (BTS)
- IBM Wave for z/VM database
- IBM Wave for z/VM GUI client
IBM Wave for z/VM WAVESRV server foundation

- **Background Task Scheduler (BTS)**
  - Employs Work Unit processing architecture for BTS worker threads

- **Knowledge Base**
  - Keeps track of the managed system components and their associated metadata

- **Common Output Repository (COR)**
  - Stores output generated by each BTS work unit

- **Message Brokers**
  - Efficiently moves messages across all system components

- **Security Enforcer**
  - Controls the scope and permission of every user action

- **Device Management**
  - Simple and automatic control of all virtual and real/dedicated devices
IBM Wave for z/VM Target Virtualization Platform (TVP)

- IBM Wave utilizes the SMAPI interface in order to mediate requests from the BTS and the GUI Client.
- Specific functions executed on the z/VM System using the following Service Machines:
  - **WAVEWRKS**
    - The Short Service Machine executes various compiled REXX EXECs to interact with the z/VM environment
  - **WAVEWRKL**
    - The Long Service Machine provides an additional thread of execution to run longer scripts or executes some directory manager commands
  - **WAVEWRKKC**
    - This Cross-System Cloning Service Machine is used to stream minidisks from a source z/VM system to a target z/VM system during cloning actions.

- As part of the auto-detection process when adding a new z/VM System to IBM Wave management, these 3 service machines are created and started on the z/VM System automatically.
Sizing

1GB RAM

Filesystems:
- /boot 100MB (approx. 100 Cyls)
- / 2GB (approx. 3000 Cyls)
- /var 3GB (approx. 4500 Cyls)

Sizing the log space areas
- By default, logs are stored in /var
  - configure the /var filesystem as a logical volume under LVM so it can be extended when needed

Location of WAVESRV server

The server is implemented as a virtual server within a z/VM LPAR.

IBM Wave Systems Management Task Example:

“Add Disk Space To A Virtual Server”

**Without IBM Wave**

1. Find requested disk space
2. Create disk definition
3. Activate definition
4. Connect storage to virtual server
5. Mount device
6. Create a File System

**View Storage at a Glance**

**With IBM Wave**

1. Open the “Add Storage” form
2. Fill the storage capacity requested
3. Press the “Go” button

**Benefits:**
- Reduce reliance on scarce skills
- Respond faster to IT customer needs
- Reduce costs
- Empower team to do more independently
- Simplify management
- Accurately depict current environment
- Reduce manual procedure errors
- Avoid problematic situations downstream

Complete your session evaluations online at www.SHARE.org/Orlando-Eval
IBM Wave Systems Management Task Example:
“Clone a Virtual Machine”

**Without IBM Wave**
1. Determine if required resources exist
2. Create clone VM definition
3. Define clone VM resources
4. Create copies of private VM resources (server)
5. Create copies of private VM resources (disk)
6. Customize clone VM
7. Authorize clone VM access / VSwitch Access
8. Add clone to management groups
9. Activate clone
10. Configure the network
11. Run middleware configuration scripts

**With IBM Wave**
1. Open the “Clone” form
2. Fill in the needed information
3. Press the “Go” Button

**Benefits:**
- ✓ Reduce time for a highly complex task
- ✓ Reduce costs
- ✓ Reduce reliance on scarce skills
- ✓ Improve speed to clone
- ✓ Simplify management
- ✓ Reduce errors associated with manual procedures
- ✓ No need to monitor every step of the process
IBM Wave Systems Management Task Example:

“Live Guest Relocation”

