z Systems - It’s Been a Bumpy Ride

Paul R. Robichaux
Thursday, August 13, 2015
10:00 AM - 11:00 AM, Dolphin, Europe 2
Session 17788
Abstract and Speaker

• One of the primary missions of those charged with the responsibility to enhance and sustain the operational availability and integrity of the z Enterprise and its z Systems is to maintain their currency in both overall IT Server Market Trends and changes that specifically impact the z/OS environment. Such individual currency helps organizations adapt their IT strategies in ways that best fit the needs of all IT users and aids them in their long term effort towards reducing the Total Cost of z Systems Ownership (zTCO).

• This presentation, an update to one presented at SHARE in San Francisco and the IBM zUniversity in New Orleans in 2012/13, will provide fresh insight into the “Ups and Downs” experienced by hardware, software and business service providers as they manage the shift to “Hyper-Scale”, increasing Cloud-based Systems of Record, all in an effort to satisfy the apparent, insatiable demand for service that is resulting from the never ending introduction of global systems that intend to engage users at every possible commercial and/or social entry point.

• Paul R. Robichaux is CEO and co-founder of NewEra Software, Inc. He served as the Chief Financial Officer of Boole and Babbage for the ten years immediately preceding his co-founding of NewEra in 1990. He holds a BS in Accounting and a Masters in Business Administration from a Louisiana State University and is a Certified Public Accountant.

• The corporate mission of NewEra Software is to provide software solutions that help users avoid non-compliance, make corrections when needed and in doing so, continuously improve z/OS integrity.
Hello! My name is Paul.

I am a Mainframer
and
Very proud of it!

I like to think of myself as
a citizen
in the z Community!

Critical Success Factors:

- Total Cost of Ownership
- System Performance
- The User’s Trust

Failure Results in Disintermediation:

“Disintermediation occurs when a buyer, having connected with the seller, circumvents the platform and talks to the seller, eventually doing her deal directly with that seller. As a result, the platform owner is then unlikely to get her revenue share. This may be considered a new form of disintermediation.”

4/2011 - The Open Compute Project
http://www.opencompute.org

“(OCP), one of the most important tech projects Facebook has ever created. OCP began in 2012 as a radically new way to build and buy computer hardware. It creates free and "open source" designs where anyone can contribute to the designs and use them for free, ordering them from a contract manufacturer.”

Liked by: Microsoft, Intel, Goldman Sachs, Rackspace and others.

Adapting to Predicted Realities
Everybody knows “IoT” is Coming Soon!

http://time.com/539/the-next-big-thing-for-tech-the-internet-of-everything/

“There is a lot of hype around IoT these days. Here are some important things to know...”

“...IoT is expected to generate large amounts of data from a diverse set of devices and locations, thereby increasing the need to better data indexing, storage and processing.”

“...estimated at $5.0 Trillion it will have a dramatic impact on everything from city planning, first responders, military, health and other...”

What is The Internet of Things (IoT)?
Adapting to Predicted Realities

Everybody Knows Customers Won’t Wait

\[ \text{The Queue} = \frac{1}{1 - \text{Utilization}} \]

How Long they Wait = The Queue X The Service Rate

The Theory of Queues
Everybody knows Moore's Law is DOA

“...halving of the dimensions and doubling of speed of chips every 18 months--will run out of steam very soon - for certain in 10 years?”

“Only a very few high-end chip makers today can even afford the exorbitant cost of next-generation research and design, much less the fabrication facilities needed to build them.”

Two wolves: one good one bad; Which one do you feed?
Adapting to Predicted Realities

Everybody knows We’ve Hit the Wall

Adapting to Predicted Realities

 Surprise! Moore’s Law? Not dead just yet!

Tiny Tiny Chips
Adapting to Predicted Realities

Surprise! Moore’s Law? Not dead just yet!

According to IBM, the alliance with GlobalFoundries, Samsung and others achieved a scaling improvement of nearly 50% over the currently most advanced technology, as well as introducing silicon germanium (SiGe) channel transistors and extreme ultraviolet (EUV) lithography integration.

IBM believes that the techniques and scaling could result in a 50% power-to-performance improvement in next generation mainframe and systems that power big data, cloud and mobile computing.

It is ironic that IBM had to pay GlobalFoundries $1.5 billion to take ownership of its chip-making facilities in upstate New York. The transfer completed just last week. GlobalFoundries now owns chip-making plants in East Fishkill, N.Y., and Burlington, Vt., along with 16,000 patents, IBM’s former chip customers and a 10-year contract to supply Big Blue with chips.

Why Tiny Chips Matter
5/2015 - Avago’s $37 B Broadcom Deal

The Deal and the Details

“…the largest deal ever in the $300 billion semiconductor business. The combined company will have the most diversified communications platform in the semiconductor industry…”

“…deal creates new competitive challenges for Qualcomm and may force the world’s largest mobile chip maker to radically rethink its own strategy.”

Who is Avago?

In April, IBM announced its 12th consecutive quarter of declining revenue, with sales of $19.6 billion coming in 12% lower than the year before.

Growth in its cloud services and analytics tools aren’t enough to offset the declines the company is facing elsewhere. 46 Cloud Data Centers to be in place by EOY 2015, half based overseas.

Any lift IBM could receive from its recent slew of acquisitions and “BFF” partnerships is unlikely to have significant impact on its revenue anytime soon.