Without IBM Wave

- Using manual control program commands

<table>
<thead>
<tr>
<th>Task</th>
<th>Task Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Log into both z/VM instances</td>
<td>Login PBCVMA</td>
</tr>
<tr>
<td></td>
<td>Login PBCVMB</td>
</tr>
<tr>
<td>Find out which instance has the running guest</td>
<td>q HTTP2 in PBCVMA</td>
</tr>
<tr>
<td></td>
<td>q HTTP2 in PBCVMB</td>
</tr>
<tr>
<td>Verify the guest can be moved</td>
<td>vmrelo test HTTP2 to PBCVMB</td>
</tr>
<tr>
<td>Move the guest</td>
<td>vmrelo move HTTP2 to PBCVMB</td>
</tr>
<tr>
<td>Log out of both z/VM instances</td>
<td>Logoff PBCVMA</td>
</tr>
<tr>
<td></td>
<td>Logoff PBCVMB</td>
</tr>
</tbody>
</table>

With IBM Wave

- Using the GUI’s Drag-and-Drop techniques
- Or Execute via menu selection
IBM Wave for z/VM Tested Productivity Savings*

IBM Wave is designed to help automate and improve the productivity of many administrative tasks. Tests were run on a zEnterprise processor both with and without the IBM Wave interface**.

<table>
<thead>
<tr>
<th>Tasks</th>
<th>Manual Times in seconds</th>
<th>With IBM Wave Times in seconds</th>
<th>Reduction in time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clone a Guest Linux Server</td>
<td>576</td>

Complete Solution for administration and management of the z/VM and Linux on z Systems environment

**IBM Infrastructure Suite**

**Linux on z Systems**

- OMEGAMON XE on z/VM and Linux
  - Performance monitoring of z/VM and Linux guest

- Tivoli Storage Manager
  - File Level backup and recovery for Linux Virtual Machines

**z/VM**

- Wave for z/VM
  - Simple, intuitive, graphical z/VM management tool

- Operations Manager for z/VM
  - Facilitate automated operations, take action based on events

- Backup and Restore Manager for z/VM
  - Backup and restore full z/VM environment

Gain the Competitive Edge
Enterprise Linux Server includes IBM zEnterprise® hardware, hardware maintenance, IBM virtualization and management software components and software support & subscription.

- **Hardware options**
  - IBM zEnterprise server
  - 32 GB memory
  - Connectivity
  - S&S

- **Virtualization software**
  - IBM z/VM Version 6
  - z/VM basic features:
    - Dirmaint™, RACF®, Performance Toolkit for VM™, RSCS
  - **NEW! IBM Wave for z/VM included**
  - 3-5 years S&S
  - **Note:** Linux ordered from Red Hat or SUSE

**Enterprise Linux Server**
Includes IFLs, memory, I/O adapters, z/VM software including 3-to-5 years of S&S, and maintenance

**Solution Edition for Enterprise Linux**
Acquire incremental Linux CPUs (IFLs), memory, z/VM software and 3-5 years of subscription and support, and maintenance.

1. 28-32 GB memory on zBC12, 24 GB memory per core up to 5 IFLs on z114.
Enterprise Cloud System (Pre-configured and integrated system)

- **Server:**
  - IBM zEnterprise® EC12 or IBM zEnterprise BC12 (zEC12, zBC12)

- **Storage:**
  - IBM DS8870 or Storwize® V7000

- **Software:**
  - z/VM® 6.3 with following features:
    - Directory Maintenance (DirMaint™) Feature
    - Resource Access Control Facility (RACF®)
    - Performance Toolkit for VM™ Feature
    - Single System Image (SSI) Feature –
      - (Requires ECKD DASD)
  - IBM Wave for z/VM
  - Cloud Management Suite:
    - OMEGAMON® XE on z/VM and Linux
    - Tivoli Storage Manager
    - SmartCloud Orchestrator
  - Operations Manager for z/VM
  - Backup and Restore Manager for z/VM

Complete your session evaluations online at www.SHARE.org/Orl
FCP/SCSI Support

- IBM Wave always supported FCP/SCSI environments.
- IBM is very committed in enhancing IBM Wave’s support for FCP/SCSI-only environments.
- New and important functionality was made available on IBM Wave FCP/SCSI-only environments on July/2014 (eDEV support)
- IBM will keep investing on IBM Wave to continue to develop its capabilities not just on FCP/SCSI-only environments, but across the entire product.

- IBM Wave absolutely supports FCP/SCSI!
FCP/SCSI-only environments

- Specifically for direct attached SCSI disks:
  - Visualize disks
  - Add disks to guest
  - Create partitions
  - Create/extend LVM volume group and logical volume
  - Create/resize new file system

- At GA in February/2014:
  - The IBM Wave installation itself was possible, requiring one to manually create the IBM Wave service machines prior to installing the IBM Wave RPM. Note that IBM Wave utilizes EDEVs for its own disk space.
IBM Wave Enhancements Since V1.1

- Easier to customize IBM Wave for your site
  - Use additional Exits for site-specific configuration

- More extensive support for Linux distros
  - Red Hat Enterprise Linux (RHEL) 7
  - SUSE Linux Enterprise (SLES) 12
  - Bare Metal Install for SLES10, 11 and RHEL5, 6 + Layer 2 Network support
  - Ext4 File System Support (RHEL6 only)

- Improved FCP SCSI device support
  - Enhanced storage support for
    - FCP SCSI-only environments using EDEVs
    - Richer EDEV support
    - SAN (FCP/SCSI) improved support for direct attached FCP devices
  - Expanded management from a central point of control

- Easier to get started with cloud
  - Enhanced Cross System Cloning

- Easier serviceability and support
  - LDAP configuration checker
  - Improved Auto-detection
  - First Failure Data Capture to help capture diagnostics to aid in problem resolution

- Strengthened security and audit
  - Verisign authenticated code signing certificates
  - Mixed case password support
  - Additional audit records generated
  - Supports your LDAP configuration
### IBM Wave Enhancements Since V1.1

<table>
<thead>
<tr>
<th>Feature</th>
<th>Details</th>
</tr>
</thead>
</table>
| Generate reports on demand, using customized data | - Improved Flexible Reporting Capability with many new data points for richer report content  
|                                              | - Export reports as needed to CSV or other formats                     
|                                              | - Automatically provides current view of environment                   |
| SoD for Audit                                | - SOD for enhanced audit logging                                       
|                                              | - Allows an IBM Wave administrator to satisfy corporate auditing needs by accessing a consolidated log of auditable activities. |
| SoD for IBM Wave Server                      | - IBM intends to support the installation and execution of the IBM Wave server (IBM WAVESRV) on Red Hat Enterprise Linux (RHEL) 7 and SUSE Linux Enterprise Server (SLES) 12 distributions |

**IBM Wave offers increased automation and simplification around management of virtual Linux environments on z Systems**
New IBM Wave V1.2 Enhancements

• Reporting enhancements
  o Users can now create customized reports on resources managed by IBM Wave

• Support of latest Linux distributions*
  o Red Hat Enterprise Linux (RHEL) 7
  o SUSE Linux Enterprise Server (SLES) 12
# New Reporting Capabilities

## Business Value

<table>
<thead>
<tr>
<th>Obtain the current and specific information you need, on demand</th>
</tr>
</thead>
<tbody>
<tr>
<td>Handle report management workflow with ease</td>
</tr>
<tr>
<td>Create reports on demand in a self-sufficient manner</td>
</tr>
</tbody>
</table>

## How

- **Generate accurate inventory of your environment**
  - Customize reports with filtering and tagging
  - Discover unused resource
  - Easily manage and report on resources using detailed templates

## Benefits:

- Provides visibility into your z/VM systems whenever you need it
- Templates and Customization to help you create detailed reports for more meaningful content
- Uses IBM Wave’s scopes and permissions to restrict unauthorized access
- Export reports (e.g., CSV format) for further analysis and reporting workflow and get it documented
Business Need:
North Carolina Farm Bureau Mutual Insurance Co., Inc. (NCFBMIC) wanted to improve its server-cloning methodology. The goal was to provide management with a status dashboard and to be able to delegate server on/off functions to server administrators.

Solution:
NCFBMIC engaged IBM Systems Lab Services and Training to implement IBM Wave for z/VM software in order to simplify the administration and management of its IBM z/VM hypervisor-based servers. The Systems Lab Services and Training team provided onsite expertise to help the client install, configure and deploy the Wave for z/VM software and provided skills transfer and advice on using the software.

Benefits of the Solution:
By engaging IBM Systems Lab Services and Training to implement IBM Wave for z/VM software, NCFBMIC gained the ability to clone its server environments quickly. In fact, the client reduced server deployment time by more than 83 percent, from 1.5 hours to 15 minutes, and the time it takes to add disks to an existing server by more than 93 percent, from 30 minutes to as few as two minutes. With the software in place, the client gained immediate insight into the overall status of its systems. The client’s management team was extremely happy with the insights into the status of the system, especially system performance and the numbers and types of virtual servers. The client’s limited skills with the IBM z/VM hypervisor were immediately amplified by use of the Wave for z/VM software.

Client Quote:
"The biggest benefit I see from the IBM Wave software is the reduction in time it takes to deploy a server. Users think I’m preallocating servers for them, I can create them so quickly. If the users want to think I’m a wizard, I won't disagree. "IBM Wave software has made my job significantly easier. Pushing out updates is incredibly easy. I really like the monitoring dashboard and displays; I keep the dashboard open on my desktop at all times. What used to take minutes now takes seconds, such as adding a storage volume. The impact it has on the tasks it automates has been enormous."
--Justin Randall, systems programmer, NCFBMIC

Any public use, such as in marketing materials, on WWW sites, in press articles, etc., requires specific approval from the client. It is the responsibility of the person or any organization planning to use this reference to make sure that this is done. The IBM representative will, as appropriate, contact the client for review. You should not contact the client directly. Primary contact information:
Garry L. Grandlienard - zClient Architect – USA - glgrandl@us.ibm.com
Learn More with IBM Wave Client Hands on Experience

STG Lab Services – IBM Wave Jumpstart Services for zEnterprise

- This Jumpstart service can help to accelerate your IBM Wave implementation.
- This service offering provides planning, installation, and usage assistance.
- We tailor the installation to your environment and provide skills transfer by reviewing common use cases of the interface with your support staff.

Key Features:
- This service helps accelerate the implementation and ROI with IBM Wave
- Assistance in planning the implementation by those who have implemented and used for several years
- Provide recommendations on integration and configuration in your environment
- Demonstrate how to implement custom REXX™ Execls with IBM Wave to extend functionality
- Integration with your AD for authentication
- Demonstration and review of common IBM Wave use cases with your staff in a workshop setting
- Demonstrate how to enable existing Linux servers to be managed by IBM Wave

The Jumpstart is usually typically complete in one week depending upon the size of the deployment

Our z Systems experts have years of experience in working with IBM Wave

Target Audiences:
- zEnterprise z/VM and Linux Administrators
- Existing and First in Enterprise customers
- Organization who want augment the z Systems support staff with less experienced IT professionals

Business Drivers:
- Reduced staff z/VM experience requirements
- Increased IT staff productivity
- Reduce systems management costs

Contact:
- stgl@us.ibm.com for questions specific to this service.

Top Reasons Why you Need IBM Wave

- Does your company need to simplify advanced virtualization functions?  
- Do you need to accelerate the productivity of less experienced staff?  
- Would you like the convenience of reporting capabilities without having to navigate to another product?  
- Would it be convenient to easily visualize configuration and status of virtual guests?  
- Do you ever need to limit authority to effect resource changes to certain staff?  
- Could you use automatic notifications to alert staff from performing certain operations during critical periods?  
- Would you like to be able to perform easy drag and drop connections, like connecting z/VM to a virtual network?  
- Can you group and filter virtual resources and manage them in a way that is meaningful to your users?  
- Would you like to perform complex tasks like LGR in seconds?  
- Would you like to simplify the capturing and cloning of virtual Linux guests in a few clicks? Would you like to be able to customize cloning and add scripts?  

Would you like to do all of this with one product?
